For one thing, a man who has so many goods to sell as I have will not take much time to look up news items, even if he has no more conscience than I am laden with. News is "off crop," too. But all the local stand-bys know that Paul E. Richwagen, one of our best liked young growers, went out to New-ham a year ago and leased a plot of land with 16,000 feet of glass, a large, old-fashioned colonial mansion and out-buildings. Sunday morning one of his children awakened him at 3 o'clock calling for water and he found the house so thoroughly in a flame that the inmates, ten in all, barely escaped in their night clothes. Paul was fairly well insured on his household goods, so if there is no hitch in settlement he will not lose very heavily, as the flames were confined to the dwelling house of which a good, clean job was made.

J. S. MAXYER.

PHILADELPHIA.

The Market.

There are many occasions which raise the spirits of some of us to a high pitch—when a new greenhouse, a marble-tiled lexos or a trip across the great big pond seem within easy reach. There are just three occasions when the spirits of all of us, great and small, soar so high. They are at Easter, at Christmas, and during the pre-Lenten rush. We are now in the thick of the gaieties that are so closely crowded together just before Lent.

The market is buoyant. A well known retailer aptly described mid-winter conditions by saying that the people who bought flowers then did so because they wanted them and not because they were cheap. They are not cheap now. Beauties of the special grade, large, perfect blooms borne erect on four foot stems, bring 80 a dozen. They are very, very scarce. Medium grades bring from \$4 to \$7.50 a dozen; short stems, \$2 to \$3 a dozen. The purchasing power of \$2.50 was on one occasion lately only equal to one dozen Beauties actually blue from age or cold, and with only twelve-inch stems. Such stories are too sad and I refrain.

Brides and Bridesmaids of first quality bring \$12 a 100, a few \$15, but more \$8 and \$10; they are now fine and sell well. Carnations are coming in in great shape; \$2 to \$1 a 100 is in the price for "good ordinaries." White is in brisk demand and in the hands of the skillful manipulator bring a cent more for each bloom than the colored ones, at least once during the week. Violets continued rather quiet; \$1 a 100 was a good price for doubles, many changed hands at lower

figures; for singles 35 to 50 cents a 100 was asked.

Tulips are in their glory now. Besides the standard sorts, which can be had in quantity, several fancy varieties are seen in limited numbers, adding a wealth of rich color. Very few red tulips are in the market; various shades of pink and white are most plentiful; yellow and variegated complete the list. Price \$3 to \$4 a 100. Daffodils, both double and single, are improving. Good Von Son, such as were seen here five or six years ago, are however missing. Those brought \$6 and even \$8 a 100 then, and were worth it. Now they are smaller, and the growers say less reliable; \$4 a 100 is the price. Single daffs bring the same figure and a larger sort \$5.

Freesia is on the wane, though not scarce yet. It is gotten up in fine shape, large flowers with wondrous stems that bear their fragrant blossoms proudly erect. Valley is improving and selling well. Greens are scarce, smilax and asparagus being pretty well cut out; the demand is brisk.

The events of the week were the mid-winter and several other balls, including one given by the married ladies. The club meeting was held on Tuesday. Charles W. Cox read a paper on ferns for ferneries, giving the best varieties for the purpose.

PULL.

CHICAGO.

The Market.

The supply of roses has increased somewhat and prices are a little easier, first-class teas going at \$6 to \$8 with only an occasional sale of a few special selects at as high as \$10. Of the lower grades the supply is large and prices grade down to almost nothing. Good ordinary carnations range from \$1 to \$1.50 with fancies at \$3. We hear of some sales of extra fine at \$4, but the majority report \$3 as top price obtainable. And of poor stock sales are made as low as 75 cents. There is a considerable increase in the number of poor grade carnations in the market.

There is an abundant supply of bulbous flowers and they move slowly. The finest tulips bring \$4 and poor ones in job lots range from \$3 a hundred down to \$1 a barrel, according to one dealer. Daffodils, paper whites and Roman hyacinths move very slowly.

The shipping trade is the backbone of the market, local call being unpleasantly light for the season and not nearly equal to last year at the same period.

There is some complaint regarding delay in shipments of cut flowers, due to the heavy snow storm, and some losses have resulted.

Violets are still in the dumps, and prices on any except the very best depend upon the sort of an offer the dealer can get. One wholesaler holds out a ray of hope for the violet grower by expressing the belief that the violet will be in as good demand as ever when weather conditions permit the wearing of violets on the street.

Klein's novelty tulips are arriving at Krombreef's and they are strictly first-class.

Various Items.

At the meeting of the Florists' Club tomorrow (Friday) evening a paper is expected from Mr. E. Buetner on grow-

ing mignonette, and one from Edwin Kanst on the best bedding geraniums.

The recent heavy fall of snow has caused growers considerable trouble and expense. Some have had to have gangs of men dig out the snow that accumulated between connected houses. Bassett & Washburn fitted their coal wagons with bob-sleds and have made the haul much easier in that way.

McKellar & Winterston have put in a stock of cloth artificial flowers and plants which are now largely used by window trimmers. They are also having new signs made for the front of their store.

There was an inquiry in the market last Tuesday for "tann" smilax.

Wm. Hagenmann, of Hagenmann & Meyer, New York, was a recent visitor.

Mr. and Mrs. O. P. Bassett are at Palm Beach, Fla., and Mr. B. reports that the thermometer registers 90 degrees in the shade there.

John Zech was unfortunate enough to be laid up again last week. He has certainly had more than his share this winter.

Chicago to Baltimore.

A number of those expecting to attend the Baltimore convention of the American Carnation Society next Thursday and Friday have arranged to take the train leaving Chicago at 11:45 p. m. Tuesday, Feb. 19, on the Pennsylvania railroad, which arrives at Baltimore at 6:35 a. m. Thursday. The fare is \$17.50 each way.

Any one in the trade desiring to join the party is cordially invited to do so. Berths may be reserved by addressing the ticket agent of the Pennsylvania Lines, 248 South Clark street, Chicago. Those who have already reserved berths are N. Wietor, Jas. Hart-horne and G. L. Grant.

ST. LOUIS.

The Market.

Business has been quite brisk the past week. There was not any great scarcity of stock, yet it moved quite lively. Really first-class roses are very scarce and the commission men complain that orders have to be filled with second-class stock. Shipping orders have been coming in heavily the past week, which are promptly filled by our commission men.

The weather has been most favorable. This morning (Monday) we are having a fall of the "beautiful."

Prices opened this week a little higher. The standard varieties in roses, such as Brides, Meteors, Maids and Perles are from \$5 to \$8. Beauties keep scarce at \$1 per doz. for the best, and from that down to \$1 for short-stemmed ones.

Carnations keep coming better all the time and some extra fancy stock, which brings \$3, is seen at the commission houses. The standard varieties are \$2.50 and \$2 per 100. Daybreak, Scott and all white have the best call at present.

Bulbous stock was better the past week. Romans are becoming a glut and are selling as low as \$1.50 per 100; free-las \$2, but not overplentiful; daffodils, \$3; tulips are going slowly; Harris-his have made their appearance and sell at \$2 per doz.; callas, \$10 and \$15; valley always in demand at \$4 for the best.

Violets are about the same as reported last week, only not so plentiful; price remains the same. The same can be said of smilax.

Various Notes.

Complaint was made the past week by owners of lots in Calvary Cemetery that metal wreaths and floral emblems which were placed on graves were removed at once without notice to owners. In an interview with Mr. George V. Emory, secretary of the Calvary Cemetery Association, he said: "The rules of the association prohibit placing decorations on the graves, and hereafter they will all be removed at once without notice."

By request a bill was introduced last week in the city council to authorize the park commissioner to designate certain boulevards and avenues on which trees shall be planted. The bill stipulates that the park commissioner may specify in October of each year the districts in which trees shall be planted the following year. In order that, so far as possible, different species of trees may be planted, the commissioner is to have the power of selection for each district. He shall also state how far apart trees shall be planted and in general shall supervise the work. Persons who may be engaged to do the planting will have to obtain from him a certificate of competency. Moreover, he shall give advice and directions looking to the preservation and the protection of the trees.

Prof. Trelease lectured on "A Botanist's impressions of Mexico" last Friday before the Washington University Association.

Will Hucke, of Belleville, is sending a fine lot of carnations to this market every day. His Flora Hills are exceptionally fine.

Joe Heint, of Jacksonville, Ill., is sending in some fine roses. A few of his Golden Gates this week had 54-inch stems.

Winifred Whitman, with Frank Ellis, was all smiles last week. It's a girl and Whit is receiving congratulations every day.

Joe Rolker, of New York, is a visitor, calling on the trade with supplies of all kinds.

On March 1 Fred Foster will move from 8th and Olive to 1000 Olive street.

The Jos. F. Diekmann Seed Co. have changed the style of the firm to Diekmann-Dusard Seed Co. They will do business at the same old stand.

E. W. Guy, Henry Enmund and Dr. Halsted, all of Belleville, are shipping first-class stock of all kinds to this market.

Sanders Nursery, of this city, captured three out of the four orders for trees and shrubs for the water department for the new Chain of Rocks Park, amounting to \$800. The other order went to J. K. Derker, agent for Augustine & Co., Normal, Ill.

J. J. B.

NEW CARNATIONS.

Registered with the American Carnation Society.

By L. E. Marquisee, Syracuse, N. Y.—"The Empire State." Color, pure white; size, three to four inches; calyx perfect; stem strong, two to three feet; substance exceptionally good; form, full double and well built up and very fragrant. Habit, ideal, making only flowering wood; growth vigorous and quick. Free as a carnation can be, early and continuous.

By W. S. Nichol, Barrington Center, R. I.—"Wild Rose." Color, pure pink,

Special Bargains.

Send us your list for special quotation. Our wholesale price list just out. Write for it to-day.

THE GOOD & REESE CO.,

THE LARGEST ROSE GROWERS IN THE WORLD. SPRINGFIELD, OHIO.

Mention The Review when you write.

of a clear wild rose color. Very early, free and continuous bloomer. Habit of plant compact and upright, with strong, stiff stems and perfect calyx. Flowers two and three-quarters to three inches, and one of the greatest producers of any commercial variety grown.

By John Kulms, Philadelphia, Pa.—"John Habermehl." Color, dark pink or red; a good sized flower on a good stiff stem, and with a calyx that does not burst. Habit of plant all that could be desired and an early, free and continuous bloomer.

By Frederick Specht, Rochester, N. Y.—"Mrs. Margaretha Behn." Color, a beautiful light pink; flower of good size with a good calyx and a stiff, strong and long stem. "Miss Meta Behn." Color, light pink; large flower on a long and stiff stem and with a perfect calyx. "Miss Flora Specht." Color, bright red or scarlet; a good big flower and a very strong stem and a non-bursting calyx.

Do not forget the meeting at Baltimore, Md., Feb. 21st.

ALBERT M. HERR, Secretary, Lancaster, Pa.

SPRINGFIELD, MASS.—At the meeting of the Amateur Horticultural Society, Feb. 1, Mr. H. F. Burt, of Taunton, delivered a very interesting and instructive address upon the dahlia, speaking for two hours upon its history and cultivation. Last fall Mr. Burt had a fine display at one of the meetings of the society and the members desired to hear from him as to methods of culture, etc. Previous to the lecture a short musical program was furnished. Rev. W. T. Hutchins will speak at the meeting of the society to be held in March.

HELENA, MONT.—Chas. O. Horn reports business as good and that he can hardly supply the demand. The state legislature is in session here for two months, which makes trade lively.

We are headquarters for the following, except where noted:

- Hibiscus, 19-20ths, \$2.50 per 100.
- Hibiscus, 21-30ths per 100, \$2.00 per 1000.
- Ponderosa Lemon, bear fruit low priced and up an ideal pot plant. 10 blooms and 1000 flowers, \$1.00 per 100, \$1.00 per 1000.
- Uttahete Orange, \$4.00 per 100, \$5.00 per 1000.
- Moon Vines, \$4.00 per 100.
- King of the Indies, 19-20ths, \$2.50 per 100.
- Salvia, \$2.00 per 100, \$1.75 per 1000.
- Salvia Splendens, \$2.50 per 100.
- Lemon Verbena, \$2.00 per 100.
- Lavender, best class bulbs, 75c per 100, \$6.00 per 1000.
- Roses, all the leading variety. Teas, Hybrid Teas, Climbers, from 25-inch pots, \$2.50 per 100. Hybrid Perpetuals, \$4.50 per 100.
- Strong roses from 1-inch pots. Teas, 2c; Hybrid Teas, 10c. Climbers and Hybrid Perpetuals, 12c.

LETTUCE. Big Boston and Boston Market, and other varieties, 7c per 100, \$1.00 per 1000, \$1.50 per 10000.

If by mail add 10c per 100.

CABBAGE. Wakefield and Succession, 25c per 100; \$1.25 per 1000. 11 by mail add 25c per 100.

TOMATO. Dwarf Champion and Lorillard, 50c per 100, post paid. Nice size for potting.

CAULIFLOWER. Snowball, 35c per 100. Cash with order. Other Vegetable Plants, also Flower Plants. Seed for list.

E. VINCENT, Jr. & SON, WHITE MARSH, MD

Shipping Flowers and Plants can be done as such should be done only by using the "Meteor" Tag or Label for Flower trade, and the "Geranium" Tag or Label for Plant business. In natural colors. Samples free.

INDIANAPOLIS, IND.

Trade has been very good all round lately, and good stock of all kinds has found ready sale at fair prices. A great deal of cloudy weather lately has kept the supply from getting ahead of the demand; and even the poorer grades have been used up well in funeral work, of which there has been a good deal on account of the heavy death rate in this city in January and the first week in February. The grip seems to have had a grip on nearly everybody and many were gripped a little too tightly.

Florists' Meeting at E. A. Nelson's.

The State Society of Indiana Florists met Feb. 5 at E. A. Nelson's place and a large attendance was brought out, for two reasons: viz., the making out of a premium list for the fall show and the promise of Mr. Nelson of a good time. The premiums this fall are to be liberal and figure up to about \$1,100.00, and they alone ought to bring some fine stock to the show. Everybody seems determined that this shall be a successful show and if this spirit is kept up it certainly will be. Mr. C. F. McVey was elected to membership.

At 10:30 Mr. Nelson took us over to the house and filled us up in good shape, but as good as the refreshments were, a vase of Bridesmaid roses and two vases of his pink seedling carnation, named in honor of his estimable wife, were better. It is a seedling from Armazindy crossed with Scott, and is best described as a giant Scott. The growth is as strong as Armazindy, but more upright, and before we departed he gave us each a bloom.

Mr. A. Wiegand, who had shortly returned from Cuba, was called on for a speech. He thinks Cuba would make a good palm growing country if white men lived there, but not, he said, we should remember that we are living in God's country and stay away from Cuba.

Messrs E. G. Hill and J. A. Evans, from Richmond, and President J. A. E. Haugh, from Anderson, were present.

A. B.

LITTLE ROCK, ARK.—At the recent annual meeting of the Arkansas State Horticultural Society an interesting lot of papers were read and it was decided to ask the state legislature for a \$2,000 appropriation. Officers for the ensuing year were elected as follows: Pres., John P. Logan, Siloam Springs; Vice-Pres., S. H. Nowlin, Little Rock; Sec'y., W. K. Tipton, Little Rock; Treas., Job Vestal, Little Rock.

DES MOINES, IOWA.—Frank E. Pease has bought the seed farm and business of F. S. White and will continue the business under the name of the Pease Greenhouse and Nursery Co. Temporary headquarters have been established at 316 Loebel street. A catalogue will be issued at once.

KALISPELL, MONT.—The Montana State Horticultural Society will hold its first state gathering here this month.

ORANGE, CAL.—W. W. Perkins, the florist, recently shipped a car load of rose plants to New York. The car contained 48,000 plants.

MORRIS, ILL.—The Morris Floral Co. has shipped since Dec. 1st, 263,500 rooted cuttings and pips of carnations.

ATLANTA, GA.—Charles Wachendorf was married Jan. 16.

LOUISVILLE, KY.

Various Notes.

Trade during January has been very good, with plenty of funeral work. Roses are a very scarce article here on account of so much cloudy weather. The carnations that are coming in now are fine.

Jos. Coenen's little child is very ill with pneumonia.

T. B. Rudy, who has been confined to his bed with la grippe, is much improved and able to be about again.

Jacob Schulz, or "Grandpa," as the boys call him, will astonish some of the florists with his house of new seedling carnations when the time comes.

Wm. Mann's place is in fine condition. His Calla lilies and carnations are bringing a fine crop.

C. H. Kuzman, "the King of the Triumph Carnation," has all the funeral work he can attend to.

Hy Fuch's house of Brides and Maids is very fine.

A. Heitz is building four new houses on his new place, just opposite St. Louis cemetery.

Anders Rasmussen's place at New Albany, Ind., the home of the new carnation "Hoosier Maid," is a sight worth going to see. A house eighty feet long is just now in its beauty. The growth is vigorous, has a good stiff stem and the color is a pure white. It is a sport of Day-break and a fine thing for cut flower work.

There will be lots of rebuilding of greenhouses here this season.

HY LICHTENFELD.

BEARDSTOWN, ILL.—Frank Bros., who recently purchased the greenhouse property of E. Burten-Shaw (who succeeded W. Druce Co.), are now the only florists here and all mail matter should be addressed to them.

PORTCHESTER, N. Y.

The annual dinner of the Westchester County Gardeners' Association, which was given at Portchester on Feb. 6, was as usual a most enjoyable affair. Some forty members and their guests sat down to partake of the good things provided, and when cigars, coffee and the other things appeared, the president, Robt. Malloy, opened the flood-gates of oratory. He, on behalf of the society, heartily welcomed the guests, and said they all appreciated the attendance of so many from a distance on such a bad night. He introduced William Smith as toast-master, and Messrs. Smith, Martin, Scott and Cockburn, representing the Tarrytown Horticultural Society, were each called upon to speak, which they did in complimentary strains mingled with laudatory remarks, that though the members of that society had visited Tarrytown last November and succeeded in capturing some of the most coveted prizes, the Tarrytown boys were determined to visit Portchester at the next show held there and retaliate.

Messrs. Carroll Elliott, Leonard Barron and J. J. Jordan were present from New York City. Mr. Elliott paid a glowing tribute to the quality of Portchester coffee. Mr. Barron, speaking for the American Rose Society, urged those present to do all in their power to make the exhibition at the Waldorf Astoria in March a great success. Mr. Barron's efforts will, no doubt, result in much from that district for the show.

William Anderson, John Shore and many others made addresses touching upon the topics and duties of the hour. Mr. Shore referring to the craze for size and gaudy effects which controlled almost everything horticultural today, lamented the fact that many gems were ignored and too seldom seen; he hoped to see the day when all that was truly beautiful will be appreciated. Private gardeners could do much to bring about this desirable change. The society hopes to hold an exhibition in Portchester next November.

J. I. D.

A copy of the American Florist Company's directory of florists, nurserymen and seedsmen for 1901 has reached us. It contains in addition to the corrected lists of names and addresses, a good deal of other useful reference matter, making a total of 297 pages. It is published by the American Florist Co., 324 Dearborn street, Chicago, and the price is \$2.00.

BIBSTON, TENN. Fire destroyed the greenhouse of Dr. J. M. King, Feb. 3. Loss \$600.

NEWPORT, R. I.—H. J. Hess has opened a store on Thames street.

Norway

The Queen of Commercial White Carnations.

The modern idea of a commercial variety combines large size with free rapid growth and productivity, a fine keeper and shipper. It gives us pleasure to offer the white we have all been looking for. A distinct feature is that the flowers are remarkably uniform in size, 3 to 3½ inches in diameter. It is selling rapidly.

Place your order at once.

Price of the above two varieties, \$1.50 per doz., \$10 per 100, \$75 per 1000.

Genevieve Lord

The only pink carnation which can claim the proud distinction of having strong exquisite color, beautiful rich glowing color; these are its most distinct features. The flower is large and well formed, 2½ to 3½ inches in diameter. Can be had in good flower by November 1st to 15th. It is continuous and free-blooming.

Place your order early. \$5 per 100, \$40 per 1000.

WE CAN ALSO FURNISH
PROSPERITY, ROOSEVELT, LORNA and all other 1901 novelties,
Also LAWSON, MARQUIS, CROCKER, ESTELLE, OLYMPIA and other new and standard varieties.

Lettuce—Big Boston, Boston Market and other varieties, 15c per 100; \$1.00 per 1,000, \$8.50 per 10,000; if by mail add 10c per 100. Cabbage—Walden and Succession, 25c per 100, \$1.25 per 1,000; if by mail add 10c per 100. C. B. Vincent, Jr., & Son, White Marsh, Md.

Tomato plants—Benny 3, 1 in., \$2.00 per 100. Lordard 2 1/2 in., \$2.00 per 100. Transplanted plants, 50c per 100. Lettuce—Silver Ball, 10c per 100; \$1.25 per 1,000. Cabbage plants—Joy Walden ready March 1. Write for prices on large orders. Mrs. Gilwood, Worthington, Ohio.

Grand Rapids lettuce plants: transplanted, string and stocky, 25c per 100; \$2.00 per 1,000. James Frost, Greenville, Darke Co., Ohio.

VERBENAS.

We are headquarters for rooted cuttings of verbena. Having made a specialty of them for several years we have the very finest, selected from hundreds of kinds which we have sought for trial. Our price is 60c per 100, \$5.00 per 1,000 except in special cases. Wholesale special prices on lots of two or more thousand. S. W. Pike, St. Charles, Ill.

Verbena, 40 best mammoth var., 60c per 100; \$5.00 per 1,000. Verbena, strong, all of cuttings, \$2.00 per 100; \$18.00 per 1,000. Express prepaid on all rooted cuttings. C. Humfeld, City Center, Kan.

Verbena, 50c finest named variety, perfectly healthy, free from rust. Plants, \$2.00 per 100, \$20.00 per 1,000. Rooted cuttings, 60c per 100, \$5.00 per 1,000. Send for list. J. L. Dillon, Bloomington, Ill.

Verbena, 25 grand varieties, strong healthy plants, 2 and 2 1/2-in., \$1.50 per 100, \$12.50 per 1,000. Rooted cuttings, 60c per 100, \$5.00 per 1,000. H. B. Clark Co., Springfield, Ill.

Mammoth Verbenas, large plants, red, pink, white, blue, etc., mixed or separate, 60c per 100; \$5.00 per 1,000. S. Whitton, 15-17 Gray St., Chicago, N. Y.

Verbena. Rooted cuttings, 25 varieties, 60c per 100, \$5.00 per 1,000. Express paid. S. D. Brant, City Center, Kan.

Verbena, 2-in. pots, \$2.00 per 100. Cash or order. H. Cunningham, Milwaukee, Wis.

Leon verbena, rooted cuttings, \$1.50 per 100. Greene & Underhill, Watertown, N. Y.

Leon verbena, 2 1/2-in., \$2.00 per 100. R. Vincent, Jr., & Son, White Marsh, Md.

Leon verbena, 2 1/2-in., \$2.00 per 100. Good & Reese Co., Springfield, Ohio.

VINCAS.

Vincas—Major and Minor, strong bed-grown plants, \$1.00 per 100; \$7.50 per 1,000. Major put in flats, \$1.00 per 1,000. Also 5,000 October struck, now in cold frames, fine plants, \$15.00 per 1,000. The above stock is true to name and satisfaction guaranteed. Cash with order. James M. Lamb, Fayetteville, N. C.

Vincas, variegated, rooted cuttings, 25c per 100; 2-in., \$2.00; 2 1/2-in., \$3.00; 3-in., \$4.00; 4 1/2-in., \$5.00; 4-in., \$10.00 per 100. Greene & Underhill, Watertown, N. Y.

Vinea, Harrison vine, 2-in. pots, \$2.00 per 100. Cash or order. C. D. D. Jos. H. Cunningham, Delaware, Ohio.

VIOLETS.

10,000 Marie Louise violets. Sand rooted cuttings, extra strong and free from all diseases, \$1.00 per 100; \$7.50 per 1,000. October struck, now in cold frames, fine plants, \$15.00 per 1,000. The above stock is true to name and satisfaction guaranteed. Cash with order. C. Lawritzen, Rhinebeck-on-Hudson, N. Y.

Marie Louise, nice, clean stock, sand-rooted cutting, 75c per 100; \$6.00 per 1,000. Well established plants, \$1.25 per 100; \$9.00 per 1,000. Now is the time to stock up at little expense. Sample free. R. Kibourn, Clinton, N. Y.

Marie Louise, Lady Campbell and California, standard runners. From 100 to 5,000. October 1, 1900, from soil, \$7.50 per 1,000. Robketter & Pyle, Willowdale Nurseries, Willowdale, Chester Co., Pa.

Violet Runners, 2,000 strong rooted runners, Lady Campbell violets. From 100 to 5,000. October 1, 1900, from soil, \$7.50 per 1,000. Samples free. Wm Swayne, Kennett Square, Pa.

Princess of Wales violets, young plants, \$2.00 per 100; \$15.00 per 1,000. Wm. Sim, Cliftondale, Mass.

10,000 M. Louise violets, 2 1/2-in., in bud, \$1.50 per 100. Morris Floral Co., Morris, Ill.

Swanley White, 2-in., \$2.00 per 100. Nanz & Neuner, Louisville, Ky.

MISCELLANEOUS.

Rooted cuttings, per 100. Achyrantes \$1.00. Cuphea (cigar plant) \$1.25. Impatiens Sultanii \$2.50. Manettia bicolor \$1.50. Tradescantia iridifolia Impatiens Sultanii \$2.50. 2 1/2-in., \$1.00 per 100. Greene & Underhill, Watertown, N. Y.

10,000 redum variegatum, 10,000 cigar plants, C. B. Vincent, Jr., & Son, White Marsh, Md., all 2 1/2-in., \$1.50 per 100. Morris Floral Co., Morris, Ill.

TO EXCHANGE.

To Exchange—Best varieties of Ivy Geraniums, from flats and 2-in. pots; also pansy seed of the finest strain for rooted cuttings of Mrs. Brad Jocky, Trumph and Daycross. Correspondence invited. Frank L. Rumey, Box 124, Stoughton, Mass.

To Exchange Rooted cuttings of Ethel Crocker, Mrs. Frances Jost and 41 H. Crane, for rooted cuttings of Frodo, Maid or Meteor roses. Our is the best, healthy stock, we want the same. Morton Grove Greenhouse, Morton Grove, Ill.

To Exchange Standard varieties of bedding geraniums, 2 in. at \$2.00 per 100 for rooted carnation cuttings, Box Benjamin, Verbenas, A. plumous, B. L. B. B., farinagus, festiva, etc. All plants or orders, H. B. Clark Co., Philadelphia, Ill.

Geranium pot plants, 150 each odd white and scarlet, 50 each Mme. Sallier, Frances Perkins (white), mixed 25c, in a channel for rooted carnation cuttings. Geo. F. Brynson, L. B. 1156, Kent, Ohio.

To Exchange—Double fringed petunias (see adv) for roots of French canna. Krueger Bros., Toledo, Ohio.

CUT FLOWER BOXES.

Star Florists' Boxes, Edwards & Decker, Mrs. L. & M. N. Fifth St., Philadelphia, Pa.

Florists' Boxes, The J. W. Setton Mfg. Co., 241-247 So. Jefferson St., Chicago.

H. Schultz & Co., 117-123 Market St., Chicago.

DECORATIVE MATERIAL.

Southern wild smilax, new crop now ready. Agents: J. R. Desmond, Chicago; L. J. Kreesbover, New York City; M. Rice & Co., Phila.; The Vail Seed Co., Indianapolis, Ind.; Caldwell the Woodman Co., Inc., Exeter, N. H.

Laurel festooning, the best, 4 to 6c per yard. Agents: J. R. Desmond, Chicago; L. J. Kreesbover, New York City; M. Rice & Co., Phila.; The Vail Seed Co., Indianapolis, Ind.; Caldwell the Woodman Co., Inc., Exeter, N. H.

Hardy cut ferns. Per 1000 lots, \$1.25; 5000 lots, \$1.20; 10,000 lots, \$1.10; 25,000 lots, \$1.00. B. Bragoe, Hinsdale, Mass.

EVERYTHING FOR FLORISTS.

For special information apply city ticket offices Pennsylvania lines to H. R. Derling, A. G. P. A., 248 South Clark street, Chicago.

THE BEST COMMERCIAL FERNS.

BY CHARLES W. COX

Read before the Philadelphia Florists' Club Feb. 7, 1901.

Mr. President and Gentlemen: Your essay committee has selected me to read an essay on "The Best Commercial Ferns." From my own point of view I think they have made a grave mistake in this matter; in selecting a grower to tell you which ferns keep best in the stores, which last longest in the ferneries under adverse circumstances, and on which varieties they realize from 200 to 300 per cent profit. Therefore, if I fail to come up to your expectations, the vote of censure is on the committee.

The fern, the queen of all vegetation; if the palm can claim the title of the princess of the vegetable kingdom, I am sure the fern can go one better, from their extreme beauty and diversity, as well as their general adaptability in arrangement with flowering and ornamental foliage plants.

Ferns when well grown are indispensable and possess peculiar attractions, as their management gets better understood their popularity increases, and the now almost universal use of plants, and especially of cut ferns, intermixed in floral decorations, has led to the production of a few of the most suitable species in immense quantities. As regards ferns it may reasonably be assumed that although hundreds of thousands are now grown, where hundreds only were to be found a few years ago. Many good and often most beautiful sorts are becoming scarcer every successive season, and the reason assigned for this state of things is that kinds adapted to the purpose of decorating are comparatively few in number, and the demand for such being yearly or the increase, it is only natural that florists should devote more space to these kinds to the exclusion of many others, which, however beautiful in themselves, are unsuitable for indoor decorations. A few of the ferns may be called more curious than beautiful, such as the platycerium or Elk's horn fern, of which I will speak later.

I have selected a few of the best varieties that I consider most suitable for growing as specimen decorative plants, namely:

Adiantum Farleyense, queen of maiden-hairs, makes a fine specimen plant when well grown. A rhodophyllum is another plant worthy of notice, of compact habit and beautiful colored frond, and will be used largely in the future as a substitute for Farleyense, as it is of a more hardy nature. A decuman, another free growing useful variety of strong habit that will stand hard usage. A gracilis, a most elegant fern with light graceful fronds, makes a novel specimen plant, and its fronds might be more used with fine cut flowers. A elegans, a beautiful maiden hair with light spreading fronds, and is much grown in preference to A. cucumatum for cutting. A latouanii is a beautiful variety, with spreading recurved fronds, and makes a fine pot plant. A. Giesbreghtii, or Scutum, a

very handsome fern which is more used in Europe, makes a fine specimen and ought to be more generally grown. A. Boehmianum, a most valuable fern of a darker green color than cucumatum, valuable to grow as a pot plant. A. cucumatum, the old variety, is perhaps better known and more cultivated than any other maidenhair fern, probably because it is one of the most graceful and useful of all known species; indeed, nothing can surpass the elegance of its foliage for general use among cut flowers.

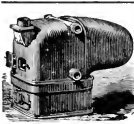

Platium bulbiferum is rarely seen in this country, but it is grown in large quantities for the London market, and is considered one of the most important ferns for house decoration. A *laxum pumilum*, a beautiful species with finely cut fronds, pale glaucous green, a fine table plant. *Cibotium Scheidei*, though it appears soft, has been found to stand well in decorations, and the large fronds are remarkably handsome, a very quick grower and profitable plant. *Cytomium falcatum*, commonly called the holly fern, remarkable for the thick, leathery substance of the fronds, makes a good useful plant for decorating when grown in 6 or 7-inch pots.

Davallia filix-gramma plumosa has large spreading fronds, very nicely divided, and makes a splendid plant when grown in pots or pans. *D. Mooreana* is undoubtedly one of the handsomest decorative ferns known, with large spreading pale green fronds, and it is a free grower. *D. Hirta cristata* (commonly called *Microlepia*) is a beautiful fern, with rather large green, finely divided fronds, which spread over and terminate with a beautiful tasseled crest, and is destined to become a profitable plant when well grown for specimens. *Lomaria Gibba* ought to be more generally grown than it is. I consider it a very useful plant for decorating, as it makes a splendid specimen from four to five feet across, and being so regular in growth is perfectly distinct from all other ferns.

Nephrolepis. This is a most beautiful genus; many of the species have large drooping fronds and they are particularly adapted for growing in elevated positions. *N. Bostonensis* is too well known to need any comment. *N. Davallioides furcans*, an elegant variety with long, arching pinnate fronds, the apices of the pinnae being forked and crested, and the fronds terminating in a branching crest, it makes a noble specimen plant. *N. Wittboldii*, a new variety, from the few plants I have seen promises to become a very useful fern.

Platycerium alioforme, Stag's horn fern, is a very curious and interesting fern, which seems to be growing in favor for decorating conservatories, etc., and will make a first-class novelty mounted on blocks and will find ready sale. *P. Grande* is considered an improvement on the old variety, it being a stronger grower. *Polypodium aureum*, a coarse leaved fern, but one that makes a very fine specimen in 6 and 7-inch pots, is well adapted for room decoration and a 2-inch pot

plant can be grown into a fine specimen in the space of a year. Polystichum coriaceum is a most desirable fern for all purposes on account of its strong leathery texture, and it will stand rough usage.

Pteris: This genus includes a greater number of species and varieties than any other family of ferns and is also remarkable for the beautiful variegated and crested ferns, the latter being very numerous. P. Mayii is beautifully crested and I consider it one of the best to grow for decorations in 5 and 6 inch pots. P. Wimssetti also makes a fine plant for the same purpose. P. Drinkwaterii is also a promising sort for growing into a good-sized specimen. P. Argyrea makes a pretty effect when grown with two or three plants together in an 8 inch pan. P. tremula Smithiana, a very fine crested variety, has the free vigorous habit of the type, each frond being divided into several distinct frondlets and makes a nice specimen. P. Cretica nobilis, the great feature of this fern is its bold, not to say stately habit, the crested light colored fronds standing up so well as to render it a comparatively small specimen exceedingly ornamental. There are several other varieties of fern that are useful as specimen plants, but I consider the above the most serviceable and profitable.

There seems to be a growing demand for small ferns, for planting in small ferneries and jardinières. I consider well grown plants in 3-inch pots the most useful for that purpose. I have selected a few specimens that I deem the best, namely: Aspidium Thussimense, Cyrtomium falcatum, C. Fortunei, C. carvotidum, Lastrea aristata variegata, L. chrysoloba, L. Opaca, Nephrolepis cordata compacta, Polypodium aureum, Polystichum coriaceum, P. Setosum, Pteris hastata, P. Victoria, P. nobilis, P. nobilis variegata, P. Wimssetti, P. densa nana compacta, P. Serrulata major, P. Mayii.

The above list of small ferns is worthy of special attention and when well grown ought to command at least \$8 per hundred to pay the grower. It has been mentioned to me on more than one occasion by some of our leading florists to make a specialty of such plants. Now it is a question whether they are willing to pay that price for such stock, when they can purchase commoner kinds at from \$2.00 to \$3.00 per hundred. Some of our leading growers sell 5,000 for \$100 in 2 to 2 1/2-inch pots. Gentlemen, my advice to you in this matter is to grow sweet alyssum at \$2.50 per hundred. There is money in it for you, instead of growing ferns at that price. It would be like a Guffey oil well in comparison.

It is evident that the number of plant growers have greatly increased and the collection of plants they cultivate is a proof that their conception of the beautiful is not confined to brilliant colored flowers alone, but that they are able to appreciate the elegance of our noble ferns, independent of bloom, which has been for so many years the sole aim of the florist, who looked forward to the development of these, in many instances short lived flowers, as the sole reward of the whole season's labor. How it was that we were so long in learning to love these highly ornamental ferns it is difficult to say, but we are becoming thoroughly alive now to the noble beauty and gracefulness displayed by some of our valuable ferns.

Let us state distinctly, however, that great as our love for ornamental ferns

may be, we do not wish to exalt them to the obliteration of the flowering plants, for although the well grown ferns are highly ornamental when grouped together, we are fully persuaded that a judicious selection from both classes, according to the space at our disposal, is the surest way of producing a gay and cheerful effect throughout the entire year.

The cultivation of ferns is much easier than that of plants grown entirely for the beauty of their flowers. To produce plants profusely adorned with flowers close attention must be given to resting and starting into growth, etc., at the proper season, but the plants now under consideration have to be treated upon quite a different principle, for as their beauty is to be sought in the foliage the object should be to make them grow as vigorous as possible from the earliest stages, so that their characters may be seen at an early period of their existence.

Now is the time, taking into consideration the growing demand for ferns, that the growers and retailers should get together and establish a system of regulating prices of well grown good varieties so that the grower can make a living out of it, which we must all admit he is not doing at the present time, at the prevailing prices.

DES MOINES, IA.

Various Items.

On the 8th of this month we had a very severe snow storm, in fact the hardest for a number of years, followed with 12 degrees below zero. It had its effect on business.

We took a spin around some of the houses lately and found Lambert making big preparations for a rushing trade in the plant department, having quantities of most all the leading bedding stock. His Easter stock looks about right for this season of the year.

At J. F. Marshall's we found him busy as ever with his carnations, which are looking fine. He grows Crane, Joost, Maceo, Evanston, Bradt, Jubilee and McGowan. We noticed some fine seedlings, among which we hope he will find a prize winner.

Since my visit Mr. Marshall has had the misfortune to lose his youngest child, whose death occurred Feb. 7. Mr. and Mrs. Marshall have the sympathy of the craft in their affliction and we can but say:

"There is a calm the poor in spirit know
That softens sorrow and that soothes woe;
There is a peace that dwells within the breast
When all without is stormy and distress;
There is a light that glides the darkest hour,
When trouble thickens and when tempests lower
That calm is faith, and hope and love is given;
That peace remains when all beside is riven;
That light shines down to man direct from heaven."
J. T. D. F.

DANSVILLE, N. Y.—The Genesee Valley Seed Co. has been established here. The proprietors are J. C. Van Senter & Co. They will do a mail business entirely.

MADISON, WIS.—Mrs. A. Guillaume, la La Crose florist, has opened a branch here with her daughter, Miss Emma Guillaume, in charge.

BRIDGEWATER, MASS.—Frank Brunton has purchased land here and will establish a nursery, a feature of which will be a range of greenhouses.

FAR ROCKAWAY, N. Y.—L. A. Solomon is said to be arranging for the erection of a range of glass here.

LENOX, MASS.—The mid-winter ball of the Lenox Horticultural Society took place Jan. 31 and was a decided success. The floral decorations were very elaborate.

IF YOU don't find what you want in our classified ads, let us know about it. We will find it for you if it is to be had.

TOPEKA, KAN.—W. H. Barnes, secretary of the State Horticultural Society, has won his fight with Governor Stanley. The governor wanted to consolidate the society and the state board of agriculture. The senate committee on agriculture has turned down Stanley's scheme and recommended an appropriation for the maintenance of the society under Barnes' management.

HAGERSTOWN, Md.—The annual meeting of the Western Maryland Horticultural Association was held here last week. Charles G. Biggs, of Sharpsburg, was re-elected president, and Arthur L. Towson, of Smithsburg, secretary. Topics of interest were discussed by Mr. Biggs, Samuel S. Stouffer, Samuel Cronise and others.

CINCINNATI, O.—Edwin Hoffmeister, a member of the firm of Hoffmeister Bros., died Feb. 2, aged 26 years.

Messrs. Kroeschell Bros. Co.
EVANSTON, ILL., March 20, 1894.
DEAR SIR: Replying to your favor, would state that
I have in use three of your Improved Green House Boilers,
which I had been had for five years. Before purchasing yours
I had been using the Devine Boiler. I like your boiler
better because it has water frout and water back, which
allows no heat to escape. The saving of your boiler in
fuel as compared with other boilers is about one-fourth.
Your boiler is easier to run than other boilers.
Yours truly,
M. WELAND,
Evanston, Ill.

NILES CENTRE, COOK CO., ILL., March 20, 1894.

THE RETAIL FLORIST.....

Bulbous Flowers.

A few random hints on what is obtainable on the market and their proper uses may be of interest to many. As spring approaches there is naturally a greater variety of stock to be had, and most flower buyers are already asking for spring blossoms. It is becoming more apparent every year that the season marks in flowers are being wiped out and many expect that it will soon come to pass that almost any flower can be had at any time of the year. Just at present almost anything can be picked up on the New York market, and florists can have no excuse for being unable to suggest a large variety of suitable material for any kind of job.

Store windows are becoming more attractive by artistic arrangements of bulbous flowers, and a vase or two of your choicest placed on the end of the counter may tempt many to buy. It has been our experience that morning customers as a rule prefer to buy the flowers they see on the counter in preference to those in the icebox, and we advise the placing of a portion of your stock where people cannot help but see it. Much of the bulbous flowers seen on the market is strong evidence that many grocers are penny wise and dollar foolish. The bargain counter of the bulb store is a poor place for the commercial cut flower grower to lay his stock at. The man who produces quality reaps many rewards, two of which are better prices and self-pride.

Daffodils.

Now, as to the uses of bulbous flowers. Whilst they are permissible at every kind of function, they are distinctively appropriate for morning affairs. We recently arranged a "yellow table" for a luncheon party of eighteen. In the best houses no cloth is used on a luncheon table—that is, if the table is what it ought to be—of the finest malden and highly polished. This particular table was round, and we used a 20-inch round flat basket, which we first filled with *Adiantum Farleyense* plants out of 5-inch pots, selecting light, bright foliage, and filling so as to completely hide the basket. We put on No. 25 wire 200 single trumpet daffodils, putting three flowers on one stick; these were arranged at irregular heights among the ferns; then we mixed through and fringed the basket off with 200 *campernelle* jonquils, placing some to rest on the table. A band of 7-inch satin-faced taffeta ribbon was placed around the edge of the basket to emphasize the beauty of the fern; four short bows of the same material were arranged to connect with the band, and sprays of *Narcissus Soleil d'Or* were put across the bows and here and there on the table a small *Farleyense* leaf and a spray of jonquils were placed to break the formal line, but nothing was done to interfere with dishes or make it appear heavy. Yellow *freesia* (*Leichtlini*

major) was used for the finger bowls. We have done the same table on a previous occasion, when we used a low green Venetian bowl and *campernelle* foliage instead of the basket and fern. We prefer vase work to baskets where table decorations are concerned, but it is not always possible to do effective work with vases on large tables. The very finest work can be done with single daffodils or pretty jonquils, and some very choice sorts are seen but too seldom. Wherever they are used the foliage should be kept low, the flowers showing prominently, remembering always that solid flat arrangements will destroy the beauty of any flower, particularly spring flowers.

Roman Hyacinth.

A great many more white flowers, such as paper white narcissus and Roman hyacinths, are being used than formerly, principally because they are sweet and cheap. A wreath of Roman hyacinths fringed with *Farleyense*, with just a cluster of red or pink roses, may be made to equal if not exceed in beauty many a more expensive design. We often think more of them could be thus used with profit.

Tulips.

Tulips are usually difficult flowers to arrange and there is no possible excuse for some of the colors being seen. We know one party who makes a specialty of choice sorts and it's a pleasure to work with the stock. The tulip, more on account of its color, is the one bulbous flower more than any other that is used for dinner table decoration, and to be strictly correct in arranging them nothing but their own foliage should be used. Just now, of course, they are very scant of dress, and often other greens must be put with them. Care should be used, however, to avoid exotic effects; some grass-like foliage is best in the absence of their own. Greens should be kept low, the flowers arranged at irregular heights.

A tulip dinner or luncheon can be made very interesting by having everything on the table conform to either the color or form, both if possible, of the flower. Tees can be served out of single tulips, in fact a clever chef or confectioner can serve many forms of dainties from these flowers. Much of the real beauty would depend on the arrangement of the flowers; often the use of old Dutch vases or *bisque* ware is more appropriate and produces better results than the round board or basket. If a basket is used, a simple green willow or rush flower basket is best in such arrangements. The tulips are bunched and put closely together, giving the impression that they have just been gathered from some Dutch flower garden. Very few prettier effects can be produced than that of a table with, say, from 200 to 500 *Coerule Cardinal*, *Chrysolora*, highly colored *La Reines* or any of the one-colored tulips, but your design must be wholly in accordance with the flower.

Very effective arrangements can be made from tulips. First secure them from the flower bank, also the petals and the leaves—they will remain that way for two days to two out, using a string of raffia or some such green. You will need about a cheap garland and it makes one from 4 to 6 feet long and hung upon a 20-inch contrasting colored background the effect will show up surprisingly good. Or they will well suspended from balconies, etc.

Freesia is being abundantly used where small, sweet flowers are wanted. It is not much for show, but placed in small vases, on desk or table, it is capable of showing powerful influence; a bunch of it might go in any box of flowers or be tied at the side of any bunch. It is a favorite for the finger bowl.

Lily of the Valley.

Lily of the valley has been bringing high prices this season. Now, of course, it is getting down within the reach of all, and no store should be without some of it. Whenever a critic comes in for something choice one need not be over-astounded to point to this grand little flower, and if it is fresh and sweet it is more than likely that it will be chosen from amongst its gaudy comrades. A well made bouquet of lily of the valley, with or without a cluster of some other flower, is still one of the choicest of all bouquets. The foliage should be greatly subdued or almost entirely omitted in the hand or bridal bouquet. Where it is used in a wreath the leaves should be used, but placed below the flowers. In vase work all the foliage is permissible. In the corsage bouquet very little foliage is used, and the bunch is tied with small bow of very narrow white ribbon. Use a white headed pin. Boutonnieres of valley are not as popular as they were once upon a time; the price and the popularity of simpler forms are responsible perhaps.

Other Flowers.

Dutch hyacinths are so far very poor. Soon, however, pretty mixed bulb baskets or pans can be made up, and with a bow of showy ribbon attached might induce many persons to buy. Try your hand on one or two; let the people see some of your artistic work without ordering or paying for it first.

Harrisias are becoming plentiful, and what is more useful in a rush funeral order? And very few flowers can equal them tied in a flat bunch. Bunches of *panicums*, *primroses* and such flowers are occasionally being asked for by the romantically inclined, and forget-me-nots, which are coming in fine now, are jewels for the sentimental. A small basket of *myosotis* and valley with just one rose bud and a bow of blue ribbon is a choice present for a young girl; sometimes the baskets are covered with *surah* silk and the name and date printed on the ribbon.

Roses.

At Thorely's we recently saw a bouquet of white roses with shower of pink baby ribbon and broad streamers of pink; it was at night, and the contrast of colors was something striking; the bouquet was intended for the second attempt of a widow.

It is often the case that we see wreaths or bunches of white flowers with just one fine red rose. There's a good deal of meaning in a red rose being thus prominently arranged and its effect is pleasing. Bouquets of Golden Gate roses

the popular, the season's first favorites. It is the first of the varieties that I have seen in this city. The flowers are in perfect bloom. We notice a most peculiar thing about this flower. It is grown during the bloom, so inclined to be more deformed and turn to greenish shades. We find that the majority of smaller flowers have the best color and form. These we will make the handle of the bouquet very small, and mix with white, blue or light pink ribbon. The latter is best. Farleyense goes well with this rose, and also is better of a valley.

Liberty, though a magnificent rose, has not been so abundant as we thought it would be. Old Meteor has been coming in in floods, and kind of jostled the new one; better is expected of it another year. One fine Liberty is worth a dozen Meteors where quality is appreciated.

Generations, well, we will have them for another day, and will illustrate what we say by a few special designs. — BUCK.

AN ELABORATE DECORATION.

The dinner, dance and supper given by the Clarence Mackays at the Waldorf-Astoria on Feb. 1st was one of the most elaborate and artistic decorations seen in the United States for some time, and we doubt if a part of the feat was ever equaled. The Mackays are ambitious and are worth millions. They desired to give their friends a surprise and in the development of the surprise nothing anything done in New York in recent years.

This they succeeded in doing by giving

them a dinner. Some thing like 2,000 cut flowers were used in these garlands, and the usual color scheme which is Mrs. Mackay's favorite—rose lavender—gave one of the most effective decorative arrangements.

The vestibule outside this great room is several hundred feet long, and it was completely turned into a green bayou all the way, small and palm lining ceiling and wall, a green baize carpet on the floor adding to the effect.

The public restaurant of the Waldorf had been engaged, and this was made to represent a forest; the ceiling and walls were hidden with wild smilax and floral mosses; small tables were placed beneath immense bay trees on the floor; five thousand electric lights were arranged among the greens and trees, and the scene was very fine.

When the guests had finished dinner they were ushered into the room down stairs and none of them expected any further developments. In twenty minutes' time the dinner tables were cleared, carpet taken up and the polished floor and a prettily decorated ball room took the place of the dining room. It was a big surprise for the guests who were invited up to dance, and the magnitude of the job can be imagined only by those who were there to see it.

Small & Sons had charge of the decorations, which were executed under the direction of the artist, Arthur Meakin. Many of the leading retailers took a peep at the completed work and all gave great praise to its excellence.

BEDDING GERANIUMS.

BY EDWIN A. KANSE.

Read for the Chicago Florists' Club Feb. 15.

In selecting varieties for this paper I have chosen only such as I am familiar with and know to be excellent bedders. Many geraniums that appear well under glass make a very poor showing when planted out. I am of the opinion that the strong growers are usually the ones best adapted for this purpose, or the ones that show the most vigor in growth rather than those which show great abundance of bloom under glass. In looking over our stock before planting out in the spring I have often noticed that some of the best bedders show the least bloom, so that it will be seen that at least a season's trial outside is necessary before determining whether a geranium is a suitable bedder or not. I also believe that where the best results are to be obtained the plants should be grown with the idea in mind that they are to be used for bedding purposes, and not rely too much on the strong natural resources of the plants to bring them into proper condition outside.

The geranium is perhaps the most satisfactory plant known to florists, because it is so easily propagated and requires so little attention. For this reason we regard it as one of the commonest of plants, though many of our parks and private gardens would find it a hard matter to procure a substitute for this old-time standby. The extensive use of herbaceous and perennial plants in connection with the natural style of landscape gardening now so popular in this country has done much to reduce the number of geraniums used. The planting of these plants in connection with a landscape is considered bad form, it being claimed that their bright colors do not harmonize with quiet and restful views; therefore the landscape gardener has confined them to isolated places apart from the landscape view. However this may be, I believe that the geranium and many others of our most beautiful cultivated plants will continue to be favorites with many persons after the fad of substituting hardy plants is a thing of the past. The period of bloom with most herbaceous plants is usually not longer than a month or so, while geraniums, ageratum, heliotropes, etc., are in bloom from May 21st to October 21st, or until cut down by the frost. I do not wish to give the idea that I am not in favor of herbaceous plants, for I am, but I do maintain that in order to have satisfactory results in this climate one must give them during the summer nearly as much attention for a much less amount of bloom.

It has been my experience that cuttings taken from geraniums in the fall and rooted will make much stronger plants and more desirable for bedding purposes than if grown from cuttings made during the winter months. Fall rooted ones, after being kept in a dry condition, can be started along in February and by bedding out time are strong, thrifty plants, while those propagated in the winter are inclined to be weaker and smaller owing to insufficient time to develop. Too much watering in summer time I believe is often the cause of plants rotting off or producing a small amount of bloom. Geraniums can stand a great amount of drought without injury to them and produce the most flowers when in a somewhat dry condi-

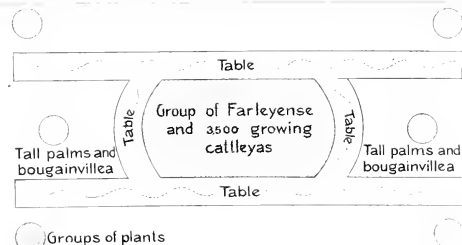

Diagram of the Mackay dinner table seating 190 guests at the Waldorf-Astoria, New York, February 1.

almost carte blanche orders to caterer and florist.

The greater part of the first and second floors of the hotel had been hired for the occasion. The Astor gallery was the room de-resistance. Here the dinner tables were set, seating 190 of New York's most exclusive society people. The walls of this magnificent room were prettily draped in wild smilax, with here and there long clusters and garlands of bougainvillea. Groups of plants were placed in the corners and center of the room, and immense plants of bougainvillea were arranged among the palms, the whole being lit up by thousands of fairy lights. In the center of the main table, covering an oval 35 by 19 feet, was a low bed of Adiantum Farleyense, and among these ferns were arranged some 3,500 cattleya blooms on plants. Radiating from this central group along all the tables were delicate garlands of Farleyense and cattleyas, their beauty punctuated by ruffles and bows of broad cut

The accompanying diagram will give some idea of the arrangement of the tables and the placing of the plants, etc. J. I. D.

A ROYAL WREATH.

The accompanying engraving is from a photograph of a wreath contributed by the members of the Montreal Gardeners' and Florists' Club toward the decorating of the statue of Queen Victoria, Victoria Square, Montreal, Feb. 2.

The wreath was five feet in diameter and was composed of lilies, orchids, roses, Buddleia Asiatica and Violets, and included leather and shamrock to fully represent the different nationalities of which the club is composed.

It was a fine piece of work and reflects the greatest credit upon Messrs. Joseph Bennett, A. C. Wilshire and G. A. Robinson, who arranged it.

Wreath sent by the Montreal Gardeners' and Florists' Club to the Decoration of Queen Victoria's Statue, Feb. 2.

tion. Over watering causes some to grow rank while others rot off altogether.

I would not advocate setting plants too far apart, as this causes them to grow uneven on account of having too much light. For ordinary spring grown plants I think fourteen inches is about the right distance. This is not so wide apart but what the plants can grow together in a short time, when they will continue to make a uniform bed all summer. Frequent stirring of the soil is always beneficial, but to avoid over watering seems to me to be the principal point to be borne in mind in the care of plants bedded out doors.

I have selected the following varieties as being among the best and most reliable bedding geraniums, at least in this climate at the present time. There are perhaps many varieties known to others at this time equally as good, but not having had experience with these I am therefore unable to give any accurate information regarding them:

Double varieties:

S. A. Nutt. Of all geraniums, both double and single, I think this one is the finest. We are asked the name of this variety many times during the summer. There must be something about its color and habit that attracts one, and besides, it has such a strong constitution.

Mme. A. Chevreliere. This is a double white that can be relied on as a continual bloomer and excellent in every respect.

Waddington. May be an odd variety but it has its place as a dwarf pink; a great bloomer and is always attractive.

Pres. Leon Simon. Clear red.

N. Casteline. Pinkish red.

Alfred Tennyson. Light scarlet.

Beaute Poitevine. Brilliant salmon.

Raspail improved. Large scarlet.

Alphonse Ricard. Orange red.

Single varieties:

Meteor. Red.

General Grant. A very old scarlet variety but one that is extremely useful.

Mrs. E. G. Hill. Salmon color; very strong grower.

Benjamin Schroeder. Finest single pink.

Athlete. Large scarlet flower.

Margaret de Laver. Reddish salmon.

Mrs. G. M. Gaar. Pure white.

J. R. Lowell. Orange red.

Silver leaved:

Mountain of Snow.

Mme. Salleron.

Many new varieties have recently been introduced, even more, I think, than there has been any demand for. Of course, one is always anxious to try new varieties, but a wise person will hesitate before discarding the old tried ones for those that he has not given a thorough trial. And again, those that do well in one locality are sometimes of little use in others.

Among the new geraniums there are several that I have seen which I believe have special merit and which I am going to try next summer. They are as follows:

Le Soleil. Double red; lighter than S. A. Nutt.

Mme. Rozaine. Pure double white.

Mme. Landry. Semi-double salmon.

John P. Cleary. Single red.

Duc de Montmort. Double; nearly purple.

Frances Perkins. Double pink.

Comtesse de Castries. Pink.

Jean Viaud. Semi-double pink.

Clyde. Single scarlet.

Ian MacLaren. Light salmon pink.

Mme. J. Corail. Single pink salmon.

In the discussion that followed Mr. Woodward said he thought the old Queen of the West should be included in the

list. He still has it in fine healthy condition, though others noted that with many it has been diseased of late years.

Messrs. Palinsky and Jurgens said that while Mr. Kamst's methods were correct it was impossible to apply them commercially as regards the growing of plants for bedding purposes only, as the plants could not be sold without having one or more trusses of bloom on. They also said that single flowered sorts would not sell. The people insisted upon having semi-double blooms only.

Mr. Jurgens said he now placed John Doyle at the head of his list of scarlets, as it is brighter than Nutt and as good in other ways. But Nutt is still close to the top. Frances Perkins is his best pink. He had had some trouble with it, though, from disease last summer.

DWARF NASTURTIUMS.

Are dwarf nasturtiums free and continuous enough in blooming to be used for bedding? Could they be started early in pots and transplanted the same as other bedding plants? H. T.

Yes, they can be used to good effect in some styles of flower gardening, but not where high color is required or where a small, compact form is the object, as green would most likely be the predominant color and as the growth is free no clipping can be done.

On the margin of a long border, or a plant here and there in the mixed border, or an edging to some stronger growing plant, they are quite effective. The value of the dwarf nasturtiums as flowering plants rests entirely with the quality of the soil. If a heavy loam, and more particularly if enriched, they will grow so freely and have such a rampant growth of leaves that the flowers will

never by seeing the small flowers poorly and the foliage will soon come above the foliage. They need only a light gravelly or sandy soil. In either of these soils the flowers stand up above the foliage, and they make beautiful, showy plants.

Yes, they can be raised and grown in small pots and planted out as we do with the great majority of our bedding plants. Sow the end of March, and when potting use poor soil and keep the plants in the full-st light.

W. W. SCOTT.

ROSE NOTES.

Propagating.

The last week of bright sunshine has ripened the wood nicely and cuttings taken now will be much superior to those taken during a long cloudy spell. There is no time to spare now in propagating your roses, if you intend planting in June out of three or three and one-half-inch pots. The cuttings should be potted off when the roots are one-half to three-fourths of an inch long, otherwise there is too much danger of breaking them off, and besides, the potting can be done much quicker than when the roots are longer. It is a bad mistake to leave the cuttings in the sand until the roots are two or three inches long and beginning to turn brown. An unnatural growth results, and as there is no food in the sand the strength of the cutting is exhausted and it gives us a weak plant.

Potting.

The best soil for potting is well rotted sod. If it should be too heavy it can be lightened by adding sand. Manure of any kind in the soil at this stage is of no benefit. The cuttings should be potted freely and then placed in a sunny house near the glass and shaded till the roots have taken hold of the soil. Be careful that the first watering is properly done. Have the soil moist to the bottoms of the pots, but avoid having it turned into mud. It is always safest to then keep the young plants somewhat on the dry side till the roots show around the inside of the pots. An occasional syringing over the foliage will be of great benefit.

Watering.

Of course you must never allow the plants to get too dry. I find that the best time to look over the pot plants is in the afternoon, as it is easier to tell then which require water and which do not. It is best to use a watering pot, for it takes an expert to single out the dry plants with the hose when they are so small and not get more or less water on the adjoining plants, which may not need any for some time. By improper treatment in watering many young plants are lost entirely and others are weakened or checked. Sometimes the injury is the result of being too dry, but more often the damage comes from being too wet. The hose is used too freely on most places, and this is really the cause of many failures, shown by yellow and sickly plants.

Once Checked Always Weak.

The health and condition of the plant in this stage has a direct influence upon its future welfare. I have noticed that a plant that is thrifty while in a two-inch pot will generally remain so after being repotted or planted out on the

bench, but a sickly plant, even if it should have apparently regained health and vigor, will with the slightest mistreatment show its old weakness again. Hence the importance of giving the young plants the best of care. The most competent man on the place should have charge of them. The surface of some soils becomes covered with a green growth. This should be removed whenever it forms, as otherwise it is impossible to tell the condition of the soil without knocking the plant out of the pot, which last should be avoided as much as possible.

As soon as the roots commence to work around the sides of the pot the plants should be shifted into three-inch pots. It is a mistake to wait until the plants are potted off before shifting, for they will become stunted and instead of growing right along they will stand still for ten days or two weeks. We should never allow the young plants to receive any check whatever.

The Blooming Plants.

Owing to continued firing on rose beds are apt to be dry on the bottom, a condition which interferes with the plants' growth, and consequently impairs the size of the flowers. You will often find the bed in general moist enough, except right above the heating pipes, where the soil may be dry. It takes very careful watering under such circumstances to maintain an even moisture all through the bed.

At this time of the year, when the sun is really getting stronger, it often occurs that when there is a sudden change to bright sunshine after a short cloudy spell the roses seem to wilt. This is the result of soft growth fostered during the dark days. A light spraying over the heads of the plants will help them to straighten up again. I know of beginners being deceived by this, and supposing the roses were dry they would hurriedly begin to water, which was a mistake. Always examine the beds before watering. Have the hose in the right hand and work backwards. While the left hand examines the soil row by row of plants, the right hand follows with the water.

M. SPENCER.

DISEASED CYCAS.

A customer of mine has a cypress which is in a very bad condition. I send a leaf of some. The other three leaves are not dead at the tip like this one, but all have three or more of the pinnae dead in patches on both sides of the leaf. Can you tell me the cause of the trouble and whether anything can be done to put the plant in good condition again?

A. B.

From the appearance of the cypress leaf that accompanied this inquiry it seems evident that the trouble arises from an unhealthy condition of the roots of the plant in question.

It is naturally somewhat difficult to say positively just what caused this condition without seeing the plant, but it seems probable that this was a newly imported cypress stem, the leaf growth of which was forced up before it had made roots enough to sustain the leaves, and while the stem itself retained nourishment enough to cause the leaves to expand, yet it could not feed them indefinitely without the aid of roots.

Try keeping the plant rather dry, though not *too* dry, for a month or two, and unless the stem has already begun to decay from too much moisture, the plant may ultimately recover strength enough to produce another growth of leaves during the coming summer.

W. H. TAPLIN.

MIGNONETTE.

At the last meeting of the Chicago Florists' Club Mr. E. Buehner favored the members with a talk on growing mignonette.

He said that two important points were a light, airy house and good clean seed to start with. He requires seed that has been grown under glass, as that grown outside is pretty apt to be mixed. He grows Allen's Defiance and sows the seed in three-inch pots in August and keeps the pots in frames till September, when he plants in the house. He thins out the seedlings in the pots to the two strongest, and when planting out in the house selects the strongest of the two. He does not recommend planting the seed in the bench inside where the plants are to flower, as the soil is apt to become sour and the plants do better in the frames outside. The plants must not be allowed to become pot bound. He uses the same compost as for his roses, etc., and finds that a heavy soil is best for mignonette. He feels it essential that the plants have a house to themselves, though he believes they could be successfully grown in the same house with carnations.

After being planted out inside in good soil the main points are tying up and keeping clean. He holds that five spikes of Allen's Defiance should bring \$2 to \$2.50 a dozen to make it really profitable to the growers, as it brings only one crop and the plants average only about four spikes each. This variety makes large spikes with heavy stems, but is somewhat lacking in color, and the color is more inclined to green than some others. And then the crop can be cut out in February and the house used for other stock at a season when space is at a premium. May's mignonette is more fragrant, but the spikes are more uneven in size.

After planting out on the bench he pinches out the center to make the plant throw several branches, but that is all that is done, except to take off the side branches from these. He maintains a temperature of 50 degrees and believes that it is a mistake to keep the temperature lower than that. He can't see that it makes any difference how far the plants are from the glass. He begins to cut them shortly before Christmas, and the crop is cut out in February.

For spikes to sell at a lower price Machel is better, as it flowers from fall to spring, and though the spikes are not large they are more numerous. Improved Miles Spiral is good, too.

To produce specimen pot plants he would sow in three-inch pots and thin out to three strongest seedlings around the edge of the pot and repeat into four-inch and five-inch before becoming pot-bound. For Easter pot plants he would use Machel and sow in October and November. When in blooming pots the plants will make a great growth if set in a hotbed and the pots being moved occasionally to keep the plants from rooting through too much, but plants so grown won't last well afterward. This can be overcome to some extent by mov-

Peter Fisher's No. 130.

ing the plants into the house and hardening off some before using.

He says beware of the moth that lays eggs from which are hatched the little worms that are so fatal to mignonette. One of the worst pests he has had to deal with, though, is black thrips. He says the man who will discover a really effective method of exterminating thrips will win a lot of money.

As to the profit in growing mignonette, he believed that there was more money in devoting the same space to chrysanthemums, and that this would be so until people were ready to pay a better price for fine mignonette, at least in the Chicago market. At present \$1.50 to \$1.75 a dozen is considered a good price here, and it ought to bring \$2 to \$2.50 to make it a good paying crop.

SOME REQUIREMENTS FOR THE ELEVATION OF OUR BUSINESS.

By J. J. BENEKE.

(Read before meeting of the St. Louis Florists' Club Feb. 14.)

In accepting the request made by your trustees to read a paper before you to-day upon "Some Requirements for the Elevation of Our Business," I do this with pleasure, as I know that two essays a month as directed by our trustees will elevate our club mentally and also help us all materially in the advancement of our business. I know that there are members of our club who are better able to handle this subject than I am, still I recognize the fact that when called upon it is the duty of every member of the club to acknowledge and perform to the best of his ability.

In considering the problem of the elevation of our business we find in our daily experience that the successful man in our, as in any other calling, is the systematic one, the one who pays the

strictest attention to every detail and who watches any movement that tend to the promotion of his interests. The old saying is: "Everything at it brings success," and this is no more more true than when applied to the florist's occupation. The first object of great importance to the greenhouse man, or grower, as we call him, is to keep up the standard of his stock and be abreast of the times.

Taking the figures of the last census, our population is estimated at over 500,000 people, and our business represents capital invested of several million dollars, and this sum certainly indicates that we are entitled to claim recognition among the industries of our country. But in order to keep up our standing the first requisites are *systematic work, cleanliness and orderly arrangements*. These must be preserved by the grower and retailer alike if he feels interested in the elevation of the business, for on cleanliness and proper display of his stock depend the sales and the profit. In many places among the growers will be found muddy walks, benches worn out and broken down and plenty of weeds. This does not always indicate that the growers are too busy and have not the time for weeding or repairing; still, this state of affairs is not so prevalent now as it was a few years ago; nevertheless many establishments of today need a change for the better.

A good manager and reliable help is what these places need. The watering, ventilating and firing should be done systematically by trained help, and these men should be held responsible for the regular performance of their duties. In this way the men under you will become more interested in the appearance of your place and will also take a pride in keeping the premises in good condition.

The same principle of systematic work also applies to the store men. At these

places the flower loving public expect an aesthetic display of elegance to the general taste. The retailer should be the educator of the community. A close observance of these points will aid in raising our business to a higher standard than it now occupies.

It is no doubt true that the St. Louis Florists' Club accomplishes some good by bringing members of the trade together for the purpose of exchanging ideas. It helps to elevate them and they learn from each other what they require in their business. But why is it that not every florist in St. Louis belongs to our club? This is a question often asked me. My answer has always been this: The best florists of our city are members of our club. Those on the outside don't seem to realize the benefits to be derived by themselves through these mutual interchanges of ideas and experiences in the business. If they did they would all be in our list of members. Membership in the Florists' Club should be encouraged by the proprietors of all establishments, be they large or small, for their members will receive knowledge and information of plants, flowers and gardening. These are agencies for the promotion and advancement of our business.

Our local exhibition is a good opportunity for the florist to display his talent and enterprise and make a good impression on the public mind. But very few do this. Some say they have not the time, others say there is not enough money in it for them to make a display. They don't seem to think of the indirect benefit they will derive from it after they have made a creditable display and show the public what they can do and arouse in the public a demand for their products and impress them with the kind of edge that they are in the florist's business to elevate it to its highest possible place—and I say finally that one of the most important requirements for the advancement of our business is for every employer or employee in the trade, be it man or woman, is to have a good horticultural education, and the only available way to get this is to become a member of our club. The question box is open for all, and any information you require for your business will be cheerfully given by men of experience.

At present our business is by no means discouraging, but it seems to me that if the florists of our city would adopt a system along the lines of what I have read they would not only gain a full measure of recognition among the trades but by elevating public taste would also elevate their standing socially and rise in the community financially. A hint to the wise.

MONTREAL.

The Montreal Gardeners' and Florists' Club will have an exhibition of carnations Feb. 26th, and various American growers will improve the opportunity to show their new varieties to the Canadian florists.

All flowers for exhibition should be addressed to the Montreal Gardeners' and Florists' Club, care Joseph Bennett, 136 Peel street, and it is suggested that flowers be sent early to allow them an opportunity to recoup after the journey before being judged.

"YOU NEED IT in your business"—The Florists' Manual, by Wm. Scott.

EVERY SUBSCRIBER is entitled to a 35 word want adv. free during the year.

CARNATION NOTES.

Carnations for Easter.

It is not too early to be thinking about your Easter crop of carnations. Easter will be only about six weeks away when these notes reach you, and if you begin at once you can do a great deal toward improving your cut for that day both in quality and in quantity. The plants will be making a strong growth now and to help them to finish off with good, large blooms they will need more or less feeding, according to the condition of the soil, and especially if they have bloomed a good deal during the winter.

The shoots that are to produce the Easter blooms should be lengthening out pretty freely now, in order to be in bloom by that time. Varieties that are in full crop now will likely be off-crop by that time, but those that are just between crops now can be depended on for a good cut by that time. For instance, our White Cloud, which is in full crop now, will not give us many Easter blooms, but our Flora Hill, which is just between crops, will be in full bloom again by that time.

That reminds me of how well these two varieties work together. Each is at its best when the other is at its poorest stage, and if they are handled properly you can have a steady supply of highest grade white the year round with only these two varieties. If we could combine the good qualities of these two varieties into one variety we could surely have a breadwinner. If in a week or two you think your crop is not coming on as fast as it should, it will do no harm to raise the night temperature a few degrees, providing you give plenty of air on all favorable occasions. The sun is so much stronger, and even on cloudy days the light is stronger than it was a month ago. There will be but few days when you cannot give some air during a part of the day, and by being liberal with air and food you can keep the growth strong and solid.

Better begin a mild form of forcing a month before Easter rather than to crowd them too hard during the last week or two and perhaps ruin your plants for future blooming. Easter is your last chance for high prices, and you can hardly afford to be off-crop then, but it does not pay to ruin the plants even then, because good carnations are profitable way up to June and later.

Watch the Supports.

Keep them well supported. Some of them may be growing too tall for the supports and will need another, a taller support of some kind, or perhaps the numerous shoots will be growing up outside of the supports and you will need to go over them occasionally and put them back into the proper places. You cannot expect to cut blooms with long straight stems if they are not supported upright. They are bound to grow

crooked if they lie all over the bench. Do not neglect dislodging, however busy you may be with other work, and do it as soon as the buds are large enough to handle safely. I know that nearly every grower is crowded with work now with his spring stock and often we think we can let such jobs as dislodging wait a few days while we do a lot of repotting, etc. The few days run into a couple of weeks and before we know it the buds are opening up and a crop of good blooms is just about ruined. If your carnations are doing well it would be poor business to allow them to go down in quality in order to put in your time on some other crop on which you expect to realize at some future time. We find that it pays to keep the quality right up to the highest possible point until we are ready to throw them out or, in other words, it pays to throw them out as soon as they cease being profitable. Then you will not be wasting any time watering and merely keeping alive a lot of plants that are bringing in no money.

Those who grow spring bedding stock can use all the room they can get hold of from now on, and any bench that is in poor shape now might just as well be thrown out and used for more profitable crops. If you grow no spring bedding stock you can make good use of the room for your young carnation plants. If you can plant out of 3 and 3 1/2 inch pots, instead of 2 and 2 1/2 inch, it will pay you well to do so, especially if you want to house them early in the summer.

You will find lots of young weeds springing up now, and you must keep the benches clear of them. Most weeds are rank growers and strong feeders, and it does not take them long to impoverish the soil and leave little food for the blooming stock. A. F. J. BAU.

THE MARQUIS.

Your correspondent, A. F. J. Bau, speaks of the Marquis as a late variety. We have been picking Marquis since September with a constant and increasing crop to date and which will continue to increase till Easter when we shall have simply an immense crop with plenty of flowers thereafter until the plants are thrown out.

The Marquis makes absolutely nothing but flowering wood; therefore if it grows in flowers, it will flower as early as the grower permits. Of course this presupposes proper soil and other conditions as well as proper care. If Mr. B., or anyone else, has found the Marquis late it is because of improper treatment or conditions.

I will add that we finished planting the first house of Marquis Aug. 18th. Had they been housed by Aug. 1, we would have had flowers still earlier. After filling our orders for about 170,000 rooted cuttings we took what were left—practically the culls—were late in planting out, experienced the driest season for ten years, and consequently housed plants only about half size. Our Marquis have been earlier and more prolific than any other variety we grow.

Because a grower does not succeed with a new variety the first time trying he should not condemn it, especially if others do succeed; but rather should seek to learn the proper conditions and methods of culture required by that variety. I will take occasion to give, at no distant date, in detail our method of culture for the Marquis.

L. E. MARQUISEE.

NEW CARNATIONS.

We present herewith engravings from photographs of two more seedlings grown by Mr. Peter Fisher, Ellis, Mass. These two, in addition to the three illustrated last week, will be shown at Baltimore, making five new sorts of great promise. Mr. Fisher's descriptions follow:

No. 130 is a white ground penciled with pink; very chaste. A free, vigorous grower and bloomer; 3 1/2-inch flowers on long, wiry stems; plant exceedingly healthy and of fine habit.

No. 270 is until the dull days of winter one of the very best pure white sorts. In the dark season the center is marked and shaded with pink; very chaste and a ready seller. The blooms run from 3 to 3 1/2 inches, are of fine form and borne on stiff stems. It is very early and free and promises to be a summer bloomer.

MY EXPERIENCE WITH CARNATIONS DISSEMINATED IN 1900.

BY JOHN H. TAYLOR.

(Read before the New York Florists' Club.)

The century closes with a distinct advancement in the quality of the carnation; in fact, the new century is heralded in by what may prove to be an entirely new class of the divine flower, approaching more and more to the Malmaison type, for how can we compare anything previously grown in this country to that splendid flower Prosperity. Here we find size, shape, vigor, constitution, and with all freedom of bloom. Seedlings from this carnation already show in a marked degree their parentage, and I have no doubt something very fine will be forthcoming from this carnation.

Boston has finally consented that the spikes and the rim of the universe shall after paying due toll enjoy with the Hub that grand flower, Mrs. Thomas W. Lawson. This is another carnation that stands in a class by itself. This fall, however, owing to its short stems, it has proved rather disappointing. This may have been due to the season or treatment, as I have seen it very fine in the fall in Boston. For a large flower it is very prolific, a good keeper and a very popular variety with the flower-loving public.

It requires very little tying, as the stems are very stiff and strong and are now of good average length. These two carnations mark a period of great advancement in carnation culture and come up very nearly to John Thorpe's prophecy of the four-inch flower.

We now come to four carnations which, although they cannot be classed with the two just mentioned, have great individual merits and may prove good paying varieties. The only one so far to show itself a winner is Genevieve Lord. Like one of its parents, William Scott, it is a strong grower, a free bloomer, with strong, long stems requiring but little support, in color a most delicate pink. As a market bloom it finds instant favor, showing the public appreciate its good

Peter Fisher's No. 270.

qualities. Its principal fault is the size of the bloom; with me it is no larger than Scott. As a commercial variety I should consider it one of the best.

Ethel Crocker. Here most of us have been badly disappointed. Whether it is due to soil, hot summer, or dull winter, we cannot tell, but so far she has proved herself a dismal failure. The flowers when perfect are beautiful, but the larger proportion come split, are one-sided and poorly colored. With me it is also very late and very shy—in fact, altogether too modest to give us the benefit of her charms.

The Marquis. A noble name and a most beautiful flower, very large and perfect, lacking, however, so far the necessary qualities to make him valuable as a commercial bloom. In constitution I have found him delicate; he is of a very retiring disposition and believes in short hours and half year's work.

Olympia, a beautiful flower, is delicate in constitution this season and so far has shown herself to be very loath to impart her favors.

These varieties, I believe, comprise the cream of this season's introductions; they are all an advance type and may next year prove to be all that was claimed for them by their introducers. To give an illustration, how little can be judged by a one year's trial of a novelty which as a rule is weakened by over-propagation, we will take Mr. Ward's General Gomez. Most carnation growers discarded it in favor of General Macco, and even Mr. Ward has only a small bed of it now. Yet if Mr. Ward should never give us another carnation he would deserve the thanks of all lovers of carnations, especially the grower, for here we have what was badly needed, a crimson carnation with constitution, size, a profuse bloomer and one of the best sellers. It is therefore wise, gentlemen, not to be in too much of a hurry to decide on the merits of new favorites. Study their habits and find out if possible the conditions best suited to their taste in order to bring out their best qualities.

In concluding, I think, from what little I have observed since coming back to growing carnations, that the varieties we are growing are like the thoroughbred horse, dog or any other animal brought to great perfection. They need good shelter, and the most intelligent care, if weakened by improper culture they are easily attacked by all forms of disease. In other words, they cannot stand rough usage, neglect or too much forcing. Give them good care in the propagating bed, in their treatment before planting and do not lift or plant them as if they were so many weeds. The carnation of today will pay you well if properly handled, and I have no doubt in a few years the plan of growing carnations will follow the chrys-anthemum and the violet.

AMERICAN CARNATION SOCIETY

The American Carnation Society holds its annual convention Thursday and Friday of this week in Baltimore. A full and complete report of the proceedings, together with numerous engravings from photographs of the displays at the exhibition, will appear in our next issue.

CHICAGO.

The Market.

There is little change from last week in market conditions. Shipping trade has been good and local demand has also improved so that the supply is being well taken care of and prices are firm. There were heavy demands from the south during the week on account of Mardi Gras, which helped materially. At the same time white continues in best demand indicating a continuance of the call for funeral flowers.

Up to time of this writing the advent of Lent has made no noticeable change in conditions and the feeling is general that the Lenten season has yearly less influence in curtailing demand. On Tuesday of this week ten roses were bringing from \$8.00 to \$10.00, the best

fancy carnations \$1.00, good fancy \$3.00, and good ordinaries \$1.50 to \$2.00. It is thought that the present cold snap will probably shorten supply somewhat so even if demand does fall off during the early days of Lent there is no danger of a serious surplus. Of Beauties there are none too many long and medium but plenty of short. Smilax is scarce.

Various Items.

At the meeting of the Florists' Club last Friday evening papers were read by Edwin A. Kanst and Emil Buettner, which will be found elsewhere in this issue together with the discussions on same. Mr. Kanst was elected a member of the club. Mr. Challenge Ventilator Evans was a visitor.

During his remarks Mr. Buettner criticized the retailers for not stimulating the sale of flowers by presenting them to the public in a more attractive way, and it was decided to take up the subject at the next meeting. Mr. Buettner finally promising to be present and give his views at length for the benefit of all. No doubt the retailers will improve the opportunity to present their side of the case and an interesting session is assumed. The program for next meeting also includes papers by Edgar Sanders and August Dresel on the progress in the trade during the last twenty years.

It is reported that a leading society lady recently sent a request to all the principal florists for samples of flowers they would recommend for decorating a luncheon table. No one got the order but the society lady managed to make an effective decoration from the samples. This evidence of thrift has made a deep impression upon the victims and future requests for "samples" will be treated with cold suspicion.

Weiland & Risch will move into the basement of 59 Wabash Ave., May 1 and will have about three times their present room. Including present and prospective tenants this basement will have a total of seven wholesale establishments that can be visited by passing from one to the other.

Weiland & Risch have contracted for material for building four new houses each 33 1/2 x 200 feet. They will have Garland iron gutters, the mowmower will be supplied by the Jno. C. Moninger Co., and the ventilating apparatus by the Quaker City Machine Co. Construction will commence as soon as frost is out of the ground.

By the way, the best price obtainable now on A glass is \$4.68 per box, and the best price on 4-inch cast iron pipe is 43 cents per foot.

Mr. E. E. Pieser, of Kennicott Bros. Co., is again under the doctor's care. There has been considerable illness among the craft this winter.

Larry Kelly is now in the newspaper business as a side issue, being business manager of a paper published in the interest of the Royal League.

GOLF ALL WINTER IN FLORIDA.

The distance only 32 hours if measured by the Chicago and Florida Special, which leaves Chicago Union station 12:00 noon Tuesdays and Fridays via Pennsylvania Short Lines. This elegant new train of Pullman dining, sleeping and observation cars is only one night on the way. For special information apply city offices Pennsylvania Lines, or H. R. Derling, A. C. P. Agt., 248 South Clark street, Chicago.

PHILADELPHIA.

Various Items.

Business fairly hummed last week. Stock was more plentiful, despite the cold. Thanks to glorious sunshine, the quality was way up, there being a crispness and vividness about the colored flowers that did one's heart good to see. Prices tumbled all at the same as the week before, with very heavy business. The exceptions were Beauties and bulbous flowers. The former were not especially in demand, and prices fell in consequence of rather increased supply; while tulips and daffodils were a little overdone, chiefly in the commoner sorts, fancy grades going well. St. Valentine's day helped the violet market in a way that was much needed. The second assembly brought out more choice bouquets than for several seasons. Sweet peas are becoming more plentiful and can be had with reasonable certainty from now until the close of the season. Lilacs have been quite a factor.

The plant market has been fairly brisk. The strong sunshine has improved the quality of the blooming stock, which is now quite profuse.

The air is full of rumors of changes. So-and-so won't grow this next season, but he will grow that, we are told. This is a good sign; it shows that the days of careless business methods among the growers are fast going. Records are kept and acted upon. Another point of interest is that the large growers are more than ever becoming specialists. It is not rose or path-grown now, it is grower of two or three kinds only of roses, or a like number of varieties of palms that we see about us. How far we can safely travel on these lines is a problem.

PULL.

BUFFALO.

There is little of any great moment happened in this quiet town of late. We escaped the great storm that has visited our state from Lake Ontario to the Pennsylvania line and from Rochester east to Albany, but we felt the effects of it several days, for trains were delayed many hours and in some cases abandoned.

Valentine's day caused a ripple in the demand for violets, several of the Main street stores entering the love-stricken of both sexes with beautiful little boxes of flowers. A large, healthy heart pierced with an arrow was the favorite design. A few years later a pair of pants with empty pockets will be more emblematic for most of these serious cases.

Prof. John F. Cowell leaves for the West India islands about the 21st. His destination is Jamaica and Porto Rico and perhaps Cuba. I hope he will find some good subjects for his fine houses. He intends to take a good supply of snake-bite antidote, which, if of the right quality, will also save him from malaria and yellow fever.

We had a visit yesterday from Mr. J. D. Eisele and Mr. Strohlein, of Riverton, N. J. Most of the day was spent at the Pan-American, and nearly every part of the ground was tramped over. There is such a mantle of snow covering the grounds that the landscape features have to be imagined, but every visitor now is charmed with the architecture and coloring of the many beautiful buildings.

Mr. J. C. Spencer, of Utica, and another florist friend whose name I am sorry to have forgotten, arrived this

morning just for a look over the Buffalo establishments. As I found at noon that Mr. Palmer was taking them out to his large place their journey will be repaid, for Lancaster is now producing some grand roses and carnations.

This whole western New York will not, I believe, contribute anything to the great show at Baltimore except our friend Manigault. I hope he will be there to make his "Mark us see" (not original).

Among carnations that you don't hear much about, but which is acting remarkably well with us, is the pure white good flower "Peru." Keep your eye on it. We shall go live strong to the city of forty hills and look forward to the exhibits and things very much. W. S.

BOSTON.

Trade Conditions.

The cold weather near the beginning of the week produced its effect quickly in shortening floral crops, which for a few days previous had seemed to have a decided leaning toward "expansion." Even violets felt the effect, and if there is any glass-grown crop that was able to stave off the feeling of contraction it must be the yellow bulb material which is arriving in very generous shipments. But there is no decided stringency in any part of the business, and at the present time (Saturday, February 16), a decidedly warm wave is arriving, so that the coming week will not in the least lack for flowers of any kind. St. Valentine's day helped much in emphasizing the moderate cut of blossoms by its large demand for everything, and especially heavy use for violets, and florists, themselves, did not send flowers for valentines in all cases, as proven by the fact that one young floral artist painted "You are a" upon a card, fastening underneath a live four-inch lobster, and dispatched the whole combination by messenger to another florist for whom he felt the corresponding degree of affection. The language of lobsters seems to be as expressive as that of flowers.

Various Notes.

The Liberty rose, of which little has been seen for two or three months, has begun to make its presence seen (and smelled) in the market. The present representatives wear rather short stems but superb blossoms. But their appearance somewhat perplexes the Meteor except in those cases where the better keeping qualities of the latter come into play. He generally predicted that the new one will not be able to displace the old as a general all-the-year favorite, however.

Comprehensive circulars concerning the March 9th exhibition at the Park street market are out and should be in the hands of every live grower.

The new positions of our wholesale establishments create a new paradox in the already intricate meshes of the business. In order to reach either one of the two of them you can go down Franklin street to Hawley Street. A turn to the right takes you to McCarthy's, where you can't get left, and a turn to the left for an equal distance takes you to Sutherland's, which is also right. You will note it is a case where you must "be not thy right hand know what thy left hand doeth." Both of them are in greatly improved quarters, Mr. McCarthy having moved his spacious offices to make more available room.

The need of two phones at the Park street gardens is thoroughly proved by the regularity with which one rings while the other is in use. By the way, Sutherland's old number of "Boston 1270" has been transferred to the line at his new place in order to save us all the trouble of memorizing a new one.

J. S. MANIER.

ST. LOUIS.

Club Meeting.

The regular monthly meeting of the St. Louis Florists' Club was held on the 14th, with twenty members present. It was by far the most interesting meeting the club has held for some time. The show of roses was a failure owing to the shortage; all growers seem to be off-crop. J. F. Ammann, of Edwardsville, was the only exhibitor for the prizes, he showing a fine vase of Brides, Mails and Perles, which was given the first prize, Albert F. Tesson had on exhibition a fine vase of Golden Gates, which was given special mention.

The exhibition committee made its final report and was discharged with thanks. A letter was read from Secretary Herr inviting the members to attend the carnation show to be held at Baltimore this month. A letter was also received from W. C. Jay, secretary of the Toronto Florists' Club, asking for information in regard to making its meetings more interesting to the members. Our secretary was instructed to write our Toronto brothers how we do it.

The office of one trustee was declared vacant and Dr. A. S. Halsted was elected to serve out the year.

Mr. Benke read his essay on "Some Requirements for the Elevation of Our Business," which appears elsewhere in this issue. The other essay was by F. C. Weber on "Cut Flowers for the Florist—Use Other Than Chrysanthemums, Roses and Carnations." Mr. Weber was not able to be present, but sent his essay down and it was read by one of the members of the club. The two essays were well received with a vote of thanks.

At the next meeting of the club essays will be read by Carey Sanders, Robert F. Tesson and H. G. Boring. These will no doubt be very interesting and should bring out a large attendance.

Question Box.

The question box brought out a great discussion on the question of "How Are Liberty Roses Doing?" Messrs. Ammann, Fillmore and Guy thought it a grand rose, worthy of further trial, though at present they say it is a great restorer. Mr. Guy said Frances Jossel was the best pink carnation, much better than Scott and that better prices were obtained for it. Messrs. Ammann and Emmudt were of the same opinion. As to Cracker and Lord, they claim that Lord is much the better of the two. In the discussion on Harris-ii lilies for Easter, all claimed that the loss would be about 8 per cent.

Mr. H. G. Fide was asked how his new white seedling carnation was getting along and replied that he would have to discard it, owing to rust. Mr. Emmudt got up and congratulated Mr. Fide for not putting it on the market to soak some poor unfortunate brother florist.

The next meeting of the club will be a miscellaneous flower show, which will be

Business of late has been very good. There has been a decided scarcity of good Brides, Meteos, Bridesmaids, and Beauties. At present they are coming in better owing to the fine warm weather we have been having the past week. Thursday, St. Valentine's day, was exceptionally good for the florists, nearly all of whom were busy. Commission men say the same, they having plenty of shipping orders which kept them late at night. This morning (Monday) found only a limited supply of roses coming in, which were all disposed of in short order.

The Market.

Beauties are still \$3 and \$4 per dozen for the choice ones; Meteos, \$5 to \$10 per 100; extra fine Brides and Maid-ling \$8 and \$10, 50 cents from \$4 to \$6; Perles, \$3 and \$4; Golden Gates, \$8 and \$10; Woodtons, \$5 and \$6.

Carnations have shortened up a little; still plenty come in. None of the fancy ones are sold under \$3, but the bulk of the stock is sold at \$2, with the demand heavy. Flora Hill and White Cloud take the lead in white, with Joost and Scott in pink. Daybreak always sells well, and Crane has the call in red. In bulk stock, Romans have shortened up somewhat and sell at \$2 and \$3; paper whites, \$2; freasias, \$1.50; tulips, \$3; valley, \$3 to \$4; Harrisii, \$2 per dozen; callas, 10 to 15 cents each; daffodils, single and double, are selling slowly at \$2 and \$4.

Violets are coming in fine and are plentiful. Best Californias bring 40 cents; Princess of Wales, 30 cents; but can be bought much cheaper in 1,000 lots. The southern violets don't sell well long side of the home grown stock and are sold for almost nothing. Quite a few sweet peas are coming in, but they sell slowly at \$2 per 100. Adiantum, asparagus and smilax sold well the past week owing to a number of large dinners, weddings and receptions that are taking place now just before Lent sets in.

Notes.

Fred Huicke has opened a floral store at 4579 Evans avenue. He is no relation to Bill Huicke of Belleville.

Mr. E. Eschner, of M. Rice & Co., Philadelphia, was a visitor the past week. Mr. Eschner is well satisfied with the business on his present trip.

Martin Reukert, representing H. Bayerdorfer & Co., Philadelphia, is in town selling florists' supplies.

Quite a few of our florists are having some trouble with la grippe, among those most affected are Charlie Kuehn, Henry Berning, John Kunz, Frank Fillmore, Robert Bayer, and your correspondent.

Bowling.

The bowling club rolled four games Monday night, only six members being present. Our visitor was E. W. Guy, of Belleville, who rolled four good games. Kuehn, Miller, Sanders and Ellison are laid up with the grip and could not be present. The first meeting night in March will be ladies' night, and all members are requested to bring the ladies. Refreshments and bowling will be the order of the evening. The scores of Monday were as follows:

	1	2	3	4 Tot. Av.	
J. J. Bencke	127	149	132	125	435 158
E. W. Guy	134	142	136	157	569 186
Will Adair	135	125	133	151	544 171

Special Bargains.

We are headquarters for the following:

- All plants quoted from 2 1/2 in. a pot except where noted.
- Asparagus Plumosus Nanus, \$3.50 per 100; \$3.00 per 1000.
- Asparagus Sprengeri, \$2.50 per 100, \$20.00 per 1000.
- Acala S. Salteri and Triumphans \$1.00 per 100, \$25.00 per 1000.
- Azaleas, 12-inch heads, best varieties, \$1.00 per dozen.
- Boston Ferns, \$1.00 per 100; \$25.00 per 1000.
- Crotons, finest assortment, \$1.00 per 100, \$25.00 per 1000.
- Calla Lilies, blooming bulbs, 75c per dozen, \$6.00 per 100.
- Cannas, all the leading varieties, well established in pots, \$5.00 per 1000.
- Camellia Japonica 20 inches in height, assorted colors, 20c each; \$1.00 per dozen.
- Coleus in all the leading varieties, \$2.50 per 100, \$20.00 per 1000.
- Geraniums, double and single varieties, the very best, \$3.00 per 100; \$25.00 per 1000.
- Hibiscus, 10 sorts, \$2.50 per 100.
- Heliotropes, \$2.50 per 100, \$20.00 per 1000.
- Ponderosa Lemons, bears fruit two pounds and up, in ideal pot plant. It blooms and fruits when quite small, \$1.00 per dozen, \$7.00 per 100; \$60.00 per 1000.
- Chalcite Orange, \$3.00 per 100; \$25.00 per 1000.
- Moon Vines, \$3.00 per 100.
- Ruellias, the two new sorts, \$2.50 per 100.
- Smilax, \$2.00 per 100; \$17.00 per 1000.
- Salvia splendens, \$2.50 per 100.

Lemon Verbena, \$2.00 per 100.
 Tuberoses, first class bulbs, 75c per 100, \$6.00 per 1000.
 Roses, all the leading varieties, Teas, Hybrid Teas, Climbers, from 2 1/2 inch pots, \$2.50 per 100; Hybrid Perpetuals, \$1.50 per 100.
 Strong roses from 4-inch pots, 1 cent.
 Hybrid Teas, 10c Climbers and Hybrid Perpetuals, 12c.

THE GOOD & REESE CO.,

THE LARGEST ROSE GROWERS IN THE WORLD. SPRINGFIELD, OHIO.

Mention The Review when you write.

CADILLAC, MICH.

About 100 miles north of Grand Rapids, on the G. & A. railway, is situated one of the loveliest cities of its size in Michigan. Formerly a great pine lumbering district, the vast quantities of hardwood in this region are now being cut and manufactured, one of the largest hardwood flooring factories in the world being located here.

Although a city of more than 6,000, little interest has been taken in floriculture until recently. The short seasons do not yield profitable returns for the labor expended. Taking advantage of disadvantages, the local florist, A. W. Tweedie, is building up a good business. During the past season he has firmly planted his feet in a very desirable location and is constantly being improved his new quarters. His houses are at once unique as well as substantial structures. Becoming possessed of several thousand photographers' negatives, he has converted them into serviceable material at about one-tenth the expense of new glass and without any assistance has constructed all his buildings.

His stock consists of miscellaneous plants in good condition. To supply the out-flow trade he ships his stock from Grand Rapids, and "they say" Grand Rapids florists will have to get a hustle on them if they improve on the floral designs turned out by him. However, he speaks a good word for the quality of stock furnished him by Crable & Hunter. He will grow his own carnations another year.

One would expect to find great quantities of snow here, but Cadillac has escaped the big storms thus far, and only has enough of the beautiful to make good sleighing. Rod.

Burpee's Seeds Grow

Malcolm Lamond

THE RED CHRYSANTHEMUM THAT DOES NOT BURN.

It grows 2½ feet high and is perfectly self-supporting; beautiful foliage, a splendid keeper and never shows a dull reverse color. Received the Chrysanthemum Society's Certificate and was awarded 91 points by the Philadelphia committee.

Price 35c each; \$3.50 per doz.; \$25.00 per 100.

JAMES NIVEN,

Thermal Vale Nursery, OAKLAND, CAL.

GRAND RAPIDS, MICH.

Various Items.

We are having some genuine winter weather, a heavy snow storm followed by 12 degrees below zero, and the cold has begun. After a period of excessive rainy cloudy days, we got two remarkably sunshiny ones and so strong was the contrast that the pink varieties of carnations faded and streaked perceptibly, even Lawson being affected.

Business continues remarkably good and there is such a scarcity of flowers, particularly carnations, that large orders cannot be filled at all and small mixed orders as close as the stock on hand will permit. White carnations seem to be in greatest demand and are consequently scarce; same in roses, white cannot be had for love nor money. The past week has been as busy as the holidays, particularly Valentine's day, with this exception, prices remained the same. While on the other hand it seemed more difficult to fill orders than at Xmas because there was less stock. The only flowers in large supply are bulbs and violets. Speaking of violets, the past winter has shown the value of the Imperial over Marie Louise and Favourite. It is the same color, requires the same treatment exactly, yet it is a stronger, sturdier growth, can stand more hardships than the other dark ones, produces just as freely, and far superior flowers on longer and better stems and just as soon as its qualities are understood by the violet growers, it will be the only dark variety grown.

Prices of flowers remain the same except in roses which are \$1.50 per dozen as a rule, rather than \$1; carnations, 35 to 50 cents per dozen; lilies, \$2 per dozen; Beauties, \$3 to \$5 per dozen, while violets range from 15 to 20 cents per dozen.

There has been a lull in the interest taken in the Baltimore meeting, hardly time to think of it, and it looks now as if but two would tear themselves away and attend, Geo. F. Crabb and Henry Smith will certainly go while Hanna and Chadwick will likely remain at home. Geo. F. CRABB.

OCEANIC, N. J.

Monmouth Co. Hort. Soc.

The fourth annual ball of the Monmouth County Horticultural Society was held in Red Mer's Hall, Oceanic, N. J., Friday, Feb. 15.

Rob. Beatty led the grand march at 9:30, in which ninety-two couples took part. The society's ball is always one of the great events of the season but this year's beat the record of any held in this vicinity. The upper twenty-five of Oceanic and surroundings were represented. At 12 o'clock 2000 sat down to supper. Hugh Birch did the concert set to perfection as usual; and when the band played "Home, Sweet Home," every one could find his home without a lantern. R.

NEW GERANIUM LITTLE PINK

Or Double Pink "Mars," one of the best novelties of the Mars family. The first double of this class ever offered to the trade. It is a very dwarf, bushy, compact and extra free blooming variety, not exceeding 4 to 6 inches in height. Its trusses a pleasing shade of bright pink, upper petals white at the base. Unlike Mars or America in color, it has no trace of salmon shading. Its miniature trusses stand erect, 3 to 6 inches above the foliage. It is excellent for bedding, for the border, or as a pot plant. Too much praise cannot be given this grand little pink variety. Price \$5.00 per doz., \$55.00 per 100. Half-tone cuts will be furnished free of charge for catalogue. Correspondence solicited. Orders booked now for fall and winter delivery. Received certificate of merit at the New York Convention of the Society of American Florists.

OMAHA.

The Market.

The florists are enjoying a very good run of trade, the demand being good for everything. There have been several large funerals during the week, and the demand on St. Valentine's day was unusually large. While flowering plants have not sold as well as during the preceding week, this fault can be laid to impassable streets, caused by the snow of the past week.

Quality remains up to the standard in roses and carnations, though the supply is not what it should be. Almost every day purchasers are turned away because of the lack of carnations and good roses. But this condition will not last long, as good stock is in sight and a little good weather will help us out of the difficulty. Prices have declined little from last week except on Valentine's day, when prices held better, with violets a little higher.

The trade today (St. Valentine's) has been away ahead of calculations, and it was almost impossible to get stuff enough to go around, even after preparing for a heavy trade. The greatest demand seems to have been for violets, and I venture that our little town got away with from 6,000 to 7,000 violets of all varieties; next in demand was naturally the carnation, but on account of scarcity buyers had to take roses, with Maidens and Meteors in the lead. J. B.

MANCHESTER, N. H.—On the 1st a fire started in the boiler room at A. G. Hood's greenhouse and burned out the end of five houses, doing damage to the amount of \$1,000 to the houses and stock. The houses were partially insured. In the spring Mr. Hood will build a modern range on Hanover street, having recently purchased ten acres of land on which he will build four houses each 20x25. He will also open an up-to-date flower store on Elm street.

DES MOINES, IA.—R. L. Blair reports that for St. Valentine's day there was a big call for red and pink roses and red, pink and white carnations. Not half the number of violets. Von Sions, Romans and valley sold as for the same day last year. Funeral work helped out somewhat on bulb stock. There was a considerable call for potted plants in bloom.

DAILLEDOUZE BROS., Flatbush, N. Y.

PITTSBURG AND ALLEGHENY.

Club Meeting.

The Pittsburg and Allegheny Florists' and Gardeners' Club met in regular session at the Pittsburg Cut Flower Co.'s store on Thursday evening, Feb. 14.

The following officers were elected for the ensuing year: President, Wm. Fallener of Schenley Park; treasurer, Fred Binkl, of Bellevue; secretary, our old stand-by, Langhans, of the Cut Flower Co.

There was an exhibition a vase of the new rose Queen of Edgely, which was donated for this occasion by the Floral Exchange. It brought out quite a discussion as to its color and usefulness for different classes of work, the majority of florists at the meeting thinking it not as useful as its parent, American Beauty, but still good as a new acquisition.

Mr. Blind had an exhibition a vase of Brides and Maids which were magnificent and brought out many words of praise; he also exhibited a vase of Marquis carnations, that were much admired, but it is a late bloomer.

Mr. A. M. Herr sent a vase of his Ethel Crocker, which was very fine.

Mr. Koenig, the bulb king, exhibited a bunch of tulip blooms, which were highly appreciated, they having good stems and foliage.

Mr. Chas. Siebert gave a very interesting talk on the old-country method of forcing Holland bulbs for Christmas, which was very attentively listened to.

Several of the members will take in the carnation show at Baltimore.

We have been frost-bound for two weeks, and fuel so expensive!

Business is fairly good, and stock is good, considering our sunless weather.

Subject for next meeting, "What I Know About Palms," by J. Baier.

Mr. Hofmeister, of Seattle, Wash., was a visitor.

The annual catalogue of Messrs. W. W. Barnard & Co., Chicago, has been issued. It contains 108 pages and has a very attractive cover engraved in half tone. In its pages are described and priced an exceedingly varied list of seeds, bulbs, plants and general horticultural supplies. The usual spring edition of the "Florists' wholesale list" has also been issued in which are offered at trade prices a full line of bulbs, dormant plants, seeds and general florists' supplies.

Grove City, Pa.—James Elmer Black, the well known florist, died Feb. 6, aged 42 years. He was a member of the Board of Trade and an elder in the Presbyterian church. A wife and three children survive him.

ELMIRA, N. Y.

The regular annual meeting of the Elmira Horticultural Society was held Feb. 11 in the lecture hall of Warner's Business School. The following officers were elected for the ensuing year: President, Prof. J. W. Roberts; vice-president, R. R. Stockdale; secretary, H. N. Hoffman; treasurer, Miss Flora Swift; executive committee, Messrs. George L. Gray, John R. Rudy, G. P. Rawson and Mrs. J. W. Morehouse and Mrs. Edward Kenney.

An interesting discussion took place on the plans for the coming season. In order to make the meetings as attractive as possible a seasonable topic will be considered at each meeting, papers will be submitted, discussion held and the subject will be illustrated by flowers when practicable. The question box will be a special feature of the meetings. These will be in charge of the most practical men obtainable, and cannot fail to be both instructive and interesting.

A lecture is promised in the near future by Rufus Stanley on "Land-cap Gardening as Applied to City Improvement." The March meeting will be devoted to topics relating to seed sowing, etc., with perhaps a show of the newer forms of carnations. An interesting paper by Mrs. Morehouse was read, and it elicited considerable discussion. The subject was "Bulb Growing," bringing out the methods of growing hyacinths and other bulbs, both in the house and out of doors. This was followed by a paper by R. R. Stockdale on the history of the different types of gladioli, a flower in which Mr. Stockdale has taken considerable interest. It is intended to hold exhibitions during the year of roses, sweet peas and chrysanthemums, if the public displays sufficient interest in them to warrant the trouble and expense. A membership ticket costs 50 cents per annum and this admits to all exhibitions, as well as to the monthly meeting.

HARDY PLANTS.

Something new. Gettysburg Apple tree by the thousands. It is a beautiful, strong, medium sized tree; fully bearing, what Professor Knapp, Michigan and Lucas call large, and the most delicious apple ever seen. This apple tree is found only in the north-western part of Germany and I was the first to bring it to America. Price: 12, \$5.50; 10, \$4.50; 8, \$3.50. New kind of prunus, Prunus Pissardi dwarf, fine fruited, very marcescent, flowers neat and frondous in leaves. Price: 12, \$9.00; 10, \$8.00; 8, \$7.00. Ch. Koehler, Fox Chase, Philadelphia, Pa.

HYDRANGEAS.

A superb new hydrangea, Hydrangea Hortensia Martiana. This is a grand, unique new variety, sent out by James H. Martineau, London, England, last winter, 1899-1900. It is named after their collector, Mr. Martineau, who introduced it, and described by them "as having remarkably very large sterile flowers, three inches in diameter, color a light pink, shaded mauve, and the finest specimens of Hortensia. This variety is most remarkable and distinct in pots." It is sure to be a success. We offer strong plants, 4-in. pots, 75¢ each; \$7.50 a doz. Also Deutzia Corymbiflora, a very distinct variety; Deutzia gracilis and Deutzia gracilis venusta, the Azalea Deutzia. Send for circular for price of these and other varieties. Cash with order, please. John Charlton & Sons, Rochester, N. Y.

IVIES.

 Price \$2.50 per 100; \$20.00 per 1,000, 500 sold at 1,000 rate. Not less than 5 of a kind. All stock guaranteed true to name. Packing free and always done in light and thorough manner.

R. H. MURPHEY & SON, Urbana, Ohio.

Our stock of Everblooming roses, all grown in 4-inch pots, is very extensive and finer than we have ever before offered our customers. All leading popular varieties for sale.

From open ground, we call your attention to our heavy blocks of Gen. Jacquemin, 2 1/2 in. strong, own roots; also such valuable climbers as Yellow Rambler, Steigera, Dawson, Climbing Hermosa, Grecille, Wichuriana, etc., etc. The new climber, Wm. C. Egan, can be supplied in strong one- or two-year-old plants at reduced rates. It is the best of Mr. Dawson's fine hybrids, and is in fact a climbing Malmaison, of the same form and color, and entirely hardy.

To clear leased land, we offer shrubbery in elegant assortment, at low rates for the thousands of Choice Box & Thomas, Manie Ave., Nurseries, West Chester, Pa.

ROOTED ROSE CUTTINGS. Bride-maid, Little-Melster and Perle, \$1.50 per 100; \$12.50 per 1,000. Golden Gate, \$1.50 per 100; \$12.50 per 1,000.

SAXIFRAGA.

Saxifraga umbellata. Fine for hanging baskets. Cases of 20 plants strong, \$3.00 per box, 10 by mail. See Mayer & Sons, Willow Street, Lancaster, Co., Pa.

SEEDS.

Burpee's Earliest of All is the Sweet Pea for florists. Notwithstanding its dwarf habit and neat slender foliage, the plants are of vigorous growth and come into bloom always first in the row in the garden of the Earl. Early Blanche Perry, which has been heretofore a week ahead of all other varieties. The flowers are large and the plants are regular strains of Blanche Perry, and have long stout stems, making them entirely satisfactory for cutting. All being one way. The standards are a bright, rich pink, while the wings are nearly white. The buds are of a delicate pink. It is not only the earliest to bloom in open ground, but is also the most desirable for forcing under glass for winter cut flowers. The dwarf habit of this variety renders it much more easily grown on the benches, admits of closer planting, and from seed sown during the latter part of August blooms may be cut during the holidays, while with the taller varieties no flowers could be had before February or March. Per pkt. 5 cts.; 2 or more at 5¢ each, 10¢ per lb.

W. ALFRED BURPEE & CO., 425-477 N. 5th St., PHILADELPHIA, PA.

Seeds of the genuine three-ovoid fruit-bearing SOULAMIN CAPESTRUM AN NITUM specially selected from a few of our best plants. Per 100 seeds, 50¢. Anton Schultze, College Point, L. I., N. Y.

Good & Keller, 122 W. 24th St., New York. Manufacturers of Wire Designs.

E. H. Hunt, 7-9 Washab Ave., Chicago.

KNOXVILLE, TENN.

The florists of Knoxville report that the past year has been a good year for them, although the increased cost of florist's material has lessened the profits considerably. It is rumored that a large wholesale rose growing plant is to be established here and it ought to be a success as this is a good shipping point.

Chas. W. Cronch is building a house for Brides, 150x20, which when completed will accommodate twenty-seven houses from 100 to 150 feet in length on his place. The new houses will be planted in solid beds, as he gets the best results this way. Two houses in solid beds have been standing two years, and the only fault he has to find is that the plants are a little more liable to mildew. In these houses, besides the hot water heating boiler, he has a small steam boiler which he can use early and late in the season, when it is too warm to make much heat but when one needs to keep the air dry and use a little steam.

Mr. Cronch likes the new rose, Liberty, though it has been inclined to flower on short stems for him. He thinks, however, he can overcome this by giving better soil. C. W. C.

GOVERNMENT FLOWERS.

I have read the report regarding free distribution of flowers by government officials in Washington in your issue of Feb. 14 and would like to say that the distribution is not limited to Washington alone. It extends all over the country. And not only flowers but plants as well are given to congressmen and their friends and others. The plants are as a rule not suited for house culture and do not last very long, so they hurt the trade very little.

M. D. METT'S SONS,
Mt. Vernon, N. Y.

WHITE SULPHUR SPRINGS, W. VA.—Mr. H. A. Catlin has returned from Colorado, where he spent the winter.

KANSAS CITY, MO.

Various Notes.

At last we have had a spell of real winter weather with twelve inches of snow, and it remained with us two weeks. It came as a blessing to this part of the country, for we have had very little moisture of any account since October. The month of January gave us twenty days of bright sunshine, yet it did not increase the supply of roses to any extent. There is a decided scarcity of all kinds of stock with the exception of violets, and so thoroughly is the market cleared up daily of all material, especially of white flowers, that the smallest Roman hyacinth becomes an important factor. We don't have to use the X-ray to locate business; there is plenty of it; an unusually high rate of mortality is giving us lots of funeral work.

For the Memorial Services held here for the late Queen Victoria, the floral arrangements were both beautiful and numerous. Arthur Newell being a native of England, received orders for the greater share of the work.

It takes all sorts of people to make trade; the invasion of the city by Mrs. Nation and her hatched brigade created a new fad and floral hatchets are now much in evidence.

When times are prosperous the florist surely gets his share of the public's patronage and that the love of flowers is increasing was again demonstrated from the amount of trade done here on St. Valentine's Day. The violet was the most sought for, there were plenty of them and I venture to say that better violets are not seen in any other part of the country than those now being picked by the growers of Kansas City.

Mr. J. M. Gasser, of Cleveland, Ohio, spent a few days with us recently and while here was the guest of W. L. Rock. He asked permission to go to Texas, promising to call again when homeward bound. Mr. Gasser was looking well and we are always glad to see him, for he is one of the few who are ever ready to give us the benefit of a lifelong experience in the business. H. J. M.

CHESTNUT HILL, PA.

Meeting of the Chestnut Hill Hort. Society.

The regular monthly meeting of the Chestnut Hill Horticultural Society was held on the evening of Feb. 12, Vice-President Fred J. Mitchell presiding. A number of new members were admitted and several proposed. The schedule committee reported good progress being made with the new schedule, and that the same would be issued before the next meeting.

Premiums were awarded the different exhibits, and the judges specially mentioned William Robertson's exhibit of cauliflower and a magnificent vase of Bride roses, and William Boyce's exhibit of asparagus.

The pots of Primula Forbesii exhibited by Frank Gould were also specially mentioned. H.

BURLINGTON, VT.—The Vermont Botanical Club held its annual meeting here Jan. 27. The program included many valuable papers. The officers for the ensuing year are: President, Ezra Brainerd; vice-president, Cyrus G. Pringle; secretary and treasurer, L. R. Jones

PAN-AMERICAN EXPOSITION.

The printed classification of exhibits and general rules governing exhibits, transportation, etc., of the Pan American Exposition, to be held in Buffalo this summer, has been issued.

Floriculture is in Division V and is classified as follows:

Group 25.

ROSES

- Class 87. Hybrid perpetual
- Class 88. Summer blooming
- Class 89. Tea
- Class 90. Climbing and creeping

Group 27.

PERLAGEONUMS

- Class 91. Show varieties
- Class 92. Fancy varieties
- Class 93. Zonal
- Class 94. Variegated and bronze

Group 28.

FLOWERING BULBIOUS PLANTS

- Class 95. Hyacinths
- Class 96. Tulips
- Class 97. Narcissus
- Class 98. Iris (Spanish)
- Class 99. Bellias
- Class 100. Gladioli
- Class 101. Crocus
- Class 102. Other bulbous flowering plants
- Class 103. Begonias

Group 29.

ANNALS

- Class 104. Sweet peas
- Class 105. Parsies
- Class 106. Asylers
- Class 107. Balsams
- Class 108. Helios
- Class 109. Other annals

Group 30.

BEDDING PLANTS

- Class 109. Flowering
- Class 109. Foliage

Group 31.

AUTUMN FLOWERING PLANTS

- Class 110. Chrysanthemums
- Class 111. Chrysanthemums

Group 32.

GREENHOUSE FLOWERING PLANTS

- Class 112. Greenhouse flowering plants

Group 33.

DECORATIVE PLANTS

- Class 113. Palms
- Class 114. Cycas
- Class 115. Ferns
- Class 116. Calladiums
- Class 117. Dieffenbays
- Class 118. Cydons
- Class 119. Abacrias
- Class 120. Anthurium
- Class 121. Other ornamental leaf plants
- Class 122. Ornamental grasses

Group 34.

ORCHIDS

- Class 123. Orchids

Group 35.

CACTACEAE

- Class 124. Cactaceae

Group 36.

AQUATIC PLANTS

- Class 125. Victoria Regia
- Class 126. Nymphaea
- Class 127. Nubium
- Class 128. Other aquatics

Group 37.

CLIMBING PLANTS

- Class 129. Hardy climbing plants
- Class 130. Tender climbing plants
- Class 131. Summer blooming climbing plants

Group 38.

WILD PLANTS

- Class 132. Native wild plants and flowers

Group 39.

PERENNIALS

- Class 133. Hardy biennials

Group 40.

SHRUBS AND TREES

- Class 134. Hardy flowering shrubs
- Class 135. Hardy deciduous trees
- Class 136. Conifers or evergreens

Group 41.

CUT FLOWERS

- Class 137. Cut flowers, floral designs, floral dried flowers and leaves

Group 42.

RECEPTACLES AND STANDS FOR FLOWERS

- Class 138. Receptacles for plants, flower hot plant boxes and tubs, fern cases, ferns, plant and flower stands, non-stand, non-germinating plant cases, ornate designs, etc.

Group 43.

APPLIANCES, METHODS, ETC.

- Class 139. Hot houses, conservatories, methods of construction, management and operation
- Class 140. Heating apparatus for hot houses and conservatories
- Class 141. Seals, chairs and adjuncts for the garden and conservatory
- Class 142. Ornamental wire-work, trellises, fences, borders, labels for plants and trees
- Class 143. Garden and nursery administration and management
- Class 144. Floriculture and arboriculture, a text of design and decoration, landscape gardening, designs for summer (all weather), nurseries, greenhouses, and the practice of treatment of water for ornamental purposes, gas-works, reservoirs, lakes, fountains and the treatment of lawns
- Class 145. Garden construction, building, rockwork, gratings, rustic construction and ornament for private and public grounds, planting, fertilizing and manures

Group 44.

LITERATURE

- Class 146. Literature, history and statistics of floriculture

IN A recent issue of the St. Louis Republic appears a portrait and an account of the life of Dr. George Engelmann, the famous botanist, who made St. Louis his home from 1835 until his death in 1884. One of the treasures of the library of the Missouri Botanical Garden is a collection of sixty volumes containing the notes and memoranda made by Dr. Engelmann of his botanical labors.

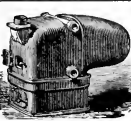

MACON, GA.—The disease known as Cerozoora violae has been discovered on violets in this vicinity. A report from the authorities at Washington is that no practicable remedy for this disease has been found except to cut off and burn all affected leaves to prevent its spread.

OCEANIC, N. J.—The Monmouth County Horticultural Society will have a permanent exhibition at the Pan American Exposition in Buffalo the coming summer.

EVANSVILLE, IND.—Jno. C. Ellspermann has been laid up with pneumonia since Jan. 15, but is now convalescing.

COLUMBUS, O.—Fire did about \$300 damage to the greenhouses of the Livingston Seed Co., Feb. 9.

BLOOMINGTON, ILL.—William Longworth, a pioneer nurseryman, died Feb. 14, aged 78 years.

GALESBURG, ILL.—E. R. Gesler has as-
sociated with him in his business Mr. H.
F. Drury, of this city, with the intention
of doubling the present capacity of the
greenhouse plant to meet the increasing
demand for cut flowers. The new houses
will have iron gutters and iron posts
and will be designed especially for grow-
ing fancy carnations and roses. The firm
name will be Gesler & Drury.

Awarded the only first-
class certificate of merit
by the Society of Ameri-
can Florists, at Boston,
Mass., Aug. 21, 1890, for
Standard Flower Pots.

HAMMOND'S SLUG SHOT.

1901

Destroys Pests which prey upon Vegetation in the GREENHOUSE, CONSERVATORY or GARDEN.

SLUG SHOT is a composite powder not dependent solely upon any one of its parts for effectiveness. For 21 years SLUG SHOT has been used, doing effective work against Leaf Eaters, Juice Suckers, Sow Bugs, Snails or Grubs in the soil. SLUG SHOT is spread by duster or blower. Water will carry it through a sprayer or pump. It destroys in this way elm tree beetles, caterpillars on trees. Where Snails or Sow Bugs are troublesome, dust SLUG SHOT on the soil with a duster. SLUG SHOT kills fleas, calves and dogs of lice and fleas. SLUG SHOT is put up in tin perforated screw-top canisters and cartons holding one lb. The 5-lb. package (see cut) retails at 25 or 30c each, larger packages at less rate. SLUG SHOT is

Sold by the Seedsmen in all parts of the United States and Canada.

GRAPE DUST for mildews and blights.

SOLUTION OF COPPER against fungus of all sorts.

If you want a new Boiler this year, let us give you a figure on one now.

Prices of steel may advance later on the same as has been the case with Glass.

Will book your order at present low prices, and deliver the Boiler any time you want it next spring or summer.

Heat

NILES CENTRE, COOK CO., ILL., March 20, 1894.

Messrs. Kroeschell Bros. Co., Chicago, Ill.

GENTS: Those two boilers you made for me are the best I ever used. I have used more than twenty different kinds of boilers, and never saved so much fuel as I did this winter with your boiler.

Truly yours, F. STIELOW, Florist, Niles Centre, Cook Co., Ill.

Messrs. Kroeschell Bros. Co., Chicago, Ill.

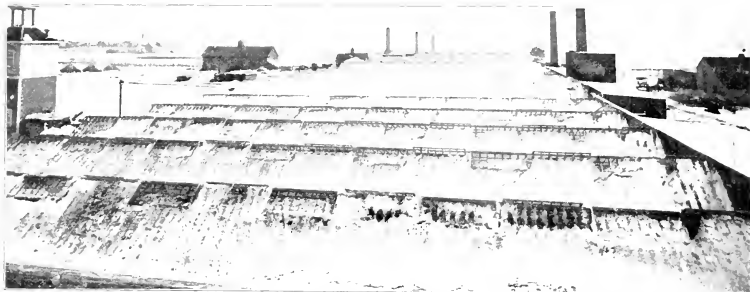

EVANSTON, ILL., March 20, 1894.

DEAR SIR: Replying to your favor, would state that I have in use three of your Improved Green House Boilers, which I had been had for five years. Before purchasing yours I had been using the Devine Boiler. I like your boiler better because it has water front and water back, which allows no heat to escape. The saving of your boiler in fuel as compared with other boilers is about one-fourth. Your boiler is easier to run than other boilers.

Yours truly, M. WATLAND, Evanston, Ill.

The Snow Question.

THE recent heavy snow storm in Chicago and vicinity gave us an opportunity to get some photographs showing just how the **GARLAND IRON GUTTER** affects snow on greenhouse roofs.

How the Snow Laid on the Wooden Gutter Houses.

How the Snow Didn't Lay on the Garland Iron Gutter Houses.

(These photographs were taken the same day and the same hour).

Above are two reproductions of two photographs taken at the same time at the establishment of Messrs. Wietor Bros., High Ridge, Chicago. The first shows the old style houses with wooden gutters and the second shows houses with the **Garland Iron Gutter**.

At first it seems incredible that an iron gutter could make such a difference, but not when you stop to think. Iron is a good conductor of heat and wood is not. The iron gutters absorb enough heat from the inside of the house to start melting at once the snow falls, no matter how severe the weather. Wood doesn't absorb enough to have any appreciable effect.

If you are interested in this matter write for further information to

Governor Roosevelt (Ward). The finest crimson to date. The flower is full, having a large number of petals which are so perfectly and regularly arranged that the periphery of the flower produces a perfect semi-circle. The size averages fully three inches in diameter through the season. It is a vigorous healthy grower, the foliage being of that rich glaucous green color that characterizes our most vigorous and most productive carnations. Awarded National Society's Certificate, **93 points**.
 Price, \$2.50 per doz.: \$12.00 per 100; \$100.00 per 1000.

Golden Beauty (Ward). Clear lemon yellow, slightly tinged with pink at the edge of the petal. Habit very similar to Gold Nugget but a stronger, more vigorous grower; well worthy of a thorough trial. Stock limited.
 Price, \$2.00 per doz.: \$12.00 per 100.

Lorna (Dorner). Flower pure white, fragrant, being three and one-half inches in diameter. Comparing it to White Cloud, its parent, it shows a decided improvement, having a more compact and stronger growth. It is a pure white, and also an earlier, freer and continuous bloomer.
 Price, \$2.00 per doz.: \$10.00 per 100; \$75.00 per 1000.

MR. WM. MUNRO, ONE OF THE JUDGES
APPOINTED BY THE PHILADELPHIA FLORIST CLUB TO JUDGE
OUR GRAND NEW ROSE

Queen of Edgely

PINK AMERICAN BEAUTY.

Writes—December 31, 1900, as follows:—

"Having had the pleasure of visiting your greenhouses and seeing—for the first time—your new rose 'Queen of Edgely' growing on the plants, I should like to say that my first impression as regards its sterling worth has been greatly strengthened. At the time of my visit it was a sight worth going a long way to see, having stems 6 to 8 feet long. With its luxuriant foliage, exquisite color and fragrance, large size of bloom, together with its free budding qualities, I consider it a grand introduction and a money maker for all growers of American Beauty Roses."

Lansdowne, Pa.

Truly yours, WM. MUNRO.

The American Carnation Society

THE BALTIMORE CONVENTION.

The Exhibition.

The Baltimore convention of the American Carnation Society was a most enjoyable and instructive meeting and the exhibition showed the usual progress in quality of exhibits. The exhibition is decidedly the most valuable feature of these annual meetings and a trip around the exhibition hall is alone worth the time and expense of attending the convention. The hall was of good size and was well lighted and there was abundant opportunity to inspect the various candidates for public favor and compare them with the splendidly grown blooms of standard varieties in the general classes. These last were undoubtedly most educational, as showing what the skillful grower can do with the varieties already in commerce.

It was necessary, though, to do this the morning of the first day, as after that time the hall was so crowded with local visitors that careful inspection was impossible. No admission fee was charged, but cards of admission were required. These had been issued in large numbers by the local florists and the hall was at one time so packed that further admittance had to be denied until the number in the hall had thinned out. It was no doubt a grand help in the education of the public as to the merits of the carnation, but interfered materially with the observations of the trade visitor. We are inclined to think it will be wise in its future reserve all of the first day to the men in the trade who have traveled sometimes long distances to inspect the flowers displayed. It would be a mistake to exclude the public entirely, but the first and most important object of the exhibition should not be lost sight of, or the opportunities of the trade visitor curtailed.

Among the flowers on display the Lawson seemed to stand out most prominently and some superb blooms were shown, notably those from Mr. Peter Fisher, the originator. We were more than ever convinced that the Lawson has come to stay and that it will long

hold a prominent position among standard sorts. Weber & Sons' Norway, as a white, made a most agreeable impression, and we heard it commented upon favorably by many good judges. Witterstaetter's Adonis and Estelle attracted attention, and he had several promising seedlings also. Mr. C. W. Ward made a very large display and his flowers were a prominent feature.

Several very excellent seedlings were shown by Isaac H. Moss, of Baltimore, and his case of 100 Roses was probably the most prominent variety on display. The classes of Queens and Marquis were an important factor among the light pinks. The case of Frances Joost, of Philadelphia, was naturally a great attraction, and some of the splendid blooms was shown by the Chicago Carnation Co. made its only display of fine blooms, but the display unfortunately suffered from the long shipment. Victor Bros., Chicago, showed a vase of fine blooms of their prize variety of Armazindy.

Some superb blooms of Liberty were shown by Isaac H. Moss, of Baltimore. We have never seen this rose in better form. It is evident that Liberty can be well done at other places than West Hoboken, N. J. Mr. Moss also showed some splendid blooms of Golden Gate. These flowers may be seen in the same picture with the carnation basket in this issue. A vase of white Golden Gate roses shown by the American Rose Company, Washington, D. C., attracted much attention. The blooms were immense. It is identical in form with Golden Gate. This vase may be seen in one of the pictures to the right of the carpet bedding design.

The carpet bed shown in one of the engravings represents the coat of arms of the State of Maryland and was arranged by Mr. Charles L. Seybold, superintendent of Patterson Park, Baltimore, whose portrait appeared on page 352, of our issue of Feb. 14. It was well executed and attracted much attention.

The pictures in this issue will give a good idea of the extent and quality of the exhibition and we will let the judges' awards tell the rest. The judges of seedlings were Messrs. P. O'Mara, New York; Wm. Scott, Buffalo, N. Y.; Wm. Nicholson, Framingham, Mass. The judges in the general classes were Messrs. S. J. Reuter, Westerly, R. I.; M. A. Patten, Tewksbury, Mass.; C. H. Allen, Floral Park, N. Y.

The Awards.

CERTIFICATES OF MERIT.

Certificates of merit were awarded to C. Warburton, of Fall River, Mass., for Crossbrook, pink, 94 points.

To C. W. Ward, for Dorothy Whitney, yellow, 87 points.

To C. W. Ward, for Harry Fenn, 89 points.

To C. W. Ward, for Golden Beauty, 87 points.

To Weber & Sons, for Norway, white, 91 points.

GENERAL PREMIUMS—CLASS A.

100 White—Weber & Sons, Oakland, Md., first with Norway; Craig & Son, Philadelphia, second with White Cloud.

100 Light Pink—L. E. Marquis, Syracuse, N. Y., first with The Marquis; Daifedonze Bros., Flatbush, N. Y., second with Blush, seedling.

100 Dark Pink—Peter Fisher, Ellis, Mass., first, and Chicago Carnation Co., Joliet, Ill., second, both with Lawson.

100 Scarlet—C. W. Ward, Queens, N. Y., first with Crane; C. W. Ward second with Joseph H. Manley.

100 Crimson—C. W. Ward first with Gov. Roosevelt; C. W. Ward second with Harry Fenn.

100 Yellow Variegated—C. W. Ward first with Golden Beauty; C. Besold,

Mimosa, N. Y., second with Admiral Ceylan.

100 White Variegated—C. W. Ward first, and Halliday Bros., Baltimore, second, both with Bradt.

CLASS B.

50 White—M. A. Patten, Tewksbury, Mass., first with White Cloud; Lehr Bros., Baltimore, second.

50 Light Pink—John Cook, Baltimore, first with Joost; Isaac H. Moss, Baltimore, second with Mella.

50 Scarlet—Lehr Bros., first and J. M. Rider second, both with Crane.

50 Crimson—Halliday Bros., first with Gomez.

50 Yellow Variegated—Halliday Bros. with Gold Nugget.

50 White Variegated—L. H. Moss first and J. M. Rider second, both with Bradt.

INTRODUCTIONS OF 1900—CLASS C.

25 Light Pink—L. E. Marquise first and Craig & Son second, both with The Marquis.

25 Dark Pink—Weber & Sons first and Peter Fishck second, both with Lawson. 25 White Variegated—J. N. May first and Craig & Son second, both with Olympia.

SPECIAL PREMIUMS.

Weber & Sons premiums for best 100 Genevieve Lord—Halliday Bros., for best 25 do, I. H. Moss.

The Craig-Hill Hort premium for best 100 Ethel Crocker—Halliday Bros.

Weber & Sons captured the Fisher cup awarded for best vase, 50 blooms, of Mrs. Thomas W. Lawson.

The Lawson gold medal, for best vase of 100 blooms, any variety or color, was awarded to Peter Fisher for Mrs. Thomas W. Lawson.

The Lawson silver medal, for best 25 blooms of a seedling carnation undisseminated, to R. Witterstaetter for Adonis.

The Lawson bronze medal for best 12 blooms of a seedling carnation undisseminated, to Weber & Sons for Norway.

The D. Thomas prize of \$25 for best seedling raised in Baltimore, was awarded to C. Akhurst & Son, White Marsh, Md., for an unnamed purple seedling.

GENERAL EXHIBITS.

Robert Kirt, Philadelphia, Pa., exhibited his Fairy Vase, stands and adjustable vase holding tools for decorative purposes, also rubber capped flower tubes useful for keeping flowers supplied with water for long shipping and for use separately in decorations. He also exhibited a very fine mirror arrangement displaying the use of the above.

Messrs. Cullom & Ibbotson, Potosoyd, Pa., displayed a new carnation support.

Samuel S. Penneck, Philadelphia, made a large display of ribbons, some of them double faced and very useful and ornamental. He also displayed water proof bouquet holders made of ribbon and tassels that were very much admired by both the trade and the public.

E. Hippard, Youngstown, Ohio, displayed a new galvanized greenhouse gutter, a very simple apparatus and a great acquisition to growers having adjoining houses.

merit. Shown by the American Rose Co., Washington, D. C.

Frank E. Cramer, Hanover, Pa., an extra well colored vase of Mme. de Watteville.

John N. May exhibited the new rose Mrs. Oliver Ames, a lovely delicate blush pink rose, a sport from Mrs. Pierpont Morgan; this will prove a grand acquisition and a certificate of merit is worthy of consideration.

Mrs. T. Harrison Garrett, Baltimore, Md., exhibited a nice collection of roses consisting of Brides and Bridesmaids and it is especially commended.

Mr. John Cook, Baltimore, Md., exhibited a nice collection of carnations and seedling roses deserving of special mention.

Myers & Sautman, Chestnut Hill, Pa., exhibited a nice vase of American Beauty.

Eli Cross, Grand Rapids, Mich., exhibited nice bunches of violets, white and blue, and of extra good quality.

Mr. John Cook, Baltimore, Md., exhibited a fine vase of his new rose Baltimore, Antoin Revoir and Lady Mary Fitzwilliam, a lovely bluish white rose of large size, and will make a valuable addition to our list of roses. Certificate of merit recommended.

Mrs. T. Harrison Garrett, Baltimore, Md., made a nice exhibit of palms and decorative plants in center of hall worthy of special mention.

Mr. Chas. Seybold, Patterson Park, Baltimore, Md., exhibited a very large and pretty garden bed design worked out with great skill and deserving of special mention.

RULES FOR JUDGING.

The judges of seedlings had the following instructions, adopted at the Thursday morning session, to guide them:

"All judging in these classes shall be by comparison with existing varieties only.

"Color (25 points). The variety under judgment shall be compared with the best variety of its color extant and be awarded points proportionate to its color value.

"Size (20 points). The variety shall be compared with the largest existing variety, regardless of color, and be awarded points proportionate to its size.

"Stem (20 points). The strength of the stem should be sufficient to carry the flower erect, and the length should be sufficient to display the flower to the best advantage. It is desirable that a stem should be provided with numerous and broad leaflets, as giving better effect when the flowers are arranged in bunches. The variety should be compared with that existing variety which best combines these requirements.

"Form (15 points). Comparison shall be had with such existing variety as shall show the best form. Defective form, due to bursted calyxes, shall be considered under this head.

"Substance (10 points). Comparison shall be made with the existing variety having the greatest substance.

"Calyx (5 points). The standard of comparison shall be that variety extant having a calyx which most securely and regularly supports the petals, and of its general characteristics, shows the least liability to burst.

"Fragrance (5 points). Comparison shall be had with the most fragrant variety extant.

"Explanatory.—In case any new va-

View from the stage.

The Carnation Society's Exhibition at Baltimore.

John Kuhn, of Philadelphia, took the Lippincott silver cup for best vase, 50 blooms. Mrs. Bertram Lippincott.

The American Carnation Society's cup for best arrangement of carnation blooms, was taken by Peter Fisher (see engraving).

The E. H. Michel cup, for the largest and finest display at this show, went to C. W. Ward.

The Cottage Gardens cup, for best variegated seedling carnation, with white ground, not yet distributed, was taken by C. W. Ward.

J. A. Peterson, Cincinnati, O., showed some fine plants of *Adiantum Farleyense*.

Joseph Heacock & Son, Wynote, Pa., exhibited vases of American Beauty that were of exceptional merit.

M. Paterson Johnson, Baltimore, Md., exhibited five vases consisting of Bride, Bridesmaid, Liberty, American Beauties and two vases of Marie Louise violets all of extra good quality and a fine exhibit.

White Golden Gate, two extra fine vases, showing it to be a magnificent flower and worthy of a certificate of

View from the Balcony
The Carnation Society's Exhibition at Baltimore.

riety under consideration shall be equal to or exceed the standard in any of the foregoing comparisons, it shall be given the full number of points allowed to the attribute in question. If the variety under judgment shall show in its attributes a marked departure from existing types and if, in the opinion of the judges, such departure from existing types shall give the variety unusual and exceptional merit value, the certificate on the ground of "novelty," although the variety in question may not, under the regular scale, score points enough to entitle it to such award. It is not contemplated that such action will be taken by the judges save in exceptional cases and, when taken, their report shall specify the number of points scored under the regular scale and shall give a full explanation of the reasons for such extraordinary award."

All awards made by the judges shall be subject to the approval of the Society. All certificate awards shall give the full number of points scored by each variety under each separate heading.

The Meetings.

The Thursday morning session was very brief and the only business transacted was the selection of judges and the adoption of rules for their guidance.

At 4 o'clock in the afternoon Mayor Hayes welcomed the visitors from the stage in the exhibition hall. He voiced a hearty welcome on behalf of the citizens of Baltimore, who, he said, were never happier than when extending hospitality to the stranger. He said that the city highly appreciated the honor

done it in selecting it for the annual meeting of the society. He presumed the visitors had already discovered the fact that among Baltimore's attractions were the prettiest women that ever lived. He extended the freedom of the city to the visitors, and his cordial greeting was received with much applause.

Mr. Wm. Fraser followed and extended a welcome on behalf of the Gardeners' Club of Baltimore. He spoke of the work of the society and praised the magnificent flowers on exhibition. He said the most important part of the society's work was passing upon the merits of candidates for favor in the carnation world and added that without the indorsement of the judges of the society a new variety would find difficulty in getting attention from any grower. He said the "Divine flower" was comparable only to "Divine woman."

Robert Craig responded on behalf of the society and after thanking the mayor and the Gardeners' Club for their cordial welcome said that the reputation of Baltimore as a most hospitable city was well known. He spoke of the value of the meetings and the exhibitions in educating the general public as well as the members. Referring to what the preceding speakers had said regarding Baltimore's beautiful women he said they were the only thing in nature more beautiful than the carnation.

Thursday evening Prof. Albert E. Woods read his very interesting and instructive paper on carnation diseases, which appears in this issue, together with the discussion on same.

Friday morning President Robert Halliday read his address as follows:

President's Address.

The wonderful progress made in late years, the rapid strides to popular favor made by the carnation, at whose shrine we are worshipping today, is not a craze, for as long as flowers exist, this beautiful creation of the old-fashioned pink will have its place in the heart of every flower lover, and deservingly so.

That state of perfection at which it has already arrived should make every grower, every introducer of a new variety feel a pardonable personal pride, for not only has his work been well done, but it is still growing, and there is yet a wide field in which to work.

When we stop to think of the possibilities wrapped up in this symphony of loveliness, it is with a keen delight and all-absorbing interest that we walk into the seedling house in the morning and note the development of the opening flower, whose label is only marked with the hazy outlines of the hybridizer. With all its trials and disappointments, it is still fascinating beyond compare to the true carnationist.

Can you tell me of a flower that responds so kindly to genius treatment? From a grower's standpoint it is a breadwinner when properly handled. Can you mention a flower that will give as much pleasure to your customer, that will keep the same length of time in water when cut, that has the diversity of color, or can fill a room with such a pleasing spicy odor, that insidious perfume known to the carnation alone—can you name a flower its equal at the same price?

It has been our privilege this season to arrange several decorations made up of nothing but carnations, with no other foliage than that of their own graceful feathery green, and I cannot remember a more pleasing effect. From the beautiful rose shade of the Genevieve Lord to the dark crimson maroon of the General Gomez, each with its accompanying green foliage, we have produced some exceedingly attractive table effects. Ethel Crocker in all her majesty has adorned the dinner table of many of old Maryland's most prominent homes, and so in our own small way we can note, and with much pleasure, the growing demand of this most popular flower.

Some years ago we stopped growing roses and started in to push the carnation, thinking it was to our best interests to buy our roses and if possible grow all the carnations sold over our counters. Our friends thought at the time that we were making a very foolish move, but time has proved its wisdom: house after house we planted, until our whole plant is now devoted to carnations alone for cut flowers only, consequently, we are now in a position to guarantee our customers good fresh cut flowers, and flowers that will not grow tired and sleepy in three or four hours.

What a pleasure it is to have the society leader come back to you and say that "her ten dozen Gomez lasted six or seven days, and she even then hated to throw them away," so let me ask you growers, is it not much to your advantage to have the retail customers receive good, strong, fresh flowers that will keep several days? Give your store man a chance, send him your flowers direct, don't let the blooms hang so long for the sake of size that they are al-

white—and I sincerely hope that this exhibition will bring out one of sterling merit. Give us a Flora Hill flower on a White Cloud stem, and the flowering qualities of a William Scott; we need it badly.

I have not had the pleasure of seeing Norway, but I must say one word about our Maryland growers, of whom I am very proud, and justly so, especially of our representatives from Oakland, men who have helped push the divine flower up the ladder of fame with an untiring energy and perseverance worthy of the great state that they represent; we believe that they have introduced seedlings worthy to carry their banner the world over and find a place in every collection.

We here in Maryland owe to our worthy vice-president the fact of our being the banner state in regard to membership; his magnetic influence and honest opinions have won many over to the shrine of the carnation.

Secretary's Report.

Your secretary reports having issued the proceedings of the meeting held in Buffalo, N. Y., in due time, and having mailed the same to all members of the society not in arrears for dues.

Through our stenographer not being acquainted with floral terms the report had to undergo numerous changes, and the thanks of the secretary and the society are due to Mr. Alexander Wallace and Mr. Richard Witterstaetter for assistance in making these changes.

Through an oversight no mention was made in last year's report of the very kind donation made toward our permanent fund by each of the trade papers, as follows: *The American Florist*, \$30;

meeting has been of immeasurable advantage, and will, I hope, be made a standing rule.

All regular matter sent out by the society is mailed to every member, and if not promptly received, a postal card inquiry will bring a second copy.

Both membership and registration have steadily increased, and from your secretary's point of view we start the new century very auspiciously.

Treasurer's Report.

Treasurer Dornier reported receipts during the year of \$882.50, which, added to the old balance of \$1,010.61, made the total available funds \$1,893.11. The expenditures during the year \$78.08, leaving a cash balance of \$115.03 and a certificate of deposit for \$900.00, making the cash assets \$1,015.03 at date.

The New Officers.

Indianapolis was selected as the place for the next annual meeting and officers were elected as follows: Wm. G. Bertermann, Indianapolis, Ind., President; Fred Lemon, Richmond, Ind., Vice-President; Albert M. Herr, Lancaster, Pa., Secretary; F. E. Dornier, Lafayette, Ind., Treasurer.

Exhibition Changes.

The society will in future supply printed labels for standard varieties and exhibits in which the varieties are not labeled will be debarred from competition. Exhibitors showing novelties must attach printed or typewritten labels to insure legibility.

It was decided that in future the gold, silver and bronze medals be awarded as first, second and third prizes in the class for best 100 blooms instead of as at present.

Seedlings in the foreground and the vases of 100 each back of them

The Carnation Society's Exhibition at Baltimore.

most part when you put them in the shipping box; remember that good flowers will sell themselves.

Like my distinguished friend, Mr. William P. Craig, and I quote him when I say that "our judges and our growers do not pay enough attention to the lasting and keeping qualities of the carnation, for it is most essential to your customer and your store man," then throw out your poor keepers, for they will not increase your business, nor will they bloom the carnation.

I hear the cry from all over the country we are badly in need of a good

the *Florists' Exchange*, \$25; the *Florists' Review*, \$15. The *American Florist* has made an additional donation of \$10 for the current year.

Quite a number of individual members of the society have contributed toward this fund, all of which has been properly credited to their account. The thanks of the society are, however, due them for their generosity, and also to those gentlemen who aid the society by their advertisements in the premium list.

The rule adopted at the last meeting compelling all entries to be in the hands of the secretary four days before the

The society will purchase vases of its own to be used at the exhibitions and in this way assure exhibitors of a sufficient supply of vases of suitable sizes.

Other Business.

A letter was received from the American Rose Society inviting a further conference regarding holding the meetings of the two organizations at the same date and expressing the hope that the Carnation Society would make a display at the rose show in New York March 20 and 21.

On a motion by Mr. Ward the executive committee was instructed to have

A view across the hall in front of the stage

The Carnation Society's Exhibition at Baltimore.

the society incorporated so that it might have a legal existence. As an explanation of his motion Mr. Ward said it was his intention to remember the society substantially in his will, and before this could be made effective the incorporation of the society would be necessary. The announcement was received with applause.

The secretary was requested to take up the matter of securing a special rate from the railroads for the next meeting, the feeling being general that the attendance was now sufficiently large to guarantee the required one hundred from a distance.

A question asked was whether it would not be to the mutual interest of introducer and buyer to have each variety shipped direct to the buyer, and whether March 1 was not too late a date to send out a new variety. Mr. Ward thought that unless the constitution of the carnation could be changed it would be impossible to get up a stock to distribute earlier.

A committee, consisting of Wm. Scott, C. W. Ward and E. G. Hill, was appointed to revise the constitution and by laws so as to adjust them to the proposed incorporation of the society, and to insert a clause providing for life membership.

The special fund received a great lift during the Friday afternoon session, over \$1,200.00 being added to it by the contributions of various members in sums ranging from \$5.00 up to \$100.00. This special fund is to be invested and the interest only used to further the purposes of the society.

Mr. John W. Garrett, of Baltimore, offered a prize of \$50.00 to be used as the society saw fit. A vote of thanks was given the gentleman for his generosity.

Sub-Watering.

In the discussion upon this subject Mr. J. L. Dillon gave a description of his system of sub-watering in solid beds. He makes the beds of cement and uses ashes in the bottom in place of bricks or other material. The cost of these solid beds arranged for sub-watering is 50 cents a running foot, and as the benches average

about 4½ feet wide, the cost per square foot is about 7 cents. This is about double the cost of ordinary raised benches, filled with soil ready to plant. He says he gets better results in the sub-watered beds and 25 per cent more flowers, but added that great care was necessary to give enough water without overdoing it. He is so well pleased with results that he will next year fit another house with these sub-irrigated beds.

Mr. Ward said sub-watering was still in the experimental stage with him and he feared the system needed more care and watching than the average florist could give it. He thought the main advantage was the even distribution of heat and that it was most beneficial in the summer time. Some varieties did much better than others on the sub-watered benches. Bradt did well and White Cloud and Daybreak did not. He was not prepared to endorse sub-watering without reservation.

Notes.

An excellent feature inaugurated by Secretary Herr this year was the identification scheme that has been in use for some years by the American Association of Nurserymen. Each member was provided with a numbered button and a printed list of the members and their numbers. It enabled many to become acquainted or to identify those whom they had previously known through correspondence only. It was very useful and we trust the plan will be continued.

A vase of fine blooms of Lorna, Mr. Dornor's fine new white variety, was displayed on Friday. The flowers had been delayed in transit and arrived too late to be considered by the judges.

Beau Ideal is the name of a promising new pink shown by N. D. Pierce, Norwood, R. I.

On Friday afternoon a large party of the delegates visited the greenhouses of Messrs. Halliday Bros. and were liberally entertained.

On the same afternoon a smaller party were the guests of Judge Sands at his home in Lake Roland. After visiting the

greenhouses, the contents of which were in excellent condition, those present were the recipients of the generous hospitality of a Maryland home, and the experience was one to be remembered.

A local paper reported that Mr. Peter Fisher had a slight English accent, russet shoes and a cravat in-tasche, resembling the color of the Lawson carnation. It caused some little amusement and Mr. Fisher seemed to enjoy the joke with the rest.

During the convention there was a bowling contest between Baltimore and "The World," and "The World" won. An easy explanation of this is that Billy Kasting doesn't live in Baltimore.

Baltimore Hospitality.

Baltimore well maintained its reputation for hospitality and certainly the visitors were never better cared for. The hall being some little distance from the hotel section, the local club served a lunch to all each noon at the back of the stage in the exhibition hall. Oysters were a prominent feature at these banquets and they were served from hollowed out blocks of ice. These and the sandwiches, etc., were supplemented by coffee, claret, punch and other liquors. A report of the banquet on Friday evening will be found under another heading. At the concluding session of the meeting a rising vote of thanks was passed to the Gardeners' Club of Baltimore for the many hospitalities extended.

Those Present.

Among those present from a distance were the following:

New York: F. O'Mara, C. W. Ward, E. Daileidense, C. H. Allen, A. Wallace, C. Bosold, Walter Molatsch, J. W. Withers, E. R. Pierson, J. N. May, Theo. Heunstein.

Philadelphia: J. D. Eisele, Robert Kift, Walter Mott, Robert Craig, W. P. Craig, Edwin Lou-slade, C. W. Cox, H. C. Geiger, Frank Myers, Jos. Hencock, H. F. Michell, John Kuhn, G. C. Watson, C. Eisele, S. S. Skidelsky, Paul Berkowitz, William Graham, V. Groshens, H. Dumont, E. A. Jley, J. Hig-

2985, J. Trumbull, A. H. Laneo, G. Dently, J. A. Shellen, J. A. Hendley, D. E. Fishback, R. H. Feltwell, J. L. Pennock.

Chicago: N. Wictor, J. D. Thompson, James Hartshorne, J. S. Wilson, G. L. Grant.

Washington: W. F. Gude, A. Gude, Benjamin Durfee, W. R. Smith, F. H. Kramer, W. S. Clark, A. W. Thorpe, P. H. Mechem, Peter Bissott, David Bissott, Z. D. Blackstone.

Buffalo: William Scott, W. F. Kasting, C. F. Guenther, W. J. Palmer, Jr., Pittsburg: F. Burke, B. L. Elliott, C. Blind.

Cincinnati: R. Witterstatter, E. G. Gillett, W. K. Partridge, William Jackson, J. A. Peterson.

Grand Rapids, Mich.: G. F. Crabb, Henry Smith.

Sharon, Pa.: John Murelic, E. J. Murelic.

Oakland, Md.: H. Weber, William Weber.

Hagerstown, Md.: H. Holzapfel, H. Bester, H. Bester, Jr.

Harrisburg, Pa.: J. D. Brannenman, John Lohan.

Kennett Square, Pa.: William Swayne, J. B. Swayne, J. M. Palmer.

Other points: F. L. Atkins, Rutland, N. J.; J. H. Dunlop, Toronto, Ont.; Charles Black, Hightstown, Pa.; John Cullen, Penoxod, Pa.; T. J. Johnston, Providence, R. I.; C. Warlinton, Fall River, Mass.; T. E. Edwards, Bridgeton, N. J.; C. H. Atkins, Madison, N. J.; M. A. Whitty, Richmond, Va.; H. Eichholz, Waynesboro, Pa.; P. S. Byrnes, Wickford, R. I.; W. Spillsbury, Woburn, Mass.; W. J. Stewart, Boston; A. H. Lange, Worcester, Mass.; E. N. Pierce, Waltham, Mass.; Charles E. Smith, York, Pa.; C. P. Barnard, Northbrook, Pa.; E. A. Nelson, Indianapolis, Ind.; F. E. Dornier, Lafayette, Ind.; J. A. Patten, Tewksbury, Mass.; S. J. Meuter, Westery, R. I.; William Nicholson, Framingham, Mass.; Peter Fisher, Ellis, Mass.; L. E. Marquisee, Syracuse, N. Y.; Benjamin Connell, West Grove, Pa.; A. N. Pierson, Cromwell, Conn.; J. L. Dillon, Bloomsburg, Pa.; Albert M. Herr, Lancaster, Pa.; George Bayer, Toledo, Ohio; J. A. Evans, Richmond, Ind.; E. P. Hestetter, Manchester, Pa.; John G. Esler, Saddle River, N. J.; W. W. Sharpless, Tazewell, Va.; George S. Geiger, Nazareth, Pa.; N. D. Pierre, Norwood, R. I.; L. Dupuy, Whitestone, N. Y.; S. A. Baker, Erie, Pa.; C. A. Boyce, Palmer, Mass.; E. Hippard, Youngstown, Ohio; F. A. Millman, Cumberland, Md.; H. P. Gould, College Park, Md.; R. Vincent, Jr., R. A. Vincent, and C. E. Akhurst, White Marsh, Md.

The Banquet.

The banquet was a grand affair in every way but here we met our Waterloo, for a draught from the stage swept around the spot where wood ought to grow and we lost our voice, but we could enjoy the eloquence and stories of others. Mr. Seidewitz is an ideal chairman and master of ceremonies and the telegrams received from Aguinaldo, Mrs. Nation, Bloomsburg, etc., were most amusing and clever. The mayor of Baltimore responded most eloquently for his city and gave us little of local politics. Mr. Robert Craig was, as he always is, at home on the toast "The Carnation." Few men in or out of the trade can talk so feelingly and yet truthfully as Robert. Baltimore's Park Commissioner is an orator

Seedlings in foreground and General Classes in background.

The Carnation Society's Exhibition at Baltimore.

with a silver ring in his voice that is a delight to hear and his response to "The Public" was a treat.

Mr. Christie, of Baltimore, was natural and witty on "The Ladies" but we are sorry to hear that he has occasion to think any of them so bad that "they ought to be dead." "The Rivals" was ably taken care of by John N. May and after allowing to the Divine Flower its many fine qualities he still claimed for the rose its pre-eminence in the floral world. "Telling Others How" was too much of a toast for William Scott, especially in his exhausted condition and he quickly wandered to the Pan-American, which he has on the brain at present, and where he hoped he would meet all the brethren. When the sage of Syracuse arose we all settled down for a good time and we got it.

Mr. Marquisee was loaded with stories and we got half a dozen of his best. (They were not all strictly parlor stories.) Mr. M. has a big head and lots in it and a most delightful way of imparting his wisdom as well as his jokes. The mayor of Annapolis after wise deliberation told him he ought to keep ducks.

In the absence of the venerable W. R. Smith, Mr. C. W. Ward responded to the toast of "The Gardener" and did it nobly. We have never heard Mr. Ward in finer order. He loyally upheld the profession of the gardener and looked in the not far distant future when the skilled gardener would rank socially and in every way with any in the land. His proof that you could find in the gardening fraternity the counterparts of all the great lights of the past and present age was happy and highly amusing.

The trade papers were to be handled by Judge Sands but that most genial and hospitable man had to leave as the hour was getting late. The speeches were concluded most ably by Mr. Graham, of Baltimore, who responded to "Our Guests." He was original and comical and when he told the story of the lady who said to her guests when they remarked of the trouble she must have gone to that "the trouble ain't nothing to the

expense," we realized how hard we had worked the Baltimore boys.

There were at least a dozen talented young men who between speeches gave us a delightful yandeville show from the stage. All the numbers were good and the chorus was fine. I would like to be the owner of that beautiful tenor or that baritone, or if that was denied me, that power to whistle so charmingly. It was a great evening and a great convention and the president of the society presided at the business meetings in a most dignified and able manner, but oh, Robert, you worked hard, I know you did. I know I voiced the feeling of all when I say that there is no more generous, self-sacrificing man in the trade, and none more loved and respected than Robert Halliday.

W. S.

Judge Sands was present in spirit if not in the flesh and this is what he said in part:

"In the gardener's art, if you justly boast of your Brecks and Hunts and Hendersons, of your Witterstatters, Dailledonzes and Fishers, we take equal pride in the roster which bears the names of our Feasts and Cooks and Halladays and Pentlands, and of that great and learned man, big of frame and big of brain, to whose memory every cap should be doffed, gardener, nurseryman, botanist, writer—William D. Bracknridge.

"The first American catalogue of roses was issued from Baltimore, its vivid descriptions of varieties just as entrancing to the ear and as alluring to the buyer as the most eloquent word paintings of the catalogue men of today. Here is a copy of the modest volume, and Mr. James Pentland was its compiler.

"But to the trade press. Some years ago a close friend of mine, counting on my experience as a publisher and on the newspaper blood in my veins, asked my advice as to an investment in a proposed paper designed for the florists' trade, and received the reply: 'Halliday'—for it was that splendid fellow and accomplished gardener, the father of your president—

'you are so situated you must go in, but put as little money in as the circumstances and surroundings will allow, for of course it will fail.' I am glad to stand here tonight to admit that I was a false prophet, that it did not fail, that it was a success from the very start, and that it survives, in usefulness sharing the field with others just as prosperous and profitable, all working to the same good end—the advancement of the florists' trade, the protection of our mutual interests, the education of our members, the engendering of an effective *esprit de corps*, the promotion of a refined taste, and the elevation of the profession of the gardener amongst other callings which make life more beautiful and more worth living, as ministering to esthetic tastes, bringing wholesome pleasures to the many as well as to the few, whose pure delights are not elusive, but grow by that on which they feed, and are open and free to all, prince and peasant, ignorant and learned, rich and poor.

"These are the purposes, these the aims of the trade press. That it has achieved them all—abundantly achieved them all—I call upon every man here present tonight to testify.

"Who can say what part of the trade's expansion of the past fifteen years is not attributable to the intelligence, enterprise and zeal of this great instrument of progress, seconding every forward movement, taking the initiative in many, affording field and opportunity for the clear heads and keen pens of the Dormers, the Craigs, the Scotts, the Mays and the Webers, of every section of the trade, and of every section of the country—to the profit of us all!"

HYBRIDIZING OF THE CARNATION.

By PETER FISHER, ELLIN, MASS.

[Read before the Baltimore Convention of the American Carnation Society.]

Mr. President, Members of the American Carnation Society and Friends: It is not my purpose in this paper to go into details as to the origin and evolution of the carnation from its primitive stages to the magnificent varieties of the present day, that having very recently been done by others well qualified through years of earnest and faithful application.

Some of those early workers, to whom we owe so much, are still with us; others who bid fair to become mighty factors in the improvement of the carnation, and who had almost reached the goal in view, have been called away in their prime, and so their work has been laid aside to be taken up by others and carried forward toward the consummation of the ever-receding "Ideal" in the Divine Flower.

The beginner in hybridizing or crossing the carnation of today with a view to its improvement, does so on a very different plane from that of the worker of ten or even five years ago; and right here I think it would be well to remember the debt of gratitude we owe to those men who have gone before, breaking up for us the "fallow" ground (so to speak) and passing it along to us, so pregnant with fruitful possibilities.

And I am glad to say that some of our most expert and earnest workers in this cause, and who have been successful in giving to the trade some of the best standard varieties, are not the "Hermits" in our business, isolating themselves and shrouding their methods in mystery, but who are ever willing to explain to any one interested enough to inquire, and

even submit their records showing the results of years of patient effort, with a view to helping others. Such men have improved the of the Divine Flower at heart, without a doubt.

To get the best results in hybridizing or cross-fertilizing the carnation means much more to my mind than the mere transmission of pollen from one variety or species to another. It must begin with the careful selection of desirable varieties to be used later for this purpose. Select the cuttings with the greatest care from flowering stems of healthy plants only. You cannot be too particular on this point because a cutting of this sort always in-ures earlier and more continuous blooming qualities in the parent plant from which the pollen is taken or seed is to be raised, as the case may be. A high state of cultivation is, to my mind, indispensable all through, from the taking of the cutting to the gathering of the seed, and ever after, if you would get out of your seedlings the best traits they contain.

Understanding the needs of your varieties and a high state of cultivation, is more than half of the battle, for just in proportion to the health and vigor of the parents, will the seedlings develop in health, size and substance. If the stock is well established, strong and healthy, so will the offsprings be; if weak, diseased and sickly, they will develop seedlings equally faulty.

Early planting is another very important point to be considered. Plants housed late in July or early in August, from which all flower shoots have been pinched back, so that they make their

good month in which to work, as insects are less liable to be troublesome at this time, fertilizing where you would prefer to do it yourself. From crosses made during this month, seed can be ripened and sown during the latter part of January. Crosses made earlier or late in spring will ripen seed in a shorter period, but in the latter case often too late to be of service the same season. If sown in January the seedlings have three months growth before planting them out doors, and most of them will bloom in the field and thus give a chance for selecting only meritorious varieties for further tests in-doors, and so much valuable space is saved.

I have sown seed as late as April 2d, and had some of the plants bloom in the field by Aug. 15th, four and one-half months from sowing seed. But late sowing is not to be recommended, as many of the plants have not bloomed before frosts are due, and to house all those that have not means a waste of much valuable space. In fact, with very few exceptions, where plants get overcrowded or from some other cause, I have seldom found a variety that bloomed late the first season prove of commercial value.

Early and continuous bloomers are what we need. Only a few years ago it was thought by many to be an impossibility to get blooms of a high grade and in paying quantities from the same plant. Eight years ago I had varieties producing blooms 3 to 4 inches and over, on stems like canes, that only gave an average of eight blooms to the plant during the entire season. Those varieties

Mr. Fisher's Carnation Basket and Mr. Moss' Golden Gate and Liberty roses.

The Carnation Society's Exhibition at Baltimore.

flowering stems in-doors, will be well established and in condition to use for crossing purposes in October, or early in November; and later when only the most vigorous and healthy plants and perfect flowers should again be selected, either for seed or pollen parents.

There are several advantages in early application, such as abundance of sunshine and consequently ample ventilation, which insures a dry condition of the pollen, which is also plentiful during the early fall months. November is a

were of a strong fleshy growth with broad foliage. Plants of wiry habit with small foliage are invariably few bloomers. The flower runs smaller and often lacks in substance.

By a combination of those habits we have today varieties that produce freely high grade blooms 3 to 4 inches in diameter, on long stems, from plants of excellent habit and medium sized leaf and wiry growth, which is preferable to rank soft growing sorts, as they can be planted much closer together, thus getting

a much larger cut from same space. The smaller foliage also admits the sunlight to the base of the plant, and during the dull winter months is not usually subject to attacks from insect pests, or damaged through syringing, like soft fleshy sorts.

The best time to apply the pollen is on a bright sunny morning or forenoon, and the time should be regulated by the condition of the atmosphere in the house; but the pollen should be dry, and applied while the ventilators are opened, as the moisture settles on the plants within a few minutes after closing up the house, and so is not conducive to best results in fertilizing the flowers. If impregnation has taken place the bloom operated upon will usually show it by wilting or "going to sleep" within twenty-four hours. The method of applying the pollen has been so often explained, and is so simple, that I need not here describe it. It should be done systematically, always having an aim in view. When the flowers are in proper condition, depends upon the varieties, some being

seedlings will be freely raised in this manner, unfolding a wealth of colors, and of a general quality, requiring the discarding of a very small percentage. (A house of such a strain would be a boon to the average florist with a good retail home trade.) I also believe the quality of those flowers will be as marked in the carnation, as in the pansy or gloxinia of today raised from seed, where they also twenty-five years ago were propagated from cuttings and leaves, to perpetuate the best varieties.

This high strain in carnation seedlings can only be attained by the most careful attention of the hybridizer. He must have a standard to work up to, and he must raise that standard high, having in mind the very best he knows of in existence, and his aim must be to surpass it, no matter if he may already be the possessor of the best yet raised.

Keep records of each cross you make, note carefully the results, especially of those you find to be decided acquisitions. It may take years before you attain the

years one could act more intelligently and much of the mystery as to the diversity of colors in their offspring would be explained. And yet this lack of knowledge often has a saving element in it, as it often infuses new vigor where too close breeding might have a tendency to running out and weakening of the stock.

We are all working along separate lines towards the same goal and who can tell what a combination of the best results of each individual effort may yet accomplish for the improvement of the carnation of the future. Long ago the word was passed that the "limit" had been reached, and yet each successive year sees a new record established, and so it will be for years to come. Whether we have retrograded or progressed can only be ascertained by looking backward, in any calling of life, and so with the culture and improvement of the Divine Flower.

As we bring this test to bear upon the carnation of today as compared with those of ten or even five years ago, no one will dispute the fact that they loom up as a "New Creation." Yet, great as has been the advance in the last decade it will, in my opinion, be far eclipsed in the next five years. I believe that the improvement of the carnation is only in its infancy. We are like children playing on the beach, here and there picking up a pebble, and yet, beyond is the vast ocean of nature's boundless store, from which we are trying to coax some of her hidden treasures, and our success will be just in proportion to the intelligent and untiring effort put forth, taking advantage of the natural means put within our reach.

The last stage, but by no means the least important part of the hybridizer's work, is the final selection of the varieties to be disseminated to the trade. Always remember that you are apt to be a prejudiced party, and naturally so, in favor of your own productions. They ought to be tested three or more years before distributing. During this period you (if expert in your business) cannot fail to see and note the faults of each variety. Compare them conscientiously with the very best you know of in their class. That must be your standard to go by; you must have something tangible; anything imaginary is but the ever receding "ideal"; its size, substance and wealth of colors can only be guessed at. If you are fortunate enough to have our best growers visit your establishment, note carefully their opinion; it is often worth much if expressed, but as a rule the amount of interest taken in the inspection of a variety is a pretty sure indication of its excellence.

There is always a demand for some new shade of color, and in trying to introduce it do not forget that we are catering to the public taste. Note carefully the opinion of lady visitors of culture as they pass through your green-houses; they are usually excellent judges. If your pet variety is passed unnoticed, do not take up time nursing it any longer. If it is something that at once attracts their attention it is pretty safe to say it will prove a success. Last of all, take it to the annual meeting of the American Carnation Society and let it be compared with the best products of other growers. It is pretty sure to get scored just about where it belongs, except on general habit and productiveness of the plant, which the originator alone can know. But if he would retain the respect of his fellow florists let him heed

Carpet bed representing the Coat of Arms of Maryland, executed by Chas. L. Seybold.
The Carnation Society's Exhibition at Baltimore.

ready almost as soon as the bloom expands, others take as long as two weeks to develop their organs. This knowledge must be attained through close observation.

In hybridizing always strive towards retaining an ideal habit of plant, healthy and vigorous, of stiff, wiry growth, producing freely fragrant flowers (if possible) of largest size and substance, on strong stems, and in shades of color that will appeal to the public taste, but it must be a ready seller. Self-colors are usually most useful from a commercial standpoint, and yet there is ever a demand for something new, both in style and color.

Indiscriminate crossing is not to be recommended, as it lacks in interest and is not instructive. I do not mean to say one cannot go at it haphazard, using the superior varieties of today and get grand results. That can be done without a doubt, and I also believe the time is fast approaching when through the rapid improvement of the carnation,

object for which you have been striving, there will be many disappointments, but it is this everlasting keeping at it that brings success. I believe it is possible by carefully and persistently working, taking separate shades of color, crossing white with white, pink with pink, crimson with crimson, etc., year after year, using the product until mixed colors will gradually disappear, and a very large percentage will come true to color. It will take years to accomplish it, but once you get this clear blood infused into your strains you can foretell pretty closely what to expect from each batch of seedlings. This is one of the great advantages of keeping records, and a systematic method of working. With indiscriminate crossing you commence in the dark and continue there.

One's lack of knowledge as to the parentage of many of the new introductions from year to year is often a great disadvantage to one who keeps a strict record. With a knowledge of their parentage back two or three or more

to the line, and if it has any bad defects in its general character state it frankly and do not send it out, or do so stating it plainly.

Do not get the idea into your head that you must launch a collection of new sorts on the market every year. Do not even think that the trade expects one new variety every season. Better go

Fig. 1. Upper leaves punctured by Aphididae.

Fig. 2. Lower leaves punctured by Thrips.

The Carnation in Health and Disease.

slow, if you have the good of this society at heart. It were better to count the introductions of ten years of your best efforts on the fingers of one hand—yes, or even on the index finger—than send out a host of worthless varieties to cause endless confusion, disappointment and loss to your fellows.

In the discussion of Mr. Fisher's paper, Mr. L. E. Marquise said he had found February and March the best time to cross-fertilize the flowers. He thought the plants then had more stamina and were in better condition.

Mr. Fisher responded that by crossing in October the seed ripened early enough to sow and produce plants large enough to plant out in the spring and you could then see three-fourths of the flowers before frost came, and need not house those that gave no promise of being of value. In mid-winter he found it difficult to get pollen of various sorts to work with, and plants from seed sown in the spring were often too late to work to advantage that

season. It must be kept over till the following fall, and in this case the seed loses in vitality. The seed germinates more quickly if sown immediately when ripe. The plants also take a better hold when planted early while there is abundant sunshine and before artificial heat is needed in the houses.

Mr. Ward said his experience had been the same, but that he didn't get as much seed in the fall as in the spring, the pods were not so large and the seed didn't develop so well as in the spring. One advantage of crossing in October was that the plants were then naturally vigorous, providing the season had been a favorable one.

Mr. Witterstaetter said he had been breeding from the same colors to get colors true, always making sure that the varieties worked with had desirable constitution and habit. Adonis was the result of four or five generations of scarlet sorts and Estelle was descended from six generations of scarlets. In crossing these two varieties he had obtained no departure from the color type except in a very few cases.

Mr. Fisher indorsed this plan and thought that if followed by hybridizers generally it would result in the eradication of useless or undesirable colors.

Mr. Ward said he also was growing his seedlings in blocks of color and working along the lines indicated by Mr. Witterstaetter.

The thanks of the society were tendered to Mr. Fisher for his valuable paper by a rising vote.

THE CARNATION IN HEALTH AND DISEASE.

(Paper presented at the Baltimore meeting of the American Carnation Society, Feb. 21, 1901, by Albert F. Woods, Chief of the Division of Vegetable Physiology and Pathology, U. S. Department of Agriculture.)

When your secretary requested me to prepare a paper on carnations for this meeting I was tempted to ask to be excused. The fact is I know comparatively little about carnations and that little is bound up with the question of diseases, especially the one formerly known as "bacteriosis" but now as stigmomose or "puncture disease." The various diseases of the carnation so far as they are known have been very ably discussed on a number of different occasions at your meetings. You have as a society been very fortunate in having the uniring efforts of such eminent botanists as Dr. Arthur, Prof. Halsted and Prof. Atkinson, as well as so many expert growers and skilled observers among your members. The reports of your meetings are always of great interest and value. I can add little that is new on the important diseases of carnations to what has already been presented at your meetings and printed in your reports.

I shall therefore confine myself in this paper in large part to the disease which you will probably recognize better by its old name "Bacteriosis" than by its new name "Stigmomose." I have had a good deal to say about this disease in the past and I regret that my motive in saying it has by some been misunderstood. It was not my desire to discredit the work of any investigator. If anything I have said or written leaves this impression I hope to correct it here, and to present more fully than I have done before some facts regarding the varying resistance of carnations to this and other diseases.

The distinctive character of Stigmomose is the development in the leaf of translucent spots varying in size from being just barely visible when examined by transmitted light to spots 1/16 of an inch or more in diameter. The diseased plants finally become of a yellowish-sickly color, and more or less stunted in growth, and the lower leaves die. When a plant becomes very badly diseased it seldom or never recovers though it rarely dies outright. Two types of the disease are recognized; the one with circular spots is produced by aphid punctures and the other with elongated spots by thrips. This difference is well brought out in the illustrations, Figs. 1 and 2.

This trouble was first described before this society by Dr. Arthur. The honor of its scientific discovery and description as a disease therefore belongs to him. The exact nature and cause of the malady has, however, been more or less in dispute. At the time when Dr. Arthur and Prof. Bolley investigated the disease it was not known that the punctures of aphids, thrips, and red spiders produced any far reaching pathological changes in the plant except to retard growth. The clear or yellowish translucent dots which characterize the disease were suggestive of slow growing bacteria or fungi. It was a very natural thing therefore to search for such organisms in the diseased tissues. A microscopic examination revealed the presence of small bodies in the diseased cells, markedly resembling bacteria and which any one might easily mistake for such.

Bacteria as a rule grow readily on various substances as cooked potato and gelatine, and in dilute broths of various kinds. It is possible in this way to obtain pure cultures or colonies of any specific form. After much work Dr. Arthur

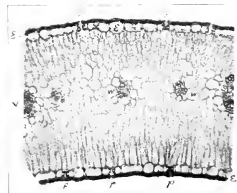

Fig. 3. Photograph of a cross section of a healthy carnation leaf. The vascular bundles are darker and heavier-walled than the rest of the tissue. Five of these bundles are shown in the section (V) and these are surrounded by a layer of thin-walled round or globular cells (W) for storing water. The elongated cells lined with small black dots (chlorophyll) bodies make up the balance of the tissue except the epidermal cells (E), with thick outer wall. The breathing pores (P), or stomata, are shown in section.

The Carnation in Health and Disease.

and Prof. Bolley obtained pure cultures of a yellow bacterium associated with the disease which grew well upon artificial media under conditions similar to those in the leaf. They now took several plants which they believed to be perfectly healthy and put some of these germs on the young leaves and after several weeks the parts of the leaves where the germs were applied became diseased. One might naturally conclude, therefore, as Dr. Arthur and Prof. Bolley did, that the bacteria were the cause of the disease.

Bacteria require a good deal of moisture to develop well. It was therefore a very proper recommendation to keep the foliage as dry as possible and give the plants plenty of light and air. This practice was said to be followed as a rule by very beneficial results to the health and vigor of the plants, especially when aphides were kept down as they were also supposed to introduce the germs of the disease into the tissues by their punctures. It had been noticed that where these insects were numerous the disease was bad.

Fig. 4. The sucking tube (B) of an aphid. A, passing down between the cells of the leaf to the vascular bundle from which sugar and food are withdrawn.

The Carnation in Health and Disease.

Now it happened that a large house of carnations at the U. S. Propagating Gardens came down with a malady which answered the description of bacteriosis in every particular. The plants had been fumigated with tobacco in the usual way to keep down aphides and the foliage had been kept comparatively dry to guard against disease in general. Attempts were made to check the trouble by spraying the young foliage of some of the plants several times a week with germicidal solutions such as corrosive sublimate and formalin, but none of these appeared to do any good. It was therefore decided to force the plants as rapidly as possible, and get what flowers we could from them; the temperature was raised a little above the normal and the plants were frequently syringed. To our surprise, in the moister air with frequent syringings the plants greatly improved and showed less of the disease. The experience led us to examine very carefully the bacterial theory of the trouble.

A great many sections were cut through diseased spots of all sizes and ages and many tests for bacteria were made. The peculiar bodies which were formerly thought to be bacteria were finally shown to be the products of the disorganizing cells. But why should the cells disorganize in such a peculiar progressive manner? Although bacteria could not be demonstrated with the microscope they might still be present under some peculiar condition. It was necessary to examine the diseased and healthy tissues by the so-called culture method, that is, as I have previously explained, to put some of the tissue in question, without contaminating it in any way from outside, into dilute meat or vegetable broths or on sterilized potato or gelatin. If bacteria are present they soon become apparent by their very rapid development under these conditions.

Diseased plants were obtained for this purpose from most of the large carnation centers of the country through growers familiar with the disease. The yellow germ supposed to be the cause of the disease was found in several cases but never in the inner tissues of the plant. In fact in nearly all cases no bacteria or fungi of any kind were found in the diseased spots of the leaves. Occasionally in the last stages of the disease when the surface of the spot had begun to break down bacteria and fungi of various kinds were found in the tissues. It was evident therefore that these could not be the cause of the disease.

However, to make sure, a large amount of healthy young growth of many plants free from insect or other injury of any kind was inoculated with the germ said to cause the disease but no cases of infection were obtained. Other bacteria found on the surface of the leaves were tested in the same way, but no bacteria were found that produced any kind of disease either when thoroughly washed over the young leaves or injected hypodermically into the tissues. This settled the matter of the cause of the disease as far as bacteria were concerned.

The next problem was to investigate the relation of insects to the trouble and of course the first to be examined was the aphid or greenfly. These little pests are present everywhere indoors and outdoors and I do not need to tell you how rapidly they breed and how difficult it is to exterminate them, though they may be kept pretty well under control by constant attention. By colonizing these insects on healthy plants it was soon found that diseased spots were developed wherever the insects punctured the young leaves, but not in fully matured leaves. The greatest care was taken to exclude all bacteria; the surface of the leaves was carefully sterilized with corrosive sublimate and they were kept absolutely free from bacteria. Still under these conditions the disease was invariably produced whenever the aphides punctured the young leaves. The spot did not become apparent in the leaf until several

Fig. 5. The gelatinous sheath left when the aphid withdraws its bill, dark lines extending down into the leaf from S. In each case the puncture occurs just to one side of a breathing pore. The insect was evidently hunting for a vascular bundle.

The Carnation in Health and Disease.

days after the puncture was made, some plants reacting much more quickly than others. Young growths reacted more quickly than older growths, and in mature leaves, as I have stated, there was no apparent reaction at all. Aphides might go on puncturing a plant for a week

or so and then be killed by fumigation or otherwise and for a time the plants would appear to be healthy, though later, perhaps after a week or ten days, they would begin to show disease. It is probable that the apparent infections with bacteria that Dr. Arthur and Prof. Bailey obtained were on plants which had been previously punctured in this way

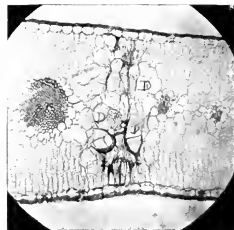

Fig. 6. The enlarged cells in the punctured area. The chlorophyll bodies have disappeared and the light is thus permitted to pass through the leaf readily making a transparent yellowish spot in the tissues.

The Carnation in Health and Disease.

but which at the time the inoculations were made appeared to be perfectly healthy.

The question now arose why should the punctures of the insect produce spots which kept on increasing in size, finally severely injuring the plant? In order to get some light on this question aphides were suddenly killed while they were feeding on the leaf and sections very carefully cut showing how they obtain their nourishment and from what part of the leaf structure it comes. The next illustration (Fig. 4) shows one of these sections. The sucking apparatus of the insect is thrust between the cells of the very center of the leaf, there drawing from the stores of food which the carnation plant had made for its own use.

The insects suck this food material from the tissues and excrete the sugar as honey dew, forming bright sticky spots on the leaves. The result of course is first of all partial starvation for the whole plant, which becomes more or less apparent by the stunting and sometimes the distortion of the plant, according to the quantity of food removed (Fig. 8). The trouble does not stop here, however.

When the insect sticks its bill into the tissues it injects a gelatinous substance, which is left between the cells after the bill is withdrawn. The presence of this material is easily detected by the aid of a good microscope. The next illustration (Fig. 5) shows some of it stained between the cells in a very young diseased spot, s. s., extending as dark lines down into the leaf. Gradually the cells surrounding this material become paler and paler in color and swell up to several times their normal size, Fig. 6. The protoplasm breaks down into minute granules resembling bacteria, and these on the death of the cell run together into globular masses, resembling some kind of fungus, though they are really nothing but dead protoplasm.

Fig. 6 shows the enlargement of the cells in the punctured area and the progressive development of the malady. The

final stage of the disease when the cells have broken down is shown by Fig. 7. Compare with Fig. 3, which shows a section of a healthy leaf. It may be that something injected with the gelatinous material slowly diffuses through the cells in the region of the puncture, causing them to slowly die.

One of the first things that may be observed by a chemical study of the diseased cells is a decrease of the nitrogenous reserve food materials in the diseased cells. This is accompanied by a greatly increased oxidation due to a certain enzyme or chemical ferment. The increase in size of the diseased cells is probably an accompaniment of this process. In the ordinary healthy condition of the plant starch is made in the green cells during the day. It is later converted into sugar by a chemical ferment known as diastase, and is then used for food by the plant as a whole, being transported to all parts. This change from starch to sugar is greatly retarded when the chemical ferment that causes oxidation increases beyond the normal amount. The food materials of the diseased plants become very sluggish in their movement and are probably very easy for the insects to get. The plant itself suffers from a sort of indigestion, and soon loses in vigor, becoming much more susceptible to all unfavorable conditions as well as to insect and fungus parasites. Careful examination has shown that when these abnormal changes have been once started in a plant the ill effects continue long after the initial cause has disappeared.

If the insects are killed or kept off of such a plant the new growth will be free from spots and therefore apparently

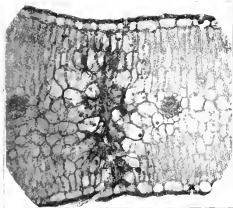

Fig. 7. The last stage of the disease. The cells are dead and have collapsed.

The Carnation in Health and Disease.

healthy. It is, however, poor in reserve albumin and has an excessive amount of oxidizing enzymes, as explained above, and is therefore in fact diseased. This mal-nutrition becomes gradually cumulative from generation to generation of cuttings and so far as our investigations have gone cannot be cured. Stimulating manures intensify the trouble instead of correcting it.

It was noted in these experiments, and, indeed, it is a well known fact, that certain individual plants of any given variety are much more susceptible than others to injury from these causes. In fact, some plants hardly react at all to aphid punctures, while others become badly diseased. The aphides do not thrive on the resistant plants, but increase rapidly on the plants that are not resistant. This was found to be

Fig. 8. Distortion produced by excessive removal of reserve food by aphides during growth.

The Carnation in Health and Disease.

due to the fact that the resistant plants were rich in reserve nitrogen and did not have an excessive amount of the oxidizing ferment, and were also rich in tannin, a substance which aphides greatly dislike. On the other hand, the plants which the aphides thrived on were poor in reserve nitrogen, poor in tannin, and rich in the oxidizing ferment, while at the same time they were of slower growth, lighter colored, and the tissues less slimy when crushed or broken than the resistant plants. To get resistant strains therefore it would be necessary to propagate only from these resistant plants.

There is evidence also which indicates strongly that this diseased condition of nutrition may be induced by unfavorable conditions of growth. For example, severe cutting back of the plants during active growth makes the new growth that develops very sensitive to insect punctures. Severe injury to the roots in transplanting during active growth also makes the plants very sensitive to disease. The tissues in these cases show the same chemical reactions that I have before pointed out for diseased plants. Rapid growth induced by high moisture content of soil and air produces tissues showing this same sensitiveness to injury by insects and richer in oxidizing ferment than plants grown under more favorable conditions. It is evident, therefore, that unless careful selection is practiced varieties which re-pond readily to these unfavorable conditions would gradually become so subject to disease as to make them unprofitable.

It is a peculiar fact that plants which are most subject to insect injury are also most subject to injury by parasitic fungi and probably for the same reason. Too much attention, therefore, cannot be given to keeping stock up to a high standard of natural vigor by careful selection of cuttings from vigorous plants and by careful attention to the general needs of the plant. If this were done the prevalence of disease of all kinds would be reduced to a minimum. This,

of course, is not a new proposition to florists or to others who make a business of growing and studying plants. You know perhaps better than anybody else that unless rigid selection is practiced stock will run out. In these investigations some of the causes of deterioration and the nature of the changes have been determined.

In concluding this paper I will mention briefly three diseases which have been unusually prevalent this year. The first of these is stem rot, which is being investigated by Messrs. Stewart and Duggar. As a special time has been set apart at this meeting for discussing this disease I will not enter into it here.

Probably the next most serious carnation disease this year has been the leaf spot caused by the fungus *Septoria dianthi* Desm. A diseased plant from one of our own greenhouses is shown in the illustration, Fig. 9. The spots are usually more or less irregular in outline and bordered by a dark purple margin. The spores form on the lighter central area of the spot within little black bodies barely visible to the naked eye.

The fairy ring spot caused by the fungus *Heterosporium echinulatum* Berk. has been the cause of serious injury in some cases this season. The spots produced by this fungus are usually more regular in outline, Fig. 10, the central area of the spot being covered by a gray mold-like growth made up of the spores of the fungus, leaving a narrow border of light brown dead tissue from which the name fairy ring may have arisen.

This disease attacks not only the leaves and stems, but also the flower buds. Both of these diseases develop most rapidly and do most serious damage to plants that have been injured in transplanting from the fields to the houses. In many sections the dry, hot weather that prevailed last fall during the time the plants were being moved in was very unfavorable. The root systems were injured in lifting the plants from a dry soil and they adapted them-

FIG. 9. Carnation leaf spot, produced by *Septoria dianthi*.

The Carnation in Health and Disease.

selves to the house conditions much less readily. The main loss, especially in case of the two spot-diseases named, was during the period that the plants were establishing themselves in the house.

To avoid epidemics of these diseases it is necessary to move the plants with as little check as possible, give them abundance of air and not too much water, remove badly diseased plants, dead and diseased leaves, etc. After they are thoroughly established in the houses not much damage will be done by these diseases. The danger of a check in transplanting could be avoided by "indoor culture." The advocates of this method claim that there is less loss from stem rot and other diseases where it is practiced.

Prof. Woods stated that the views shown upon the screen were not from drawings but from direct photographs of sections of the leaves, etc., taken through the microscope.

In the discussion that followed the reading of the paper, Mr. Craig asked whether spots on the leaves could not be caused by other agencies than aphides and thrips. Prof. Woods replied that they might be caused by red spider or other puncturing and all sucking insects. Mr. Craig said he had seen spotted leaves on plants that he was sure had never been subject to injury by insects and asked as to the cause. Prof. Woods replied that the plants had undoubtedly at some time been injured by insects and that the results were often not apparent until some little time afterward. He added that tobacco kills only about 60 per cent of the greenfly and that hydrocyanic acid gas is the only insecticide that will entirely rid a house of them. He had never seen the disease in question produced in any way than by the insects

and it was exceedingly difficult to keep the plants absolutely clear of them. If the plants were kept perfectly free from insects they would then never have this spot disease. One peculiarity of the disease is a weakness of the plant due to the withdrawal of the nitrogenous material by the insect. The disease could also be produced by any serious injury to the roots of the plant, or by cutting it back too severely. There are certain varieties that are particularly sensitive to every disease that comes along and this peculiarity is transmitted through the cuttings. About four-fifths of the cuttings from weak plants will be subject to disease. It is a pathological condition transmitted through the cutting but not through the seed. The reserve nitrogen in the plant is reduced one-half by the disease.

Mr. Scott asked why it was that the once much dreaded rust had practically disappeared without any special use of fungicides. Prof. Woods replied that the improvement in the general conditions under which the plants had been grown and the less use of water on the foliage had brought about this result. Having the foliage and atmosphere of the greenhouses dry was one of the best means of preventing the development of the rust because the spores of this fungus must have moisture before they can germinate. Without moisture they cannot get a foothold or penetrate the leaf.

Mr. Craig asked as to the origin of stem rot and Prof. Woods replied that there were two forms due to two different fungi. One is a sterile fungus that does not produce any spores. It has no means of dissemination through the air but works entirely through the soil. It is a root-like fungus and grows near the surface of the soil, gradually working its way into the plant at

the surface of the soil. This form seems to have been more prevalent among plants that have been lifted from dry soil when moved into the house, but it would no doubt also attack healthy plants. It is a dry rot.

The other form is more parasitic and is a wet rot. If you take hold of the base of the plant and twist it between your fingers the skin will come off. With the dry rot this does not occur but if you break the stem you find a sort of pith inside.

As to remedies for stem rot, if the plants are once attacked nothing effective can be done. Stewart and Dugger have recommended lime. This fungus grows best in soil having high acidity and the lime reduces the acidity. Heavily liming the bench (as much as you dare) will have a tendency to check the disease, but it is not a cure. The only way to clear the soil of all germs is to sterilize it by applying steam for two hours at a pressure of 140 pounds.

Both fungi grow in the fields under favorable conditions, and he knew of no way to prevent stem rot in the field. Carnations should never be grown again

FIG. 10. Fairy-ring spot, or ring mold of carnation, produced by *Heterosporium octulmatum*.

The Carnation in Health and Disease.

in a field where stem rot has once been noted.

In sterilizing the soil by steam there is a tendency to destroy the nitrifying organisms and thereby impair its fertility, but on the other hand the nitrogen becomes more available by the dis-

organizing of the elements of the manure. And as a rule the abundance of water used on the soil tends to add nitrifying organisms to it.

Soil plowed under and heavily manured with stable manure for several years seems to be very prolific of the fungi that cause stem rot.

Mr. May said he had used fifty to sixty bushels of lime per acre on ground where he had been troubled with stem rot, and there had then been no further losses from rot. While he had heard it claimed that sterilizing the soil was an injury to it, his experience was that his plants grew better in soil that had been sterilized than in that which had not.

Mr. Dillon had found that stem rot was most prevalent where plants had been set too deeply in the soil, or where rains had washed soil against the plants. He therefore grows his plants on ridges to insure freedom from standing water.

Mr. Scott had noted that in soils naturally strong in lime there had been but a very small percentage of loss from stem rot.

Mr. Ward believed the conditions that favored development of the fungus were found in nearly all soils and that the fungus affects many other plants. He had found the fungus where carnations had never been grown, as well as where they had. He had lost a large percentage of stock lifted from the field during a hot, dry spell, and believed that weather conditions had a strong influence in the matter.

The matter was further discussed by many others, and it was evident that there was great eagerness for full information on the subject of stem rot.

Professor Woods was given a hearty vote of thanks for his paper and his answers to the numerous questions.

CARNATION NOTES.

Topping the Cuttings.

Those cuttings you potted several weeks ago will be making a good growth now and perhaps you are thinking about topping them, which should be done at the right stage, so as to not lose any time by allowing them to make a lot of growth and then cutting it off; and, at the same time, it should not be done too soon.

Many growers are not particular enough about this little operation and allow their employes to do it any old way as long as they stop them from growing heavenward. Some will be in bud while others will have only the thinnest heart pulled out; one way is as wrong as the other. If you allow them to run into bud you lose some valuable time in which they might have made good breaks and started several shoots and at this stage every day counts. If you pull out only the tiny heart the plant is too young and the wood is not in condition to push out strong branches at once and the growth is severely checked. Often, too, you will pull out several blades and the heart will remain and you will have them to go over again when it grows out. The proper time to stop them is just about half way between these two, or as soon as you can see the joints lengthening out. They should have at least four good eyes, well above the earth, to break from; but do not stop them too high.

Some growers like to have a couple of

inches of stem between the soil and the lowest branch to help prevent stemrot, but I can see no advantage in it. Stemrot will attack one stem just as readily as it will three or four and the lower part of the branches that start below the surface of the soil soon become the same as the original stem, and are, therefore, the same as so many separate plants. The plants grown with the long stems are likely to lie over in the field after a hard rain, which soon ruins their shapeliness.

There is a great difference in varieties, though, and you must study their growth before pinching. For instance, such varieties as Flora Hill, Joost and Jubilee (which really only need topping once except to pick off flowering shoots in case you want extra large plants) should be topped rather high because nearly every eye above the soil will start to grow, but such varieties as White Cloud and Mrs. Bradt should be pinched rather low and as often as possible in order to form a compact, stocky plant which will not only have many more shoots than the straggly ones, but will also be much easier to handle without breaking off branches when housing in the fall, and they will also grow stronger and more upright throughout the season.

It is generally thought best not to stop a plant when re-potting or planting, but to do it a few days before or after, when the roots are in working condition. However, I do not hesitate pinching a plant while replanting if it needs it and I have never seen any bad effects from it.

A. F. J. BAUER.

CARNATION ARRANGEMENTS.

It is surprising that the retailers in the cities in which the meetings and exhibitions of the American Carnation Society are held do not wake up to the

Wm. G. Bertermann, President-Elect American Carnation Society.

advertising possibilities in the competition in the arrangement of carnations. The society offers a silver cup for the best arrangement of carnations, and there was only one entry at Baltimore. The prize was won by Mr. Peter Fisher, Ellis, Mass., and the arrangement is illustrated in this issue.

There should have been many entries in this class by the Baltimore retailers. It would have been of great benefit to them as well as to the trade in general had there been a generous display of arrangements showing the varied uses to which the carnation may be put in a decorative way. This is the opportunity to show the public what you can do when given full opportunity to work out your own ideas. Now that the public is invited to the exhibitions the retailers should make the fullest use of the opportunity.

We trust that the Indianapolis florists will not overlook the prize offered by the society and that the competition in this class next year will be keen.

WALL DECORATION.

In one of the pictures of the Baltimore exhibition in this issue will be seen a wall decoration of wild smilax that seemed to us worthy of a special illustration. The problem of relieving a large bare wall space in an artistic manner was certainly well solved in this case. The design was by Messrs. Black Bros., of Baltimore.

The wild smilax is attached to a wire frame which is held in position by only three nails. The smilax was placed in the frame on the floor and three men then easily put it in position on the wall. The frame is made so that it can be folded over and thereby be reduced to half size for convenience in carrying around. We believe this will prove a useful suggestion to others having wall decorations to execute.

ST. LOUIS.

The Market.

The first few days of Lent have already shown their effect on the florists' business. There is not the rush at the wholesale houses that there was the week before Lent set it. The shipping trade has fallen off and the local demand is rather light. The shipping trade so far this year was never better and it kept brisk up to the closing day before Lent. Prices of course are easier and should the fine weather continue there is likely to be a drop all along the line.

The varieties of roses most called for are more plentiful and also of improved quality. There is no apparent glut of any one variety but there is no telling what will happen in the next few days, as all growers have been off crop at the same time for quite a while.

Beauties are very scarce with demand brisk for long-stemmed stock, \$3 per dozen is the price asked for them just now; Brides and Maids are good, but not over plentiful, \$4 to \$6 per 100 is the best price; Golden Gates are the same; Perles and Woottons are from \$3 to \$5 per 100 for choice stock; Meteor is of much better color but rather small and good stock finds ready sale at from \$5 to \$8 per 100.

Carnations sell well and although quantities of fine flowers are coming in the price holds up very well. The prevailing price for good stock is \$2, with a few extra fancies, \$2.50 and \$3. Klockenkemper is sending in some fine stock to Ellis, Bamford to Berman and the Ladies to Kuehn. Some very fine Lawsons were seen at Kuehn's, which came from the Chicago Carnation Co., also other fine varieties of their new stock.

Bull-stuff of almost every variety is slow; daffs and tulips are a drug and plenty of them are going to waste; Dutch hyacinths are coming in and are in fair demand; valley can be bought in good quality at \$1.50 to \$2; freesias, \$1 and \$1.50; HARRISIA are not plentiful and are selling for \$2 per dozen; callas also have a slow demand.

There are too many violets coming in and the market is glutted, 25 and 35 cents per 100 is asked for them. California have the call; doubles sell slowly and southern stock can't be given away.

In greens there is little change; smilax is extremely slow at \$12.50; adiantum is in good supply at \$1 per 100.

The growers are busy now preparing Easter stock. All lilies are looking well; there is some disease among them, still, it is no worse than in former years. Sanders has a fine lot; his other stock is also looking well. Schray, Fillmore and Beyer all have a fine lot of them, which will be in good shape for Easter. Their other Easter stock is in the best possible condition. Emundt and Guy of Belleville also have a fine lot in good shape for Easter sales.

Notes.

A floral euchre party will be given at the Concordia hall next month by the younger people in the trade. No doubt nearly all the florists of the city will attend and assist the young folks in their undertaking.

Mrs. M. Luackinsmeier has opened a floral store at 2616 N. 14th street.

The next meeting of the Florists' Club will be a notable one. It is not only "mixed flower" night—and this alone will

be worth coming for—but there will be the essays by Messrs. Sanders, Tesson and Berman, which will be well worth spending a few hours with the boys. And, too, at this meeting it will be definitely decided whether we hold a show this year or not. All members should bear this in mind and come and have their say in the matter.

Bowling.

The bowling club rolled three games Monday night. There was a good attendance and some very good scores were made. After the rolling a meeting was held and it was decided to have the ladies with us on next Monday night. All members are requested to be present and bring their ladies with them. The bowling will start promptly at 8 o'clock. The scores of last night were as follows:

	1	2	3	Total Ave.
C. A. Kuehn	209	173	285	222 1/3
J. J. Buehler	188	169	134	164
J. W. Kuntz	159	134	197	143 1/3
C. C. Sanders	175	175	175	175
F. C. Weber	151	148	127	142
Will Adels	142	157	129	142 1/3
John Young	129	129	144	134
W. M. Ellis	122	115	257	115
Theo. Miller	86	134	137	102 1/3

J. J. B.

BUFFALO.

On reaching home on Monday the news abroad is that they all feel the dullness of Lent and flowers are very plentiful. Our great city had not been visited by any calamity great or small so there is nothing of importance to report. All are glad to hear our impressions of

Baltimore.

In our humble opinion the show, for quantity and quality of flowers, was in advance of any previous meeting. It was so differently arranged that it was difficult to compare it with Buffalo's convention. The latter was arranged just to show the carnation. At Baltimore there was more a study to make the whole room effective, and it certainly was. The design of carpet bedding by Mr. Seybold near the stage was well done. The decoration of wild smilax on the walls was most artistic. The group of palms in the center we thought rather high, as it obstructed the view. I know the Baltimore men will excuse candid criticism and I would say the tables might with advantage have been six inches higher. It was inspiring to see the thousands of Baltimore's best people visit the show on both days. Never mind whether it was a free show or not. Such an attendance must do good to the trade. It must stimulate an admiration and desire for the best.

The leading florists of Baltimore are as much to the front as those of any big city, but we noticed dozens of little ones who I don't believe had any idea that such flowers were grown, and I fervently hope that every one of them visited the show. If they did it would certainly widen their vision, as it has in all communities that the society has visited. It was remarkable how the Lawson stood out as the grand flower of the exhibition. It was not exactly Lawson first and the rest nowhere, but as a grand flower, with magnificent stem, it has a clear lead and the result of the show must have made the worthy Peter Fisher feel real good.

My correspondent was altogether too miserable to take notice of all the good things. Every one wanted to see Adonis. It is a wonder, but as you cannot buy it for two years there will be lots of time to make its acquaintance. Norway, Messrs. Weber's white, is, if a satisfactory grower, ahead of anything; in size enormous and perfect in form. Ward's

Golden Beauty is another grand flower that leaves little to be desired in yellow. The markings are very similar to those of old Buttercup, but it is a grand, large flower. We need a satisfactory yellow very much. There were several seedlings which scored high, but your premium list would show all this. There is no finer flower in existence than the beautiful Enquirer, as grown by Richard Witterstaetter, but he will tell you candidly that to make it profitable and produce these perfect flowers it must be grown in pots.

The business meetings were held in rather a cool room for a balthead, but were well attended. The paper on diseases of the carnation by Professor Woods should be read by all. What a lot we owe to these patient researchers. The moral of it all was, or rather the great lesson to be learned is, keep your plants absolutely free of all fly, spider and thrip, for their attacks on the plant is the cause of no end of trouble, which we lay to other causes or bad luck. Mr. Fisher's paper on cross-fertilization and seedlings was grandly plain and explicit, and if we wish to go into the business there will be no excuse that we don't know how. But, gentlemen, be careful, and unless you can afford to face lots of expense and still more disappointment, leave the raising of seedlings to the specialist. There are already plenty of these specialists in the field. The trouble is so few men can lock on their own offspring impartially. In their eyes a very moderate flower appears far superior to others and to its faults they are blind. This is no fairy tale, for I have seen it occur in more than one establishment and almost bigger the owner because he grew his pet to the exclusion of all good varieties and no one wanted his.

The hard work and unbounded hospitality of the Baltimore men was in evidence from the moment we arrived till we left the fair city, and it must have been a relief to some who gave every moment of their time to our enjoyment. There were many little jaunts taken by parties of a score or so and nothing, I believe, could have been better arranged than that mid-day lunch, which was so entirely free and easy yet so much enjoyed. It held us so well together and afforded a good chance for a social chat.

W. S.

CHICAGO.

The Market.

The shipping trade is holding up very well, but local demand is light and there is a luteal feeling in the market. The call is strongest for white and prices on this color in carnations and roses have held up to last week, though they are easier on colored stock. On tea roses the range is now from \$6 to \$8, with a very few sales of extra select at as high as \$10. In Beauties the best bring \$3 a dozen and from that down to \$1 a hundred for the short cripples. There is a large supply of the shorter lengths and a fair amount of the extra lengths, but rather a scarcity of the medium lengths. In carnations the range for good stock is from \$1.50 to \$3, with sales of poor ordinaries sometimes as low as \$1, and even 75 cents, and fine select Lawsons and other fancies occasionally go as high as \$4. In common stock white holds up best in price, indicating a considerable demand for funeral work.

Various Items.

The regular meeting of the Florists' Club will be held at 40 Randolph street tomorrow (Friday) evening. The program includes a talk by Mr. Emil Bretner on the proper presentation of plants and flowers to the public by the retailer, and papers by Edgar Sanders and Aug. Dresel on the florists' business of today as compared with twenty years ago.

Bentley & Co. will soon erect 50,000 feet of glass, all to be devoted to roses and almost wholly to American beauties. There will be five houses, each 28x300 feet. They will be connected houses, with Garland iron gutters. The John C. Moninger Co. has the contract for the express material. The style of construction will be the same as that of Adolph Pohlmann's range recently illustrated in the REVIEW. Otto Bentley, who has been foreman for J. A. Budlong for some years, will have charge of the new glass.

The pilgrims to the Baltimore convention have returned and report a splendid display of carnations at the meeting and a good time generally.

John Muno will soon open a store for the sale of his product at wholesale at 59 Washash avenue. Henry Muno, his son, will be in charge.

B. Eschner, of M. Rice & Co., Philadelphia, was a recent visitor.

NEW YORK.

Growers of cut flowers calculate on two special seasons in the year. The principal one in New York commences with the great horse show and ends on Ash Wednesday, the other from Easter until middle of May. The first is over and all said and done it has been a prosperous one; very good prices prevailed all through the season and the prospects for Easter are exceedingly bright. Prices, it is to be expected, will take a great tumble from now on, for though there are many quiet dinners and luncheons decorated for during Lent, still there is a general cessation of events that demand elaborate attention and profuse ornamentation. It is high useless to quote prices or dwell at length on the present condition of the market just now.

The Eastern New York Horticultural Society and the Horticultural Society of New York met in this city recently and accomplished much good on the lines they are organized upon.

A good display of flowers and plants was made at the American Institute show, held on February 13th and 14th. Lager & Hurrell exhibited some very fine orchids; H. Weber & Sons, Oakland, Md., and C. W. Ward, of Queens, showed splendid blooms of their new carnations. Alex. Marshall, of Pawling, and Herbert Spavins, of Mt. Kisco, showed seedling carnations which were certificated, and other exhibitors deserving special mention were T. Talbot, of Rhinecliff; Wm. Turner, of Tarrytown; G. T. Schuneman, L. I., and J. C. Williams, Montclair, N. J.

The carnation show of the New York Gardeners' Society will be held March 9th.

J. I. D.

JERSEY CITY, N. J.

The grand annual ball of Hitchings & Co.'s Employees' Association, held at Columbia Hall, Jersey City, on Feb. 18th,

was a great success, the greatest the association ever held. About 500 people were in attendance. The hall was prettily decorated by groups of plants and flowers by Geo. Kinse, of Greenville. President Geo. W. Smith and wife led the grand march, with 150 couples trailing in beauty and manliness behind them, and we wish to congratulate the firm, the employees and the committee in charge of this affair for affording a pleasant night to so many and carrying out their plans in a manner creditable to the profession and the great house they represent.

D.

OBITUARY.

John Galvin of Boston.

John Galvin, one of the best known residents of Dorchester and a pioneer florist, died Saturday afternoon, Feb. 23, at his home on Washington street, at the age of 78.

Mr. Galvin was for 18 years City Forester of Boston, and during that time raised the level of the Public Garden several feet, laid out the walks and shrubbery with taste and discrimination, and in general made the spot a place of beauty. For this act alone he deserves a niche in the gratitude of all Bostonians. But many were the other deeds he did, and, still more, many were the personal qualities he possessed which combine to make his loss poignant to the hosts who knew him. Not only the citizens of Dorchester, among whom, at 511 Washington street, Mr. Galvin lived for so many years, but the members of the Boston Club, of the Charitable Irish Society, and most of all, of the Ancient and Honorable Artillery Company, will all feel his passing keenly. His was the nature that made every man his friend and made every friend cheerful and contented when he was present.

John Galvin was born in Ireland on Feb. 5, 1823. He came to America when a young man, and from the first to the last of his life had been connected with the most fragrant of industries, the growing of flowers.

The first employment that he undertook was with the late Thomas Motley, who in those days had a beautiful and extensive residence at what is now the Arnold Arboretum. Mr. Galvin was a trusted employe of his, and retained the friendship and respect of Mr. Motley until the death of the latter. He then established the firm of Galvin & Hogan, in Summerville, and they had extensive greenhouses and grounds in that locality. In a short time he was appointed City Forester, the position later held by Mr. William Doogue. Mr. Galvin held this place for 18 years, and did a great deal of the preparatory and substantial work in all the public squares, the Public Garden and the Common of this city.

Mr. Galvin was the pioneer of the idea of establishing floral stores in Boston. The store which he opened on Tremont street was the forerunner of the magnificent and extensive floral business which has made the name of Boston a household word in connection with flowers in this country. He had retired from active business.

In 1847 John Galvin married Miss Elizabeth Gearin, and from their long, happy, unbroken union sprang seven children, six of whom, and Mrs. Galvin, survive.

ROCHESTER, N. Y.

There were some warm scenes at the recent annual meeting of the Western New York Horticultural Society in this city. Those members who were hard workers only wished to ask that the members looking to the preservation of the compelling nurserymen to bring out more stock to end it of any business of the San Jose scale, while those who were nurserymen opposed such a claim, claiming it was unnecessary and would put them to useless expense. There were some tart passages between members of the opposing factions and but for an impassioned speech by President Barry in which he begged the members to be fair and moderate the society might have suffered an unfortunate split.

A resolution was adopted endorsing the action taken by the Eastern New York Horticultural Society in trying to secure legislation relative to the shipment of fruit packages such as berry boxes.

Secretary Hall's statement of the permanent financial fund showed receipts from all sources of \$3,417.78 and disbursements of \$459.

Professor John Craig, of Cornell University, presented a paper on "Orchard Cover Crops." The cover, he declared, increased fertility and warded off disease. Using too little seed was mentioned by the speaker as one of the chief reasons for failure to make orchard cover crops successful. Professor Craig said some experiments would be made at Cornell in orchard cover crops with a new covering called "vetch."

Professor W. H. Jordan, of Geneva, spoke on the importance of pure food legislation. He spoke of the adulteration of spices with coccolut shell, which he said was a great industry. Out of an examination of 2,000 food products in Commerce, 678 were found to be adulterated and 173 contained salicylic acid for preservative purposes.

He gave considerable attention to the so-called soft drinks, some of which he said contained fusel oil. He called especial attention to the soda fountain drinks which in many cases he found were far from "harmless." Some syrups used at soda fountains, he said, had been found to contain enough aniline colors in one drink to color a piece of woollen cloth six inches square a bright hue.

The following officers were re-elected: President, William C. Barry, Rochester; vice presidents, S. D. Willard, Geneva; J. S. Woodward, Lockport; Albert Wood, Carlton Station; T. B. Wilson, Hall's Corners; secretary-treasurer, John Hall, Chamber of Commerce building, Rochester.

GRAND RAPIDS, MICH.—In the will of the late T. R. Renwick it was directed that the florist business founded by him be continued on the same lines after his death. This was done, but the business became unprofitable and debts were contracted. A petition has been filed by one of the sons for permission to sell the real estate to pay running expenses and all debts, but this is resisted by the other heirs, who claim that the rest of the estate cannot be touched.

BOISE, IDAHO.—At the recent annual meeting of the Idaho State Horticultural Society officers were elected as follows: Pres., I. B. Perrine, Shoshone; Vice-Pres., Prof. F. A. Huntley, Moscow; Sec'y., Robert Milliken, Nampa; Treas., R. M. Gwinn, Caldwell.

E. H. HUNT, SEEDSMAN and FLORIST,

76-78 Wabash Avenue.
CHICAGO.

Wholesale SEEDS, BULBS, PLANTS,
CUT FLOWERS, FLORISTS' SUPPLIES.

We Mean Business.

An incident which occurred in this city Saturday last, the 23rd, caused us to realize the extent to which the trade known as "Red Violets," or the wholesaler selling direct to the consumer, has grown. From this date on we will not sell any cut flowers to any individual or firm who is not in the trade, or does not sell or grow cut flower stock for a profit or living. We mean by this that "OUR RELATIVES," "PARTICULAR FRIENDS," "PARTICULAR FRIENDS' FRIENDS," will not be served over our counter, or by ordering in any other way. We can safely say that 99 and a half per cent. of our present sales are made to people in the trade, and as these people give us our bread and butter, we do no propose to deprive them of any of theirs.

E. H. HUNT.

Chicago, February 25, 1901.

C. M. DICKINSON, Manager.

DETROIT.

At the last meeting of the Detroit Florists' Club the subject of the evening was "The Relation of the Employer and the Employee from the Employer's Standpoint," and the question was most ably handled and discussed by the employees.

Mr. Payne, the gentleman in charge of the weather office, gave a very interesting talk on how the predictions are made.

Pres. Raekham was unable to be present on account of rheumatism and was also kept from attending the carnation meeting at Baltimore for the same reason. RAG.

We wish to call your attention to the value in our Florists' Manual as recognized by many readers. See their letters that have appeared from time to time in the Review.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head.

Every subscriber is entitled to a free advertisement not exceeding 35 words in any issue desired during the year. If the advertisement exceeds 35 words, send at the rate of one cent for each additional word.

SITUATION WANTED—As florist and gardener by Christian young man on a private place; has had 12 years' experience on good places; strictly temperate; can furnish good references; state wages. Address R. P., care Florists' Review.

NORWALK, OHIO.

A visit to Norwalk found the florists in a very prosperous condition. I first visited the Parker Greenhouses, a neat place of 7,000 feet, finely situated. Messrs. G. W. & W. Parker are the proprietors and are hustlers. They grow a general stock for retail trade and contemplate building large additions this coming spring, to meet the requirements of their rapidly growing trade. I next visited Mr. E. G. Peat at the Central Greenhouses, which comprise about 7,000 feet of glass located in the residence part of the city. He, too, will build a house 24x100 for roses this spring. Mr. Peat has a fine stock on hand and the place has a prosperous look. At the West End Greenhouses I found the manager, Mr. Floyd Amerson, looking hale and hearty. He has about 1,000 feet of glass, well stocked, and is working up a nice trade. H. McN.

Carlson's Improved Aster Seed.

Pure White, Rose-Pink and Dark Lavender each, per ounce \$1.00
Large Trade Packet, each75
Small Packet25
Seeds will be mixed when desired at same prices.
It is believed this variety produced the largest flower-heads of any variety, reaching to 2 inches in diameter, according to fertility of soil and method of pruning.
Price to Trade given on application.

Burpee's Seeds Grow

SAN FRANCISCO.

The Market.

Business has been fairly good lately, but the weather has been rather stormy and frosty, causing a great scarcity of outside flowers of all kinds. As a consequence inside stuff is having a little harvest all to itself and prices are very good for this time of the year. I might add that a half dozen new stores have started up lately and they to a great extent have helped to cause a shortage in the supply of wholesale stock.

The quality of roses is fair; in carnations, a good percentage of the blooms are split in the calyx. Maidenhair fern is very scarce and hard to get at any price. Acacia and fruit blossoms of various kinds are in market and sell well. Prices: American Beauties, 50 cents to \$1; Brides and Bridesmaids, 50 to 75 cents; Meteors, 50 cents to \$1; Cecil Banners, 125 cents per dozen. Carnations—Hohart, \$1; Crocker, 75 cents; Bradt, 50 cents; Hill, 35 to 50 cents; Scott, 25 cents; mixed fancies, 35 to 50 cents; Portia, 25 cents per doz. Violets—Princess of Wales, 50 cents to \$1.25; Californians, 50 to 75 cents; Marie Louise, 75 cents to \$1 per dozen. Daffodils, single, 15 to 20 cents; double, 10 to 15 cents per dozen; paper whites, 50 to 75 cents per 100; Roman hyacinths, 20 to 25 cents; freesias, 15 to 20 cents; valley, 35 to 50 cents; Harrisit, \$3.50 to \$4 per dozen. Cattleyas, 50 cents per bloom.

Various Notes.

V. Matraia has opened up a new store at 118 Powell street.

Pouyal of Po-k street will move shortly one block south of his present location.

Stevenson made a handsome crown containing 100 dozen single daffodils, which was used at the memorial services held in San Francisco recently on the occasion of the death of Queen Victoria.

Ben Black, lately in the employ of E. Lacazezette, Fourteenth street, Oakland, has opened a floral establishment right alongside of his former employer. It is needless to say that "they never speak as they pass by." Mr. Black's address is 420 Fourteenth street.

Mr. E. Gill has just finished one new propagating house, 20x45, and is making plans to build a carnation house 25x150. Mr. Gill reports that a Portuguese gentleman came into his store one day last week and ordered a floral piece to be lettered thus: "Josephine Silva, 5 years old, died of diphtheria." The gentleman from Portugal took Mr. Gill's advice and dropped out the word "diphtheria."

Mrs. J. McCarthy has opened a store at the Narrow Gauge depot, Fourteenth street, Oakland, and will do a catering and florist business.

D'Artagon & Baretta, lately of the "Bon Marche," Sutter street, San Francisco, have opened up a new store under the title of "The American Florists," 1064 Washington street, Oakland. They are carrying a fine stock and are in a good location.

Mr. J. Gilmore, Elmhurst, is building three new houses, 16x300, for roses and carnations. J. N.

Good employes are hard to find and not easy to grow. Encourage some one of yours by making him or her a present for Christmas of our \$5.00 copy of "The Florists' Manual."

ST. PAUL.

DEAR MR. REVIEW:—It is six months past since I have reported to you of the Twin City florists' picnic, and the boys think it about time to let you know that we are all still alive here and are enjoying a good winter business. La grippe, in combination with other diseases, smashes many lives without mercy, as Carrie Nation did the beer glasses down in Kansas. Funeral orders every day at all the stores, and consequently good white stock at times is scarce. During carnival times roses of shades were in great demand and the supply insufficient; even today, in spite of Lent, demand for cut roses is unabated.

A week ago Saturday friends of P. Holm, senior partner of the firm of Holm & Olson, gave him a surprise party at his residence; some fifty people were present, enjoying themselves in dancing and singing, and the men folks, mostly florists, in killing a barrel of beer. A present in the form of a nice piece of furniture was given to Pete and his lovely little wife.

The florists just now are hustling, hustling, rustling to get things in shape for Easter.

Our violet specialists, Hagen & Swanson, are wearing happy faces; their violets are in full crop; good sized flowers of the deepest blue. About the end of November they were a sorry looking lot, but through good care and constant watching they have picked up wonderfully.

Henry Puvogel had the finest lot of Chinese primroses ever seen in this city, some 2,000 plants, and they sell well.

Christ Hansen brings the best carnations to market. Seeger is enjoying big crops of roses from his new range of rose houses.

Christ Bussjaeger is planning for new additions this summer.

Chas. Vogt, our "dandy florist," is still looking for a "frau." And there is a half dozen more bachelor florists in this city—H. Strehlow, Johnnie Fleischer, Max Bussjaeger, Johannes Nilssen, etc., etc.—who are all good looking fellows, of good habits, and business owners.

I nearly forgot to tell about our latest boom in the florists' circle—that is, the coal boom; lignite, yes, sir, Dakota lignite at \$3.40 per ton, and smokeless and sootless, which means much for us. It burns freely and is easy and clean to handle. The ashes look like dry sand. However, it was put on the market too late for this season, as most of our florists had already made contracts for coal by the 1st of September. Cheap coal will be a great thing for the Twin Cities; last year we paid \$5.50 for Voughtieny and, by Jove, after paying the coal bills there wasn't much left.

With greeting and regards from all of us,
CHRIST BUSSJAEGER.

ONLY ONE NIGHT ON THE WAY.

From Chicago to St. Augustine the Chicago and Florida Special is only one night en route, leaving Chicago Union station via Pennsylvania Lines at 12 o'clock noon Tuesdays and Fridays, arriving Jacksonville 7:30 p. m., St. Augustine 8:30 p. m. next evening. For special information apply city ticket offices, Pennsylvania lines, or to H. R. Dering, A. G. P. Agt., 248 South Clark street, Chicago.

CHRYSANTHEMUM SOCIETY.

At a meeting of the Chrysanthemum Society of America, held at Baltimore last week, it was decided to offer the society's cup this year for the best 10 blooms of any variety shown at the coming exhibition of the New York Florists' Club in New York City.

It was announced that the sum of \$100 had been offered as a special prize to be awarded under the auspices of the society at the New York exhibition, and Messrs. A. Herrington, J. N. May and P. O'Mara were appointed to arrange with the New York Club as to the classes in which it was to be offered.

In the absence of the president Mr. E. Daillouze presided at the meeting.

HYDRANGEAS.

At what temperature should Hydrangea Otaksa be kept in order to have them in by Easter? The buds are now (Feb. 15) just beginning to show.

W. L.

Any advice I can give on the above will be rather behind time but if the hydrangeas were showing buds on the 15th of February I would consider them in good condition for Easter. The temperature of 60 degrees at night ought to bring them along very well. However, so very much depends on the weather. But you have got them under control and they should not need extreme forcing.

W. S.

FOR SALE OR EXCHANGE—R. Cuttings, 1 cent. New and selected Colons, Agaveum (Gurney, Pauline), Parlor Ivy, Verbenas, Mum's (Frank Harry, Simpson, Bulldeouze, Pres. Smith, Queen and Bonifant); the above in 2 in., 2 cents. Red Amaryllis, ready to bloom, Pompon Dahlias 8 cents, Poinsettias later. Wanted, White Cloud, Mrs. Joost, Mrs. Bradi, etc. Write W. H. FENGER, Granville, O.

Mention The Review when you write.

DENVER, COLO.

Business has been fully up to the standard the past two weeks and Lent has made little difference. The social season came to a close with quite a number of dinners which helped trade along, the presence of Gen. Fitzhugh Lee in town for a couple of days was accountable for the use of a great many flowers, as he was well entertained.

We look with interest for the report of the carnation convention. We did not have a representative there, but will try to learn what we can from the papers. Wonder if you had a Miss Anita Carre "trip" the footlights and sing "I'd Leave My Happy Home" to the baldheads in the front row, and then receive a bunch of five hundred carnations for the song, "a la Buffalo."

Mr. Valentine is still confined to the hospital, but is convalescing so nicely that it is expected he will be able to go to his home by Tuesday.

Recent visitors were Arnold Ringier, Jos. Rolker, A. L. Vaughan and Mr. C. Cropp.

ROCKY.

KALAMAZOO, MICH.

During the past month trade has been brisk and steady; funeral work of a good class plentiful.

In roses, Maids, Brides and Meteors have been plentiful and good; Beauties scarce. Carnations are a little scarce but of excellent quality. Plenty of bulbous stock. Lilies are a splendid crop and promise to be in in quantity at Easter. The disease is not so prevalent as in former years. Roses and carnations are showing up for a heavy cut about Easter.

The Van Bochove boys are cutting some high grade Maids, Brides and Meteors.

It is rumored that some of the firms here are to add largely to their plants this spring.

Celery men are beginning to sow their seed for the first crop. Looks like spring, don't it? RINGS.

Hot Springs, Ark., Without Change.

You can leave Chicago in a through sleeper any day on the Washbas Fast Day Express at 11:03 A. M., and be in Hot Springs next morning at 9:00 o'clock. This is the only line via St. Louis operating a through sleeper from Chicago to Hot Springs.

Write for illustrated booklet giving full information about this popular beach resort. Rates will be quoted and sleeping car reservations made upon request. Ticket Office, 97 Adams Street, F. A. Palmer, A. G. P. A., Chicago.

We Root 10,000 Carnation Cuttings a Week.

CARNATIONS.

ROOTED CARNATION CUTTINGS.—We offer choice rooted cuttings, first-class in every way, at the following prices:

Mrs. Thos. W. Lawson	100, 1,000
Ethel Crocker	100, 1,000
Mrs. F. Joost	100, 1,000
Triumph	100, 1,000
White Cloud	100, 1,000
Mary Wood	100, 1,000
Gen. Maceo	100, 1,000
G. H. Crane	100, 1,000
Olympia	100, 1,000
Mrs. G. M. Bradt	100, 1,000

RUSSELL. Again this has proved the most prolific and profitable carnation, giving us so far fully 75 per cent more blooms than Crocker and eight other varieties under same conditions. It never splits its calyx, which Crocker and some others do so badly. After five years' trial under our ordinary culture, it has proved the most profitable and best all-around carnation we ever grew. As large as Scott and of a light blue color, the respective of the best rooted cuttings now ready at \$2.00 per 100; \$15.00 per 1,000. McGowan Scott, \$3.00 per 100. McGowan Scott, \$1.50 per 100; \$10.00 per 1,000. CHAS. BLACK, Hightstown, N. J.

Rooted Carnation Cuttings	100, 1,000

HYDRANGEAS.

A superb new hydrangea, Hydrangea Hortensis Malesit. This is a grand, unique new variety, sent out by James Veitch & Sons, London, England, last winter, 1899-1900. It is named after their collector, Mr. Maries, who introduced it, and described by them "as having remarkable large, white, prolific flowers, three inches in diameter, color a light pink, shaded mauve, and the finest of Hydrangea Hortensis. This variety is most remarkable and distinct in pots." It is sure to be a success. We offer strong plants, 4 1/2 in. pots, 75c each, \$7.50 a doz. Also white, double, Corvombiflora, a very distinct variety; Deutzia gracilis rosea and Deutzia gracilis venusta, the Azalea leucata, several other varieties of the latter and other varieties. Cash with order, please. John Charlton & Sons, Rochester, N. Y.

WIRE WORK.

C. A. Kuehn, 1122 Pine St., St. Louis, Mo. Manufacturers of the Patent Wire Clamp Floral Designs. A full line of supplies always on hand. Write for catalogue.

We are the largest manufacturers of wire work in the west. McKellar & Winterson, 45, 47, 49 Wabash Ave., Chicago.

Reed & Keller, 122 W. 25th St., New York, Manufacturers of Wire Designs.

E. H. Hunt, 76-78 Wabash Ave., Chicago.

If you need help and you are a subscriber to the Review you can insert a 35 word want adv. one time in this paper and there will be no charge. Extra insertions at the rate of one cent a word.

The most convenient way of applying an insecticide ever yet devised. No pans required—No heating of irons—No trouble—Cannot injure the most sensitive blooms—Very effective. Price 60¢ per box of 12 rolls. All dealers sell it!

Skabcura Dip Co.
St. Louis - Chicago.

The Perfect Flower Pot and Hanger.

I must have a certain amount of plants in my office. I was also for buying up plants. For decorative purposes, I have a collection of 100 lbs.

No matter how many plants you have, you can use the "Perfect" flower pot. It is 1 1/2 inches high, per doz. 50¢. For sale by all Florists' Supply Dealers.

KRICK'S "PERFECT" FLOWER POT STAND.

This Stand is set stable and folding (see cut) and can be raised from 24 to 40 inches.

The top of Stand is furnished with an indurated fibre, saucer, and plants can be securely tilted at an angle by means of a curved rest, and under the flower pot, this is particularly handy when plants are used in decorations, etc. The Stand can be erected and folded on a moment, and when folded quite a number can be packed together, occupying comparatively little space in wagon, leaving a great amount of room for plants, etc.

These Stands are finished in Aluminum and Gilt.

No. 2, inc' using a 1-inch Saucer and Tilting Rest, price \$2.00.

For sale by all Florists' Supply Dealers.

Pat. Nov. 21, 1899.
Open. Folded.

Use W. C. KRICK'S 'IMMORELLE' LETTERS, Etc.

2-inch letters, \$2.60 per 100. Postage, 15 cents per 100.

Krick's Violet Foil...
Price 30¢ per lb. Samples free.

W. C. KRICK,
1287 Broadway,
BROOKLYN, N. Y.

For Sale by all Florists' Supply Dealers. Mention The Review when you write.

REMEMBER your employees have birth days. Also remember that there is nothing else so mutually profitable for you to give them as a copy of the Florists' Manual by Wm. Scott. The price is \$5.00 a copy delivered.

A WANT ADV. not exceeding 35 words will be inserted free one week for subscribers to the Review.

READERS will confer a favor by sending in items of trade interest.

If you have a Lawn

You will want a FINLEY ROTARY LAWN RAKE this spring and you ought to have it early. It will not only save lots of work but it will do it better than it can possibly be done by hand. It will enable you to clean your lawn easily and effectively in the spring and to keep it clean all summer. It will enable you to kill out crab grass and other pests. It takes up grass, either long or short, twigs and loose litter of any kind, stones included, that a hand rake would not touch. It will save its cost in sixty days on any good lawn.

The Finley Rotary Lawn Rake in operation.

Price \$12.00. IT WAS GIVEN A CERTIFICATE OF MERIT by the Society of American Florists at the New York Convention, the judges reporting that they "Believe it to be far superior to anything else in the market."

Send for Illustrated Circular.

REPORT OF THE JUDGES

APPOINTED BY THE PHILADELPHIA FLORISTS' CLUB
TO JUDGE OUR

GRAND NEW ROSE

QUEEN OF EDGELY

PINK AMERICAN BEAUTY.

"We are convinced that this variety is a valuable addition to the list of forcing roses, being in every respect, except color, the exact counterpart of the American Beauty. The color is a beautiful bright pink, which is good, even in the full flowers. The fragrance is also as fine as that of Beauty, and the exhibited blooms showed remarkable vigor."

(Signed) **ROBERT KIFT,**
WM. MUNRO,
JOS. HEACOCK.

N. B.—Two of the above Judges received first prizes for American Beauties at the Rose Show of American Rose Society, New York, March 27, 1900.

THE RETAIL FLORIST.....

Flowers as Valentines.

From all over the country come reports of an extra demand for violets on Valentine day. There was an extra call for these flowers in New York that day, but some of the leading florists offered many specially arranged baskets and boxes of forget-me-nots, valley, etc., which sold exceedingly well. Thorley had his window filled with small hampers which were tied across the lid with broad ribbon bows, spray of roses or other flowers in the bow. They looked very "catchy" and sold well. Other Broadway florists had small colored-handle baskets tied with ribbon and filled with small flowers; these baskets were hung in garlands the full length of the windows and made a very attractive showing. Many made special preparations for Valentine day in this way and had the offerings neatly marked "Floral Valentines," and though none will say the sales were very extra still they feel repaid in many ways for the expense and trouble they went to.

Plants.

Many of the New York stores are making special displays of flowering plants in their windows at present. These plants seem to be the forerunners of what we are to expect for Easter.

The second and third rate stores are again making French paper dolls out of azaleas, etc., and the crimes committed in the name of art in these places are as bad as ever. Anyone of an artistic temperament must needs wear blue glasses and close his teeth when passing the windows or visiting the stores of some who claim to be floral artists. The man or woman who chokes up and entirely obliterates the beauty of a well grown plant with crepe paper is an enemy to the florists' trade.

We don't wish to be misunderstood. Mr. Editor; moderation in crepe paper is like moderation in drink, excess is vile. Many hundreds of plants die prematurely because of lack of water on account of dread of wetting the paper. A good plant in a clean pot needs very little fixing up, but there are many plants which though ever so well grown, need some trimming to sell them, and the first class stores this year will either make them up in baskets or use the new matting which can be made very artistic.

This matting is made of wood shavings and is dyed in a few pleasing colors, and some abominable ones. It was introduced last fall by a New York basket maker and though its adaptability was up till recently only recognized by the few, it promises to be generally used this Easter. It takes the place of crepe paper and is not damaged by water as easily as that material. Some first class stores have at the present time this matting in use, and it is far superior to the

old material. We shall give you some illustrations of it before Easter.

For Easter.

There does not seem to be anything specially new in sight for Easter at present (and we cannot see how it can change). There will be nothing but the same old kind of stock to offer. Azaleas will be more abundant, and some growers must have either been humored or else they show ignorance on the varieties of azaleas they should offer to the American public. Variety may be the spice of life but it doesn't always produce the wherewith to sustain life. There are one or two varieties of azaleas specially valuable to the American trade, and each year it seems more difficult to get these favorites, unless you buy poorer varieties with them, or pay extra.

Everything points to a record breaking Easter and we fancy that retailers will be able to dispose of enormous quantities of plants if they are in good condition and are presented properly. But you need not wait till Easter; many a good sale can be made during Lent. No store should be without its sample basket of plants or flowers; there's no telling what'll buy or when a thing will be sold. If you are out for business be always prepared for it and have some enticing basket before the nose or at least the eye of your customer.

Made up baskets of flowering plants will more than ever be the leading feature in the principal New York stores this Easter. Lent, after all, is not the wet blanket to the florist business it is supposed to be. True, there is an abundance of stock left over on the market, but then there should be plenty of stock at this time of the year; it would scarcely do to have at all times flowers as scarce and as dear as they are in December and January.

Lenten Demands.

There will be quite a demand for flowers during Lent, but it will be more in the nature of an undercurrent—a somewhat subdued light, which the florist can help to protect by an exercise of diplomacy, for as a rule people who entertain during this season (and many a large affair is hooked to come off) don't want the matter advertised; they naturally expect the florist and caterers to keep quiet and not give information to newspapers. We have known many a florist to lose good customers on account of someone in the store giving reports to sensational newspapers which exaggerate and ridicule the events. Some people love to be advertised other's don't, the florist needs be careful, more especially during Lent.

At the present condition of the market nearly all can afford to be a little more generous than circumstances have permitted for several months past. We are prone to imagine it has been a some-

what hard season for small florists whose entire trade almost depends upon those who could not afford to pay high prices, and prices have been very high this winter. Now, however, opportunities will occur where all may give a few flowers where they will do good, or will be enabled to give their customers an apparent value for their money in the way of well filled funeral designs or in other orders. Grasp any and every possible chance when flowers are cheap to dispel lingering memories of having been overcharged in the past, for as with yourself, so with your customer, both are human.

Boston Ferns.

It seems hard to understand how with all the growers around New York it is impossible at present to find any well-grown Boston ferns, especially in pans. We had occasion last week to seek a 10 or 12-inch pan of this fern and applied to all the specialists for it, and was informed that they were all sold out. This is an annual occurrence; there is always an abundance of this fern or the early part of the season and the growers are always in a hurry to get rid of them; no provision is made for this part of the season, and the result is that there is considerable difficulty in filling an order. Some wise grower will perhaps take a hint and provide for this time of the year.

Other Plants.

Primula chinensis sold well in this section of the country this season. Once in a while a few extra fine named varieties were seen. One grower had his grown three or four in pans and in separate colors and they went quickly. This plant is as a rule too small to offer singly; many were sold made up in baskets of four to six, but the best way to offer them is grown in pans. You might mix some, but they are apt to sell quicker in separate colors. Primroses of all sections will sell well this Easter if presented properly. The one offered by Dyer a few weeks ago is a grand thing and a great favorite around New York.

Variegated cyperus is a thing that sells well; more of it should be seen. Some are looking for camellias with but poor results. Anyone with a stock of these old time favorites in flower for Easter would sell them very quickly; we might see them offered next year. People who have acres of glass and who are continually looking for "new things" can with profit look back and pick up some of the old things.

Flowering Shrubs.

Flowering shrubs and fruit trees such as Forsythia, Cydonia japonica, spiraea, almonds, peach and lilac have been coming in for some time and have been used extensively in decorative work. This kind of material will of course be popular for spring weddings. An arbor of Japan quince with an interlacing of growing-like Cusin roses is fit for any queen to be married under.

Some very pretty wreaths have recently been made from Florida magnolia foliage. Use large leaves for ground work and finish off with small ones.

For a time it was quite difficult to get any respectable looking outdoor ferns. Dealers in that kind of stock

olated the weather. We were always under the impression that weather could have no effect on the stock as it is preserved.

Leucothoe sprays, both bronze and green, are being much used in New York for a background to flat bunches or as sprays in cut flower boxes. They are very useful with large flowers.

IVERA.

POINTS TO RETAILERS.

At the last meeting of the Chicago Florists' Club Mr. E. Buettner led in a disquisition as to what the retailers should do to increase the sale of flowers. He sharply criticised the window displays of most retailers and said the vases of flowers of all colors were usually jumbled together without any taste whatever. If a customer comes in several of these vases of flowers are set before her to select from, and the seller depends entirely upon the quality of the stock to sell it. He held that sales could be much enlarged if stock was presented in a more attractive manner and instanced the expansion in the trade in plants, since some effort had been directed to-

ward presenting them to customers in such a way as to bring out and enhance their decorative value.

He was positive that two bunches of flowers could be sold where one is sold now if the retailers would study ways of presenting their wares attractively, as there are lots of people who will buy if the desire for possession is raised by an attractive arrangement. He told of an instance he had noted where a bowl of wall flowers had attracted no notice from customers until the retailer had made a pretty arrangement of them in a hamper. It quickly sold at a good price and others followed as fast as they could be made up.

He continually emphasized the necessity of tempting the buyers by artistic arrangement rather than depending upon sales by the dozen merely. He held that a pretty bunch of two dozen carnations could be sold in most cases to the lady who had called with the intention of buying but one dozen. He held that there had been more progress in the attractive presentation of groceries to the prospective buyers than in flowers. He also spoke of the importance of prettily arranging flowers in the box for delivery.

The various points mentioned were endorsed by several of the retailers pres-

had intended to merely admire. Some had come to look for these changes and occasionally they had an inquiry as to what the main feature would be next week, showing a lively interest had been developed.

The growers and wholesalers were touched up a little in regard to laxity in properly grading their stock. There were some interesting good natured passages at arms and the meeting was a lively and interesting one.

THE CYCLAMEN.

The accompanying engraving is from a photograph taken Jan. 25 of a house of cyclamen plants being grown for seed at the establishment of Messrs. Lehnig & Winnefeld, Hackensack, N. J. The house is 12x100 and contains about 500 plants, which have been selected for seed growing from a lot of about 14,000.

They say that with the cyclamen more than anything else it is necessary to have good strong seed to produce good flowering plants. The seed plants must be vigorous and healthy and of medium size, namely twelve to fifteen inches in diameter, and the foliage distinctly marked. The flowers must have a strong, stiff stem, not too long, but sufficiently so to carry the blooms well above the foliage. The flowers must be perfect in form, of good size, and last, but not least, of a clear and desirable color. They take no striped or double ones for seed purposes.

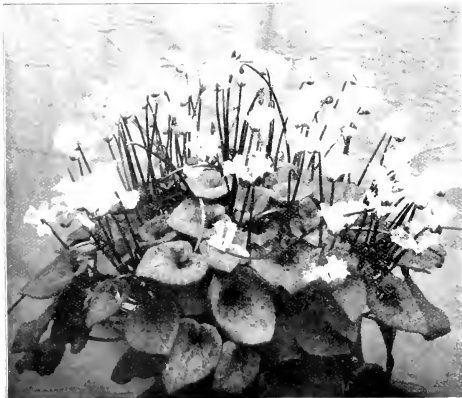

The plants seen in the picture are supported by model carnation supports, the idea being to hold the seed pods up in an airy position and protect them from water and damage from lying on the soil. They allow fifteen to twenty seed pods to form on each plant, and whenever more flowers appear on the plant they pick them off to avoid any overdraft on the strength of the plant.

From now until the seed ripens the plants will require even more water than before, and it is well to give liquid manure once a week. The seed will ripen by May and June and will be ready to pick as soon as the seed pods show signs of bursting. Each pod contains fifty to one hundred seeds, which at first are white, but soon turn to the familiar brown color.

In regard to culture Messrs. Lehnig & Winnefeld say: "Seed can be sown from August till September in boxes or pans having good drainage. Keep well moistened. In about six weeks the young plants will make their appearance, and when the second leaf appears they should be transplanted. We have heard it stated that good cyclamen can be grown only in leaf mold. It is, of course, a good thing if to be had, but we have seen exhibition plants grown without any leaf mold whatever.

"If you have good airy houses with modern ventilating apparatus, grow them therein. If not, then use frames with top and bottom ventilating. Do not house the plants in the fall until there is real danger of frost. Give a light and airy house and keep the temperature a trifle lower than for carnations.

"The demand for cyclamens at Christmas time is very rapidly increasing. Though we have increased our number of plants every year, we have never been able to fill all orders. Many more plants could have been sold in New York last Christmas had they been obtainable."

Cyclamen Grandiflora Fimbriatum.

ent. Mr. E. Wienhoeber said that the neater and prettier the bunch presented to the customer the easier it was to sell it, and often a much larger quantity was sold simply because the customer wanted the arrangement as it was, even if it did contain more flowers than she had intended to buy.

Mr. E. Enders, with C. A. Samuelson, further emphasized the matter. They make it a point to change their window display frequently, and are constantly studying on new features. Often a glimpse of something in the window, or the general effect, brings a passing carriage and its occupant back to the store and generous sales result that would have been lost but for the window display. And regular customers come frequently to admire the new features. As a result sales follow when customers

ward presenting them to customers in such a way as to bring out and enhance their decorative value.

He spoke of the average bunch of violets as resembling Kruger with his whiskers and scored the retailers for being content to offer violets to their customers bunched just as they came from the growers. He said the growers were not supposed to be artists, but the retailers ought to be, and should make some effort to show it.

He mentioned the great care given by dry goods merchants to displaying their wares to best advantage, and the fact that their best talent is devoted to the arrangement of their window displays in a way to attract buyers into the store. He felt that the great majority of the retail florists were woefully negligent of their opportunities in this respect.

House of Cyclamen being grown for seed at the establishment of Lebnig & Winnefeld, Hackensack, N. J. Photographed Jan. 25.

The second engraving is from a photograph of a plant of cyclamen grandiflora fimbriatum. This is not the so-called Papilio or Butterfly cyclamen, but a new strain that they believe will be in great favor in the near future. It is certainly very attractive.

CARNATION NOTES.

In the Review of Feb. 1, Mr. Marquise takes exception to what I have repeatedly said about the carnation Marquis being a late bloomer under ordinary culture. Now, I do not object to being corrected whenever I am in error and we are all liable to make mistakes. What I have written in these notes from time to time about different varieties has been usually the result of personal experience, although in many cases I have been able to learn the experience of several other growers and in such cases I always consider their experience as well as my own in sizing up a variety, and especially the new ones.

Mr. M. is quite right when he says that just because a grower fails with a variety the first year it is not positive proof of its worthlessness; but, I think, that when a variety comes in late with you and you hear of many others who have the same experience, and you can hear of no one who has it in bloom early, you can hardly be blamed for branding it a late variety. I have seen several batches, and heard of many more, that acted the same way as ours, and so it can hardly be my fault altogether. But, of course, sometimes we misjudge a variety, which is proven by the fact that Mr. M. had Marquis in full bloom in September and had it continuously in bloom ever since. But does not this prove also that Marquis does need special culture to bring it into bloom early? Is it not possible that Mr. M. treats it differently than most varieties are treated and that he has lost sight of the fact that he has changed the treatment to suit the needs of the variety? I think that this seems more reasonable than to think that all the most successful

carnation growers in the country should fail with the variety, when they grow other varieties to perfection.

The fact is, that these growers, not knowing that it has this fault, handled it just like they do other early varieties, which, of course, they would not have done had they known of this peculiarity. At least some of us would have been able to overcome this fault had we been warned in time. Now we know it, and many of us will grow it next year and, I hope, profitably, as it makes grand blooms, which will find a place among the topnotchers anywhere. But we have lost a season's profit, and the variety has suffered in popularity which could have been avoided by a mere bit of frankness on the part of the disseminator.

Is not this good proof of the value of the suggestion I made some time ago in regard to the disseminators giving us more information regarding the peculiarities of the varieties they are introducing? Mr. Fisher has told us how to get longer stems on Mrs. Lawson and Mr. Marquise has promised to tell us how to get the Marquis into bloom early, but many of us do not need to be told now in either case. We have discovered the faults and we know how to prevent them in the future, but had we been told last spring or summer, it would have saved us a good many dollars this winter. I have spoken to many growers in regard to this matter, and all seem to think it would be of great benefit to all concerned. All except one, who feared that if the introducer recommended certain treatment and some one who followed it failed to be successful with the variety he would blame the introducer all the more. That sounds all right, but it is not to go so far as all that. He can say the variety needs early planting, or it must not be pinched late, or it needs more or less heat than most varieties, and that it does best with him in about so many degrees of heat, or plant it in a heavier or a lighter soil than the average variety wants, and so on, whatever its peculiarities may be.

I am well aware that the same va-

riety often does well with different growers with very different treatment, and it would not always be necessary to follow the methods employed by the originator to attain success; but the originator usually has from three to five years' experience with a variety before it is sent out and he usually knows its faults as well as its merits, and he can tell you what to guard against if he wants to. A variety should not be condemned right away on account of these little peculiarities unless they are serious faults which render the variety inferior to other varieties of the same color. There is not a variety in cultivation today that has not some peculiarities of its own which perhaps no other variety has, and it will most likely always be so. All hybridists are well aware of this.

I have heard occasional complaints about E. Crocker not keeping well after being cut, and we had the same trouble until we found out just at what stage to cut it. Now we allow them to open full before cutting, and it keeps fine for us. Just to try its keeping qualities, I cut three blooms of Crocker and three blooms of Mrs. F. Joost on Feb. 17, and put them into a vase together, and set them in a bedroom which ranged anywhere from 45 degrees to 60 degrees, according to the weather. On March 1 one Joost went to sleep, and the next day the other two closed up, while the three Crocker remained fresh until March 3, when two of them closed up, and the remaining bloom of Crocker looks as though it would last at least two more days. I have kept carnation blooms longer under more favorable circumstances, but we all know what a good keeper Mrs. Joost is, and as Crocker kept longer than it did in the same vase, it proves that it is a fine keeper when it is cut right. A. F. J. BAUR.

If you want a copy of the Florists' Manual, by Wm. Scott, and cannot spare the full price (\$5.00) at once, write us for our monthly payment offer.

MISCELLANEOUS SEASONABLE HINTS.

Easter Plants.

There will be no question of so much importance to the grower now as the condition of his stock for Easter, whether backward or too early or just right, as he thinks. If we knew exactly what weather to expect we could regulate things pretty closely but that, very properly, will always be unattainable. It is, by the time those lines are in print, only four full weeks until our crops should be ready for the market.

Azaleas.

Azaleas that have been kept in a greenhouse all winter are rather too early. That is, several of the best sorts. You can usually find one end of a house where you can place the forward plants and shade them heavily, at the same time giving them air day and night if possible. With small quantities you can even stand them beneath the bench on full, bright days. We find the majority of people who will pay three or four dollars for an azalea don't want them too full out.

A few years ago we had a hundred fine plants in full bloom two weeks too early and put them in a cool, dry cellar or basement. It answered the purpose after a fashion but they lost color and did not look fresh and attractive. Retard them before they open their buds if possible. In a milder climate than ours a deep cold-frame with air and shade would be an ideal place for these early varieties, but in case of a zero night it would necessitate a good many blankets.

Lilies.

In Philadelphia I saw thousands of Japan longiflorums that were in plenty of time or what I considered about right. If they are now clearly showing their buds you have them safe. The Harrisii that I have seen and the few that we have are early in time. There is no trouble about them, but the Japans want a good deal of forcing, 65 degrees at night is not overdoing it, and where the buds are only just showing they will need that temperature. Now my plan, where you have a big batch of Japans in many degrees of earliness, some with buds two inches long and some only just showing, would be to give them all as much heat as you have at your command and not move out one of them till the first bud was ready to open. Remember they will last two weeks after they are open and when taken from a very warm house and put in a cool one when the buds are about half grown they will often stand still. Rush them all along. The earliest Japans will easily keep till Easter if removed to cool, shady houses just as the buds are beginning to open. When the buds are above the foliage the green fly is easily kept down, so fumigate mildly twice a week.

Lilac.

Lilacs will come along nicely in four weeks in about 60 degrees at night and

will be more satisfactory if kept in a cool house for a few days if you should happen to have them too early. We have kept them in a moist cellar for ten days in perfect order.

The Crimson Rambler Rose.

This is now a standard Easter plant. When down east two weeks ago I had to take a good lecture from expert growers like Robert Craig and Mark Mills because I will confess gladly that as Mr. W. K. Harris and Mr. Craig force these field grown plants nothing better or finer can be desired, but we have not yet been able to manage it. The secret is, they should be on your own place and not a particle of drying out should occur. When shipped some distance with ordinary packing they do dry out and dry canes that won't break is the result. If fine canes can be produced in 8 and 9 inch pots the previous summer they have the advantage that every eye will break and will force with ease. As I may tire my readers on this subject I will say, get some young plants this spring and plant them in your own field. If they make four or five good canes you can lift them for forcing next November, but they make much better plants by cutting back next winter and letting them grow one more summer.

Now about our Easter plants; if you can see the truss on the end of the growths they will be all right. They come along very fast the last two weeks. The flowers have a better and deeper color when grown below 60 degrees than they have when forced much above it. We were never troubled with red spider on the Rambler because we always gave them a daily syringing till the flowers are open.

Azalea Mollis.

Azalea mollis forces easily in four weeks in about 55 degrees. They sell fairly well because there is nothing like them in color. In hot weather the flowers drop quickly, but at Easter time they last fairly well.

Deutzias.

Deutzia gracilis should be showing their little sprays now. It is much better to bring it along in a cool house. I believe in this plant for Easter, for it pays to cut if you don't sell it in pots.

Spiraeas.

It seems we can't do without *Spiraea* or *Astille japonica*. Some force this plant in an extraordinary short time. Ours are just now showing their spikes above the leaves and in 50 degrees at night will be on time. I have before now recommended that every plant be stood in a saucer and a little water be put in them. This will save you one watering a day and add much to the robustness and color of the foliage and size of

flower, and when you sell a plant tell your customer to keep them in a saucer and saturated. If not they are the most unsatisfactory of plants. In a church decoration I have seen them wilted by noon, especially if the sermon was dry.

Genistas - Acacias.

Strange to say our *cytissus* (*Genista racemosa*) is not a day too early this year. Usually they are wanting to flower about this time. Not a very satisfactory plant outside of a greenhouse, but what have we else but the *cytissus* in its color? I know of no bright yellow, except perhaps the *Acacia arnata*.

These are fine with us this year. Plants that were pruned short back after last Easter and in June plunged out of doors have made a number of growths of two feet long covered with their little globular flowers. They have a bad propensity of rotting quite a percentage of their flowers, but even when in the best of order they do not sell as readily as such an attractive plant should. Keep them quite cool; they are sure to be in time.

Bulbous Flowers.

Bulbs have now been forced so long and well that you would think everybody knew every point about them, but we occasionally get a chestnut fired at us. If the tulips and hyacinths have been frozen this long, steady cold spell they will want a week longer in the house than if they have not been frozen, for if in the latter state they have been continually growing and soon jump into flower when given heat and daylight. Considering that winter is likely to be with us at Easter and the week or two preceding I would say, to be safe, give the Dutch hyacinths and daffodils two weeks, the single tulips seventeen or eighteen days, and the double tulips twenty-one days.

Lily of the valley is always a favorite at Easter. You ought to put an extra lot in the soil for that date, allowing about twenty-one days. This will give them plenty of time to be fully out and a day or two to be in the water before using. WILLIAM SCOTT.

ROSE NOTES.

Sub-Watering.

Considerable has been said about sub-watering carnations, but so far I have heard nothing about sub-watering for roses. I have had opportunity to devote some time and study to sub-watering for both carnations and roses, and was very favorably impressed with the results. I am of the opinion that when sub-watering is more fully understood its value will be more appreciated and the existing prejudice against it will be removed.

It is of special value in growing American Beauties. It assures having the top of the soil and the foliage dry while there is still sufficient moisture at the roots. There is no baking and cracking of the soil as the result of heavy overhead watering, and the soil can always be kept loose on the surface. The tendency to black spot is greatly reduced, and the labor saved by this system of watering will pay for the extra cost of building the beds in less than a year.

The beds for sub-watering can be made in many different ways. The great point is to have them water-tight, whether

raised benches or beds in the cold soil. I prefer the latter, as they are more substantial and also cheaper. The walks are lowered so as to raise the beds somewhat to make it more convenient for working among the plants. For the sides good planks are used and they are held in place by small iron pipes across the bed. First the soil on the bed is well firmed, then gone over with loam or clay, which is also brought up the side of the plank. Then the whole is cemented over.

The beds should be about ten inches deep and as level as possible. Owing to the grade of the house it is generally impossible to have a bed level the whole length of the house, so it may be necessary to divide it into sections of from 25 to 35 feet. The sections are separated by cemented walls, which need be only an inch or two higher than the tile and which do not interfere with planting. On the surface the bed will be as level as any other. In a bed from five to six feet wide one run of 3-inch tile was found sufficient. In the center of each section a tee is placed and a tile attached that will rise above the

no overdry or overwet places as so often happens with top watering.

The soil should always be fairly on the dry side before giving water. I find that 2 to 2½ inches of water in the bottom of the tile, given at one time, will bring the moisture near the surface of the soil though the top will still look perfectly dry. One watering is sufficient for a week and often for two weeks.

Those not acquainted with sub-watering naturally suppose that the soil is more apt to turn sour. My experience has been that when properly handled the soil is not nearly so apt to turn sour as on raised benches. The reason is that the sun and air can always easily penetrate the soil, which can not always be said of raised benches. For roses, hybrid teas in particular, sub-watering is of great value. Some growers have used it with great success and it is well worth a trial by any grower. M. STAUCH.

BLIND WOOD.

What is the matter with our roses? They were planted the latter part of April last in good soil composed of potted

plant soil, plenty of manure and plaster in the form of a mulch on top of the manure.

If there is no defect in the location it is probably that the plants have received last fall was the cause of the trouble. But if given good treatment since then they should have recovered from the set back by this time.

It is likely that J. W. M. here referred his roses too much at times to the general, and may have kept his houses too small and close and in this way exhausted his plants. I would advise liberal feeding, plenty of air whenever possible and an even temperature not over 58 degrees at night.

M. STAUCH.

AMERICAN BEAUTY TROUBLES.

My Beauties are planted in solid beds in five inches of soil, with broken bricks underneath for drainage. They gave me a splendid crop in December, since which time I have had very few flowers. They appear to be in good health and are sending up strong shoots from the ground, though they have been losing some of their lower foliage. Some of these shoots are now setting buds when two or three feet in height.

I notice a ring around the neck just below the bud. If allowed to remain the buds turn black and break off at this ring. There is a small cavity with a black lining, but I have been unable to discover any insect. Two of the beds have received several weak applications of manure water. The other bed has received none, but the trouble appears to be just as bad on this one bench as on the others.

They have been kept at a temperature of about 60 degrees at night, with a rising temperature of 75 to 90 degrees higher in the sunshine. Can you tell me the cause of this trouble?

I notice that Mr. Stauch recommends lifting the old plants and planting in fresh soil after they have been cut back and properly rested. Can I not carry over the old plants without lifting after they receive the proper rest, if I cut them back and remove some of the top soil, putting on fresh mulching the same as with Brides and Maids?

Are cuttings of this rose unfit for use when they drop their foliage in the cutting bed, provided they are well rooted?

— SUBSCRIBER.

It is difficult to determine what may have been the cause of the trouble described. It is probably what is commonly known as "blight" or "blast," which is caused or accelerated by the presence of either parasitic fungi or insects, or by atmospheric influence. The disease is fostered by a warm, moist and confined atmosphere. I would suggest keeping the house cooler, giving plenty of air and syringing no more than is absolutely necessary.

The Beauties can be carried over in the way described, but I have found it best to transplant.

The cuttings that have lost their foliage but are well rooted are not unfit for use, but they are inferior to those that retained the foliage. A cutting that has a leaf on will start to grow sooner after potting as well as making a better plant, and the principal loss after potting is generally among those that have lost their foliage.

M. STAUCH.

New White Carnation Hoosier Maid.

surface of the soil to admit the water. The bottom of the bed up to one inch above the run of tile is filled with rough cinders on which about five inches of soil is placed. The soil should be well firmed and the bed is ready for planting.

The first watering is done from the top in order to help settle the soil around the plants, but afterward all watering is done through the tile. It is an easy and at the same time a sure way to get an even degree of moisture all through the bed, especially if the sections are not too long. If the bed is level it will also dry out evenly and there will be

soil and cow manure with a little lime added. The growth is mainly healthy, but they produce blind wood to a great extent and not more than ten per cent of flower buds.

We can think of no cause for this unless it might be due to not starting the fires early enough in the fall, as the result of which they were badly mildewed. Please suggest the cause and remedy. J. W. M.

Blind wood is often the result of exhausted soil. Roses that were planted last April should by this time be sup-

VIOLETS.

These notes are not written with the idea of imparting wisdom to the old violet grower, but with the hope that now and then we may give some ideas gained from several years' experience in violet growing that may help the novice to attain success.

As I mentioned a short time ago, the taking of stock for next season should now be well under way and the balance needed should be hurried up. If possible, propagate twice as many as you will need, so that you can fill your house with your choicest stock and still have enough left to grow outside to entirely refill the house if for any reason those planted inside do not grow as you wish and you have to throw out a part or all of them. As a usual thing, this surplus stock will find a ready sale to the less fortunate grower who finds himself short or has an extra house that he suddenly concludes to fill with violets, and as the prices generally run, such stock should pay for its care at least, and it is worth much as an insurance against having to purchase stock yourself.

Do not take cuttings from plants that at this time show small flowers and weak stems, with poor, light coloring, and that have made a rapid soft growth. It is time and labor thrown away, the results are so insatisfactory.

All such runners as have struck roots into the soil before removing from the plants can at once be pricked out in flats of soil without any further trouble. Those that have struck without going into the soil (air struck) will have to go into the sand to root, and the aerial roots should all be trimmed off, as they are too hard to be of any use, even though to look at they seem to be all right.

If you find yourself short of room in your propagating bench, you can make a very good substitute of ordinary flats, boring four to eight holes in the bottom to insure good drainage. Cover the bottom over with moss, say half an inch deep, enough to keep the sand from running through; fill with sand and put your cuttings in these, keeping them in a cool place without too much draught, and you will find that they take the place of the propagating bench very nicely.

Do not make the mistake of leaving them in here too long, as they should be treated the same as if rooting in the usual bed, and be pricked out in the flats of soil as soon as struck.

It sometimes happens that you have to put the flats where they get a stronger sun in the middle of the day than is desirable at first, and you must take care to shade properly with papers, taking the precaution to see that they do not lay down flat on top of the plants, permitting no circulation of air underneath, for this is nearly as bad as nothing, perhaps quite as bad. Some tall labels in the corners of the flats are good to keep the paper up.

We have been growing Farquhar (as well as Marie Louise) now for a good many years and in that time it seems as though it had changed in many respects. The first year or two we grew it we declared (as many others have) that there was not a particle of difference between it and Marie Louise. We even thought the latter the better, if there was any difference. But as we grew it more it seemed to grow out of its tendency to

springing so much easier than the Louise and the flowers are generally much larger and borne on much longer stems. We have this season come to the conclusion that its tendency to give "bullheads" is caused by too low a temperature, and also perhaps to too rich a soil. The latter opinion is held to more by my foreman than by myself. But on one thing we agree, and that is that Farquhar wants a temperature several degrees (just how many we have not settled to our satisfaction) higher than Marie Louise. As a result we intend the coming season to give the warmest border to Farquhar and the coolest to Louise.

We have not mulched for several years, thinking that on the whole it tended to help rotting in a damp spell more than it did any good otherwise, and yet a grower called recently who thinks it is the only way to do. He grows good violets and we consider ours fair, yet we are following different methods. But our soil is heavier than his and he may need the mulching to maintain a more even degree of moisture. R. E. S.

TODAY AND, TWENTY YEARS AGO.

BY EDGAR SANDERS.

(Read before the Chicago Florists' Club, March 1.)

In some respects to me it does not seem so long ago, but how few of the old guard are still in the harness, and what a change, my countrymen, has come over the scene.

Twenty years ago—let's see, who and what did we have in the florists' way in Chicago in the year 1880. In many respects the difference now and then is magical indeed, in the flowers used, the general make up of them, and things generally.

Twenty years ago we had no Florists' Club, no florists' directory, no bowling club, no quartette, no liveried driver and tiger, with a fashionable turnout, no fakirs, no hells, no trade papers. It is just about that long ago that I as one of the first starters in this city, retired from the field as one of your competitors, to make room for others to follow.

How many florists had we then in the business, what did they grow, and how different from our own times? Let me see—our city then numbered 503,185 souls; it is now nearly four times that number. The city paper covered but thirty-seven square miles, now 186. There were then inside the city limits sixty-one florists' firms, fifteen of these doing business as retailers in the central part and one wholesaler. These fourteen, by the way, then did the cream of the trade of that day in flowers. This is all changed. What these in the center now sell, exclusive of the fakir, is but a drop in the bucket, so to speak, of all the flowers that are grown and sold in this city. Shipping either into the city, or out of it, was then but an infant as compared to now. It would be hard to say how extensive a field Chicago's supply comes from, and harder still to say where Chicago flowers are not shipped to.

Besides the sixty-one florists in the city limits twenty years ago, there were forty-three firms in nearby towns, a total of, say, 104 firms, as I make it. Last year my computation was 377 firms in the city and 140 outside, a total of 517, all kinds. If that is correct, in 1880 for every 4,338 inhabitants there

was one florist firm; in 1900, one for every 3,477; less difference after all than I had imagined.

Twenty years ago one commission house had just started, and peddled the few flowers sent in among the retailers for a customer. Now we have from fifteen to eighteen wholesale houses alone, to 500 and odd grovers and retailers, but the buyers now do the hustling. Here is a remarkable change indeed. So much so, that 50,000 roses or carnations could easily be picked up today for a rush order than 500 could twenty years ago. No longer than twenty years ago an establishment with 5,000 feet of glass was respectable, a range of ten houses 20x100 worth going to see; double that, a big place indeed, with lots of the smaller ones, still heating with old fashioned flues, and houses glazed with 7x9 and 8x10 glass.

Now, any one with less than 50,000 feet of glass is not in it; a quarter to a half million feet is the idea. The big eight who wholesale their own cut easily go 2,500,000 feet of glass, lumped together, and mostly in roses and carnations at that. Why, the money paid for coal by one of these giants alone would be a handsome take of the biggest of those of twenty years ago.

Of the fifteen firms credited to the central part of the city twenty years ago, viz.: J. C. Vaughan, John E. Bohan, W. D. Chandler, James Farrell, August Gutzloe, Albert J. Hovey, Mrs. C. Kriek, C. J. Kruger, Charles Reising, Edgar Sanders, Fred A. Schiller, W. T. Shepperd, and R. S. Watson & Co., not one is left in the original business in this year 1901; as the outsiders there are a very few originals; as a rule, they are all new, the big ones, the oldest but a decade old; several even less than ten years old.

What did they grow twenty years ago? For one thing, not now seen, white balsams ran a close race with carnations, the old double white primula an important feature; camellia flowers also still in the ring. Disbudded carnations not thought of for ten years after; every bud expected to perfect a flower, and good sales at that. Tuberoses grown extensively nearly all the winter, a highly profitable crop at 3 to 5 cents per flower. A grand thing for the grower and the retailer as then in demand, even if bulbs were expensive as compared to now.

New varieties of carnations had a longer run than now, but no talk of sleepiness. President De Gray, Lady Emma, La Purite, A-storia, etc., followed by Hinz's white and red, Hinsdale, King of the Crimson, and others, all originated as late as 1876 and 1877 and had barely got a foothold in the trade twenty years ago. All sold up to 1880 there were raised and named seven in whites, eight in reds, seven in pinks, six yellow, and four white variegated, two maroons and one red striped. The next decade, 1880 to 1890, there was brought onto the market upwards of 125 new sorts. Beginning, however, in 1884 the coming carnation tide may be said to have had its origin, with thirty-two new sorts; 1885 dropped to eighty only; 1886 ran up to 37; the two following years 16 and 18 respectively, out of the total for the decade of 132 sorts. After 1890 new sorts fairly rolled in; 1892, the banner year, is credited with 57 sorts, and still it goes on; many are called, few are chosen; you may your money and try your luck. Hinz's white stayed with us until a very few years ago, and good

Peter Weiland.

old Portia, a product of 1884, is still in the ring.

C. W. Ward, you know, recently estimated that the florists in this country grow, altogether, 5,000,000 carnation plants each year, producing 60,000,000 blooms a year, that sell for \$2,000,000. It may be in this city we have two growers alone that housed 240,000 carnation plants between them. Think of it! Whatever the number may be and what they bring, the Chicago market gets away with its full share of roses and carnations, and for this time we will end and let it go at that.

PETER WEILAND.

We present herewith a portrait of Peter Weiland, who at the age of only 23 years will superintend the construction and later have full charge of a large modern range of glass at New Castle, Ind., for the growing of cut flowers for the Chicago market.

The new plant will be owned jointly by Mr. Peter Reinberg, the well-known Chicago florist, and the young man whose portrait appears with this. It will consist at the start of ten connected houses, each 27½x300 feet, with the Garland iron gutter and iron post construction. Of these four houses will be devoted to roses, five to carnations and one to asparagus. The material has been purchased and construction will begin as soon as frost is out of the ground.

Peter Weiland is the son of M. Weiland, Evanston, Ill., and for the last four years has had charge of his father's extensive range of glass. He has been remarkably successful, especially with carnations and bulbous flowers, and though so young has already established an enviable reputation as a grower. Of course he will have the benefit of the advice and experience of Mr. Peter Reinberg in a general way, but

in matters of detail he will act entirely upon his own judgment. It is certainly a great responsibility to assume at so early an age, but all who know the young man and the intelligent interest he takes in his profession agree that he is fully equal to it.

LETTUCE FORCING.

[Read before the Tarrytown, N. Y. Horticultural Society, by Wm. Scott.]

Though under ordinary conditions good lettuce can be grown out of doors in summer with very little trouble, when it comes to forcing them during winter it is by no means an easy matter, but one that requires constant vigilance, and even with all the care one can give, does not always prove satisfactory. The trouble can be summed up by saying that lettuce is a plant that does not adapt itself readily to forcing. In the earlier stages of growth little trouble is experienced, provided good, fresh seed has been procured, so that the plants from the start are free and vigorous.

It is when the heading stage is reached that the chief trouble known as leaf-burn or heart-rot, is experienced. This disease is the work of a fungus that attacks the edges of the inner leaves, quickly rotting the affected parts and sadly disfiguring the plants, often to such an extent as to render them useless. Extensive experiments have been carried on for years with a view to finding a preventive or remedy, and although a good deal of light has been thrown on the subject from a scientific point of view, so far as I can learn the preventive or remedy is still to be found. The only practical advice these experimenters have had to offer is to keep the plants in as healthy a condition as possible. That, of course, any gardener worthy of the name, tries to do, no matter what plant he has under cultivation.

There are three lines that suggest themselves to me along which the cultivator must advance to obtain success. The first is to procure a suitable condition of soil; the second, to procure suitable atmospheric conditions, and the third, to procure, as far as possible, a fungus-resisting variety.

First, then, let us take the soil, on which must largely depend the healthy condition of our plants. I need not go into the detail of making up a compost heap, as no doubt all the members here know how that is done. The sod should be cut, and the compost made up the same as for ordinary potting purposes, only for lettuce it should not be too rich, and I prefer to omit bone and any chemical fertilizers, and use only that from the barn yard.

I have to grow my lettuce in benches, but if I had my choice would certainly prefer solid beds, and if possible have them right down on the ground level, as here they have a much more natural condition of soil and a much more equable condition of moisture can be obtained at the roots. But where only benches are available for their growth, we must make the best of it.

I find it always better to keep them on the dry side, as I find this a preventive of another disease, known as stem-rot. This I have found to develop most readily after a watering before which the soil had been allowed to become too dry.

In filling the benches I use for drainage old, well rotted manure in a dry and rather spent condition. Over about an inch of this I put about four inches of the prepared compost, working the roughest parts of it toward the bottom. There is no need of packing it, as it can be firmed sufficiently around the plants at planting.

Now we come to the atmospheric conditions. Artificial heat is undoubtedly the cause of the greater part of the trouble in forcing lettuce. In frames where no artificial heat is used lettuce can be grown well with ordinary care, and are seldom troubled with fungous diseases, but without heat, which must during the winter months be supplied by artificial means, there is little or no growth, hence no forcing, so that we must adopt this necessary evil to attain the end in view. The question, therefore, arises, at what temperature is it most profitable to force lettuce? Or, in other words, what amount of artificial heat can be applied to lettuce to be suitable to its most rapid growth and at the same time be unsuitable to the development of fungous diseases?

My experience leads me to conclude that a temperature of 40 degrees by night with a rise of 15 degrees on bright days is, all things considered, the most practicable. Fresh air should be admitted on all favorable occasions, and the atmosphere should never be allowed to become close and stagnant. The house should have sufficient piping in it to allow of the temperature being kept at the figure given without requiring the pipes to be heated sufficiently to give off a dry, burning heat, which would not only be detrimental to the growth of the plants but an incentive to the development of injurious insects. Besides, having the house thus heated obviates to a great extent the necessity of too frequent sprinkling.

Now as regards variety. I have tried quite a number and the one I find easiest to grow and least subject to disease

is "Grand Rapids," but as this is one of the loose, flabby type, it does not find so much favor as the heading varieties, which the majority of families insist on having. Of this latter class I grow "Deacon" in preference to any other.

This, though somewhat slower than some of the others in maturing, I have found to be the least subject of all the heading varieties to fungous diseases and makes a fine solid head.

In conclusion I would caution growers against allowing the young plants to become crowded and drawn. It is better to handle them in a small state, first from the seed boxes into flats, and again from the flats to their maturing quarters, before there is any danger of crowding.

SWEET POTATO PLANTS.

Could you give us through the columns of the REVIEW a few points on starting sweet potato plants; when and how to start them, and do they need a hotbed or cold frame?

Plant a few tubers in box of sand or light soil in greenhouse or hotbed. They will soon sprout. When three or four inches long take cuttings and insert in sand. They will root as readily as German ivy. When rooted, pot, using 4 inch. Grow in hotbed. When well started put in cool frames ready to plant out middle of May.

It is much better to buy plants from a good seedsmen along in May or early June. They can be bought for 50 or 60 cents per hundred. Make hills of light, rich, sandy soil three or four feet apart and about fifteen inches high. Have part of thick cow manure water; dip roots in and plant on hills. Give good watering. As plants begin to run go through them twice a week and lift up runners to prevent them rooting to the ground (as they root at every joint) or you will not get a crop.

W. L. RAYNER.

CHICAGO.

Club Meeting.

The last meeting of the Florists' Club was a very lively and interesting one. The talk by Mr. Buntner on the retail trade and Mr. Sanders' paper on the trade of twenty years ago will be found elsewhere in this issue.

A communication was received stating that Mr. Benjamin Dutree, of the American Rose Company, Washington, D. C., would be present at the next meeting and would display a vase of blooms of his new rose, White Golden Gate, and would also probably favor the members with a talk on growing the Golden Gate rose, with which he is very successful.

Mr. H. E. Philpott, of Winniepot, Manitoba, was a visitor, and told of the difficulties of the florist in a city where the thermometer stood at 30 degrees below zero when he left and where it had never been higher than 10 degrees below for the past three months. He said that growing roses was simply one of the questions, as during the winter months the frost on the inside of the glass was rarely less than half an inch thick. He obtains most of his roses from Toronto and Brampton, as the duty of 20 per cent makes a heavy addition to the cost of flowers imported from the United

States. He indulged all that had been said by other speakers regarding the importance of attractive window displays, etc. In speaking of shipped flowers, he said that the growers were too apt to let the flowers remain too long on the plants to make them good long distance shippers and that they should be cut earlier for this purpose.

Mr. James Hartshorne, of the Chicago Carnation Company, showed a vase of blooms of the new carnation, Mrs. J. J. Mitchell, a cross between Red Brad and Jubilee. It has the size and form of Brad, the color of Portia and is very fragrant. It is a beautiful carnation. G. E. Anderson was elected to membership.

The Market.

The latter cold weather has checked local demand and while there is no material change in prices of the first grades, there is a wider range and prices are really easier. On tea roses the range is now \$4 to \$8, with not very many sales at the top figure, \$6 probably representing the rate at which the bulk of the good stock is sold and the poorest qualities finding difficulty in winning the lower figure mentioned. American Beauties still bring \$5 a dozen for the best, but they grade down rather sharply and the poorest go as low as \$6 a hundred. Liberty is getting to be more of a factor and sells at from \$6 to \$10.

In carnations the range is from \$1.50 to \$3 for good ordinaries, with a few fancies, such as Lawson, etc., going as high as \$4 and an occasional sale of very poor stock at as low as \$1. Violets still move poorly. For good stock the price ranges from 40 cents to \$1 a hundred, only a very few bringing the top price and poor ones being often cleaned up at any bid made by the buyer, some sales hardly realizing enough to pay for the picking and bunching. Bulbous flowers are also suffering. The rates quoted on tulips are \$2 to \$5, but the sales at the latter figure are very few and the bulk go at the lower rate if at all. Daffodils move very slowly, too, and more are sold at \$1 to \$2 than at a higher figure.

Among the tulips coming in the highly colored La Reines from Klehm's nursery are very noticeable at Kennicott Bros. Co. We have seen these used in plateaus for table decorations, making a better effect than roses and they were some little cheaper, too.

The best hardy ferns are up to \$2 a thousand. Good smilax seems scarce and sells at \$2 a dozen.

Various Items.

Last Monday evening a large number of friends attended a surprise party at Mr. George Reinberg's, Summerdale, and were unexpectedly joined by Mr. John Bek, of Remsen, Iowa, a cousin. The affair was a decided success and the evening was a most enjoyable one. Among florists present in addition to the host of the evening were Henry Wietor, N. J. Wietor, Adam Zender, Peter Reinberg, and John Muro.

Mr. and Mrs. O. P. Bassett, returned last Monday evening from Florida and on Tuesday Mr. and Mrs. C. L. Washburn left for South Carolina.

As is noted elsewhere in this issue, Messrs. Peter Reinberg and Peter Weiland have concluded the purchase of land in New Castle, Ind., and material has

already been shipped for the construction of the new range of glass to be erected there. Mr. Weiland is on the ground to superintend operations.

New Castle has also been definitely selected as the site for the new range of glass to be erected by Mr. L. Coatsworth, of Bantley & Co., mentioned last week. Eight acres of land have been purchased and building will begin to day.

New Castle is getting to be an important point floriculturally. A party of Chicago florists will journey there this week, taking the 8:40 p. m. Panhandle train this Thursday evening, to attend the meeting of the Indiana florists, and incidentally look over the existing and prospective establishments.

The bowlers will play a series of league games this Thursday evening at Anson's.

Mr. J. W. Canaga, of St. Louis, was a visitor this week.

BOSTON.

Trade Conditions.

The last week of February read like a "yellow-covered novel," a "dull thud" and "sickening gloom" on every page, together with "blood-curdling groan" in each chapter as some poor grower closed out his stock at a ruinous price.

The weather was too cold to allow the street-trade to do much business until the closing day, and the sun now runs high enough to bring out lots of material. Violets and yellow jonquils have been the most plentiful, quantities and quantities of the former being left on the plants for lack of trade. Single ones were even more plentiful than double. Roses of all kinds are not now so plentiful as they have been, but there are too many of them yet, and the size and quality never was equalled in the history of the business.

Carnations are getting quite familiar once more and prices are now easy, say from one to three cents, with a few fancy ones. Ordinary roses range from two to twenty cents, Meteors and a few Liberty from three to twelve and a half, Beauties from eight to seventy-five each. The scarcity in fine white flowers for toning up designs still continues, and the supply of good green material is limited.

Various Notes.

Much serious sickness prevails among the blossom men. Pres. W. C. Stiekel, of the Park street market, strained his back, slightly, as at first supposed, but it is proving to be a tedious affair, being painful and interfering with movement of the legs.

Wm. Anderson has been laid up now for a couple of weeks with a scalded leg.

B. L. Clark, Jr., of Randolph's, has been quite sick with typhoid fever, as has also Mr. Hirsch, the Temple place retailer, and Silas Grabelle, of J. W. Howard's Charleston branch, is confined by a very painful combination of diseases. The gripe is still quite active, but not so vicious as formerly.

Out on the B. & A.

Having noticed two shining spots on the hills twenty miles away to the westward, I gathered up the remains of my personality and half a day's worth of spare moments I had been saving up during the past busy weeks and trained out there to see what they were. Simply the

glass roots that cover the almost phenomenal results obtained this season by rose grower Robert Montgomery and rose grower W. S. Wilson, under the tutelage of William Morrice. Imagine an immense triangle of about two miles' measurement on each of its three sides laid out on the beautifully diversified face of nature near Wellesley College, and you can picture these two places on the two northerly corners, with the gigantic establishment of the E. M. Woods Co. on the remaining corner to the southward. Mr. Wilson's place is in a secluded dell (not Dell Cartwright) of Wellesley, the other two being in Natick, and all of them are most easily reached from the railroad stations of their own respective towns.

The two of which I especially speak have attracted my attention from the fact that I have seen practically their whole output this winter and have been told that they are about the only ones that have not managed to get badly out of order at some time since last September. They are the only houses I have ever visited containing grafted stock from one to three years old, and perhaps it is unfair for me to be obliged to compare them with my old ideas of own-root or one-year grafts. Both of them are simply canebreaks of bushes shoulder and head high, with almost every bush and stem in perfect condition, even though enough material has been sent to Boston to furnish a New England farmer's wood pile. I almost dare to guess nothing better in their line never existed. Each is distinctly off crop now as much as they ever are, but a first-class old house of grafted stock does not produce its product so much in crops as roses formerly did. Both are up-to-date examples of modern commercial science in their appointments. Mr. Montgomery's being absolutely new throughout, including dwelling house and stable. His place consequently shows latest results without the accumulations of years of experiment. A very interesting feature which also throws a side-light upon the owner's nature is a big bird cage, about 10x 8x6 feet, containing about a dozen tropical birds of different kinds, and the happiest appearing lot of captives I ever saw. Too, the attention he gets from his "chief root inspector," the cat, his two dogs and two horses, adds an idea each in its way. Another feature is that his whole establishment of fifteen acres is so situated as to command a magnificent view of twenty miles in half a dozen different directions, and he has displayed much taste in house surroundings.

Mr. Wilson's place is one-third larger than the other now, and he is, at 60 times, knitting away at a new house 320 feet long, half its length being now almost done.

The whole is distinctly a model, except one or two very small old houses, soon to be torn away and replaced.

J. S. MAXTER.

SAN FRANCISCO.

The Market.

This week has been a wet and sloppy one and it still rains. Walking skirts have taken possession of the feminine mind and the thought of flowers seems to have vanished for the time being. Business has been very dull this week; transient trade seems to be at a stand-

still. A few funeral orators are coming in, merely keeping us moving. Violets are very plentiful and are in great demand. Tulips and Dutch hyacinths are to be seen this week, but in quality they are not first-class, having very short stems.

Various Items.

Mr. Arnold Ringier, representing W. W. Barnard & Co., Chicago, is in town this week.

Mr. John Campiana, Alheda, Alameda Co., Cal., has just completed one carnation house 30x86 and one fern house 20x50. Mr. Campiana is a son from sunny Italy and can perhaps claim the distinction of being the smallest florist in America; his height being only three feet. His wife is of average size; also his oldest son, but the two younger sons are dwarf like himself.

A. Galloxy, Fruitvale, is cutting some splendid Marquis and Lawson carnations.

Mr. T. Stevenson, the London florist, is recovering from an attack of la grippe, having been confined to his bed for four days. When Mr. Stevenson was first taken sick he was swamped with advice on how to get well. Customer, No. 1 (stout old lady)—"I am sorry, but you take a wine-glassful of brandy and olive oil every two hours." Friend, No. 2—"My dear fellow, you look bad, but just go to bed and stay there until well and then get up." Deadhead, No. 3 (a drummer)—"My, old boy! you look feverish, drink all the whiskey you can get hold of." Customer, No. 4—"I am sorry to hear that you are sick, but just have your wife rub you well with alcohol." Grower, No. 5 (no relation to Mrs. Nation)—"Get some brandy and take a glass every hour—don't remain on your feet." Customer, No. 6 (kind old lady from the land of heather)—"Ye dianna look well, Maister Stevenson, you just gang ta bed an' a'll telephone for the doctor." Mr. Stevenson took a note of each cure as he got it, and, there being no two cures-alike, it makes him slender every time he looks at that note-book. The advice from No. 6 was the only advice taken.

Morse & Nelson, Piedmont, are cutting, from benches, some of the finest freecias coming into market.

Bennett Bros., Alden, are marketing a nice lot of perfect, ripe tomatoes of fine flavor, but the price offered for them at the best hotels is so small that they will not be grown another year.

Mr. Charles Kruee, owner of the Piedmont Nursery, Alameda Co., Cal., is reported to have died at Forty Miles Camp, Klondike, some time in August, 1900. He's mother resides in Germany.

Peter Nicholson, San Lorenzo, is the grower of the finest Bridesmaids coming into market; Pelicano & Co. are getting them.

Peter Wadlinger, Golden Gate, has received from Switzerland a box of carnations, twelve in number, that are said to be very fine. Four out of the lot have died, but the remaining ones are doing nicely and will be watched with interest.

Mr. Robert Armstrong, Fernwood, has a very fine batch of primulas now in full bloom. They are a new strain recommended by Mr. Peter Barr during his visit to California. They are grand in color and giants in size, the best I have ever seen.

Mr. E. Carlson was afflicted from the Klondike not with influenza, with whiskers, as he has not had a shave for one year. Mr. Carlson's eyes were good in that region, but contacts are very scarce. At first when he got wet, and this he did many times, he tried to hang his clothing up to dry, but found next morning they were as wet as the night before, so he took advice from the old miners and went to bed in his wet clothing, drying them in that way. That is the style up there. J. N.

ST. LOUIS.

The Market.

Trade in general has been only moderately good during the past week. Stock of all kind is plentiful and prices low. Business in the downtown district is much better just now than in the West End, where little, if any transient trade is done. There were plenty of weddings and parties in the West End just before Lent, but now all trade from this source is cut off.

Prices on stock at this writing are as follows: Meteors, Brides, Maids, and Golden Gates run from \$4 to \$6; Perles and Woottons from \$3 to \$4 per 100; of these the stock is quite plentiful and of good quality. Beauties are still scarce and only the first quality are in demand at \$3 and \$4 per doz. Quite a number of short-stemmed ones are coming in, but they sell at about the same price as their roses.

Carnations, too, are plentiful and of good quality. Good long-stemmed stock is offered at \$1, and fancy at from \$1.50 to \$2. While nearly all varieties sell well, white has the call.

Violets have taken a decided tumble. A few good lots still bring 35 cents per 100, but the bulk sell for 20 cents, or \$1.50 per 1,000. The growers of Kirkwood are still picking some very fine blooms.

Bulk stock is a great glut and prices are down to almost nothing; tulips are fine; so are valley, hyacinths and daffs. Harrisii and callas are becoming more plentiful each day. Prices on this stock can hardly be quoted, as you can buy them at about your own price.

Various Items.

From present prospects quite a number of new greenhouses will be put up this coming summer. Several of our growers have already made preparations for extensive additions and alterations to their respective plants.

Mr. Nelson, one of the horticultural commission to the Pan-American Exposition, is in St. Louis completing arrangements for the Missouri horticultural exhibit. He was here a few days ago and examined over 150 barrels of Missouri Ben Davis apples, now in cold storage, and which he pronounced to be in most excellent condition. Mr. Nelson said: "We have in Buffalo 200 barrels and in St. Louis 152 barrels of Ben Davis apples. They are the pick of over 17,000 barrels which my sons and I grew near our home in Lebanon. The apples run about 250 to a barrel, while the average commercial apples run about 350 to 400. About April 15 the apples will be unpacked, unwrapped and sorted for specks. When repacked, they will be sent to Buffalo, where they will go into cold storage on the grounds.

WATER LILIES

We are Headquarters for Water Lilies and Aquatic Plants of All Kinds

Intending planters will gain a good start and early blooms by procuring dormant tubers of the tender Nymphaea as now available. These seedlings start growing rapidly for planting at proper season and also save the expense of buyers' express charges. We shall be pleased to furnish estimates and other practical suggestions to those intending planting either large or small ponds.

SOW NOW seeds of Victorias, Nelumbiums and Nymphaeas.

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA.

THE FLORISTS' MANUAL, A Reference Book for Commercial Florists

THRIPS.

In reading Mr. E. Buettner's interesting talk on migno-nette, published on page 382 of The Review of Feb. 21, I see he is anxious to learn of a remedy for thrips, and I have heard of many other growers who complained about the ravages of this pest.

I have found Gishurst compound an effective remedy and suggest that this be employed. It is an old English insecticide and it can be had from any of the large seedsmen or supply dealers.

A few years ago I had a bench of chrysanthemums that were brown with thrips in July. I used Gishurst compound as per directions on the package, syringing up one side and down the same, giving only one application, and the growth from that time on was clean and strong and all that could be desired. If it is so effective on chrysanthemums it will surely kill the thrips on migno-nette, especially if applied before the latter is in bloom.

Thrips are also very annoying on roses, as most growers well know, and especially on carried-over stock. The insects work down into the buds and it is very difficult to eradicate them. Were Gishurst compound applied at the pruning season I think the plants would be very little troubled by the pest afterwards. Some growers claim that fumigating strongly with tobacco stems is very effective. I have not found it so, but Gishurst compound makes clean work.

W. K.

ABURNDALE, MASS.—F. W. Fletcher & Co. succeeded to the business of the firm of Freeman & Fletcher, Jan. 1 last.

MUNCIE, IND.—George F. Miller, the florist, died Feb. 8 of consumption, aged 43 years. He was at one time in the employ of florists in Louisville, Ky., and was later with A. Wiegand, Indianapolis, Ind. In 1876 he came to Muncie and in 1883 started in business for himself, which he continued till the time of his death. He leaves a widow and five children, and a host of friends. Mrs. Miller will continue the business and has engaged Mr. C. C. Clark to look after it.

SPOKANE, WASH.—E. J. Webster, president of the Fairmount Cemetery Co., is planning to erect a greenhouse in the cemetery.

MINNEAPOLIS, MINN.—J. P. Stockdale, the florist, died at his home in this city Feb. 20, aged 56 years. He had been in poor health for the past ten years.

GIBSON CITY, ILL.—The Swan Peterson Floral Co. has been incorporated with a capital stock of \$30,000. Mr. Swan Peterson holds one-third of the capital stock.

BOWLING GREEN, OHIO.—James Marshall has leased his greenhouse to Mrs. Geo. Mercer for a term of three years.

DENVER, COLO.

Lent has made little difference in business, and the past week it has been quite good. With beautiful weather, flowers have come in pretty fast, particularly carnations and violets.

Plenty of bulbous stock is seen, and of good quality, which meets with fair demand. Good pans of tulips and daffs sell readily. The market is well stocked with good flowering plants and the demand for them is quite satisfactory. I noticed yesterday a fine lot of the true shamrock being grown by the Park Floral Company. They are in 3-inch pots and they are fine little plants, which should prove quite the thing on St. Patrick's day. They were grown by a German and though he hates the Irish, he was true to his dear little shamrock and has them to perfection. But Ben does other stuff equally as well and a look over the place shows some good gardening.

Mr. Valentine is very much better and able to take a short drive occasionally. We expect to see him about as usual in a few days. **ROCKY.**

THE CROCUS.

Little crocus, well, I swear!
Thought that you
Weren't nearly due
But you are a-smilin' there

Little crocus, well, I swear!
Thought you'd froze,
Most all your toes.
Say, but you are lookin' fair.

Little crocus, well, I swear!
Who'd thought you,
All pert an' blue,
Would come out an' take 'th' air

Little crocus, well, I swear!
Hain't you bold,
In all this cold,
Goodness my! what flowers dat!

— ROBERT V. CARR.

Little fool crocus, keep under the beather; You don't know the way of Cook county weather.

Or come out with a muffler, ear-rings and a sweater,
And wait until 'boston time, yos, you had better.

— CHICAGOAN.

WATER PRESSURE.

Replying to "Subscriber," the water pressure will depend entirely upon the height of the tank, which will of course govern the height of the connecting pipe. This last should be fully as large as the main that leads into the houses, but it is of no benefit to have it any larger.

M.

DALLEDOUZE BROS., Flatbush, N. Y.

Mention The Review when you order.

COLUMBUS, OHIO.

Trade has been very brisk for the past month with plenty of funeral work. Bulbous stock coming on more plentiful.

Mr. S. F. Stephens' houses were a ray of beauty the past two weeks.

The houses of E. L. Charles, which show up well from the street, were very attractive last week.

Mr. Courcy has everything looking fine, with prospects good for Easter.

The la gripper has been playing havoc among the florists; the ones caught by it are: Mr. Ray, Mr. Gus Drobish, Mr. M. Evans, Mr. Davis, Mrs. E. L. Charles and daughters and Mrs. S. F. Stephens.

C. A. Roth, who conducts a cut flower store at the corner of High and Broad streets, was arrested last Saturday morning on a warrant sworn to by O. D. Tatje, charging assault on his son. The assault is alleged to have occurred Friday evening, when young Tatje stopped on the above corner to transfer from one car to another, when Roth came out and rudely ordered him off the corner, pointing to a sign "No loading here," which is posted in his window. He even went so far as to push him into the gutter. Roth was brought before the justice and his bond was fixed at \$50 for his appearance March 6. G. E. A.

CHESTNUT HILL, PA.

Tuesday evening, March 12th, will be carnation night at the Chestnut Hill Horticultural Society. At that time we expect a good exhibit and a paper will be read by Mr. Win. Kleinhertz, gardener to P. A. B. Widener. Mr. Kleinhertz is the most successful carnation grower in this section, and the fact that he is to present this paper will undoubtedly secure a large attendance.

J. HOWES HEMPHREYS.

A GOOD DRUMMER.

Mr. C. Lawtzen, Rhinebeck, N. Y., writes under date of March 4: "Please drop my advertisement, as I have no more plants at present. The Review is a good drummer. It sells plants quicker than any other trade paper we have in the country. You will hear from me again soon."

CORRY, PA.—Last summer Mrs. S. L. Stebbins built a house for roses and carnations, size 20x100. She reports trade good. One florist, Miss Rhodes, has retired from business and the greenhouses have been torn down.

WASHINGTON, D. C.—Mr. O. A. C. Oehmker, formerly of New York, has opened a floral store at 821 Fourteenth St., N. W., this city.

We Root 10,000 Carnation Cuttings a Week.

SEE OUR LOW PRICES ON SMALL LOTS.

Olympia	3.00 40.00
Mrs. G. M. Bradt	2.00 25.00
Edith Crocker	2.00 25.00

RUSSELL. Again this has proved the most prolific and profitable carnation, giving us so far fully 75 per cent more blooms than Crocker or eight other varieties under same conditions. It never splits its calyx, which Crocker and some others do so badly. After five years' experience with ordinary culture, it proves to be the most profitable and best all-around carnation we ever grew. An large as Scott and of a bush of light rose-pink, it gives us the best rooted cuttings now ready at \$2.00 per 100; \$15.00 per 1,000.

White Crocker, \$3.00 per 100. McGowan Sport, \$1.50 per 100; \$10.00 per 1,000.

CHAS. BLACK, Hightstown, N. J.

PETER REINBERG, 51 Wabash Ave., Chicago, Ill.

Buy your rooted cuttings of carnations from healthy stock. Our plants are free from disease, have been grown out and not forced in the propagating bunch. We offer the following varieties and especially recommend Gen. Gomez. This carnation has proved this year the best crimson yet introduced. It is the Jack of carnations in the New York market; it commands the highest wholesale price.

HARDY PLANTS.

Something new. Octonarius from Italy apple tree from the thousand. It is a beautiful, strong, medium sized tree, fully bearing what Professors Koch, Matthaeus and Linnas call large, acid, most succulent berries. This apple tree is found only in the north-western part of Germany and I was the first to bring it to America. Price, \$2.50 per 100; \$5.00. New kind of prunus, Prunus Pissarini diversifolia, (trifloratus maritima), (red-rose), introduced to me and described by them "as having remarkably very large sterile flowers, three inches in diameter, color a light pink, shaded mauve, and the finest of Hydrangea Hortensia. This variety is most remarkable and distinct in color." It is sure to be a success. We offer strong plants, 4 1/2 in. pots, 75c each; \$7.50 a doz. Also Deutzia Corymbiflora, a very distinct variety; Deutzia gracilis and Deutzia gracilis venusta, the Azalea Deutzia. Send for circular for price of these and other varieties, cash with order, please. John Charlton & Sons, Rochester, N. Y.

2,500 California prairie, 4 1/2 feet high, one cuttings, \$1.00 per 100; \$10.00 per 1000. 2,000 California prairie, 4 1/2 feet high, strong top cuttings, \$1.00 per 100; \$10.00 per 1000. 1000 Euonymus, 1 1/2 in. high, bushy, green, \$1.00 per 100. Arundinaceae, neat and fringed in leaves. Price, \$2.00 per 100; \$20.00 per 1000. J. L. O'Quinn & Co., Raleigh, N. C.

HYDRANGEAS.

A superb new hydrangea, Hydrangea Hortensia Marshall. This is a grand variety, sent out by James Veitch & Sons, London, England, last winter, 1899-1900. It is named after their collector, Mr. Marshall, introduced it and described by them "as having remarkably very large sterile flowers, three inches in diameter, color a light pink, shaded mauve, and the finest of Hydrangea Hortensia. This variety is most remarkable and distinct in color." It is sure to be a success. We offer strong plants, 4 1/2 in. pots, 75c each; \$7.50 a doz. Also Deutzia Corymbiflora, a very distinct variety; Deutzia gracilis and Deutzia gracilis venusta, the Azalea Deutzia. Send for circular for price of these and other varieties, cash with order, please. John Charlton & Sons, Rochester, N. Y.

IVIES.

English Ivy in 2 1/2, 3 and 4-in. pots, fine, strong plants. For prices write Geo. A. Kuhl, Berlin, N. Y.

The Florists' Manual, by William Scott, is a whole library on Commercial Floriculture. Send in your order now. Florists' Pub. Co., Chicago.

SEEDS.

Burpee's Earliest of All is the Sweet Pea for the florist. Notwithstanding their dwarf habit and neat slender foliage, the plants are of vigorous growth and come into bloom always 10 days to two weeks in advance of the Extra Early Blanche Ferry, which has been heretofore a week ahead of all other varieties. The buds are as large as those of the regular strains of Blanche Ferry, and have long stout stems, making them entirely satisfactory for cutting; they are long and slender, and come in three, all facing one way. The standards are a bright, rich pink, while the wings are nearly pure white. Burpee's "Earliest of All" is not only the earliest to bloom in open ground, but is also the most desirable for forcing under glass for winter cuttings. The dwarf habit of this variety renders it much more easily grown on the benches, admits of closer planting, and from seed sown during the latter part of August blooms may be cut during the holidays, while with the taller varieties no blooms could be had before February or March. Per pkt. 5 cts.; or 6 cts.; 1/4 lb. 20 cts.; by lb. 60 cts.; 5 lbs. or more at 55 cts. per lb. W. ATLEE BURPEE & Co., 43-47 N. 5th St., PHILADELPHIA, PA.

Seeds of the genuine three-colored fruit-bearing SOLANUM CAPSICIFOLIUM ANCESTRUM selected from a few of our best plants. Per 100 seeds, 50c. Anton Schultze, College Point, L. I., N. Y.

SYRACUSE, N. Y.

The twelfth annual meeting of the Central New York Horticultural Society was held in the Chamber of Commerce rooms, Friday evening, February 22. The meeting was one of unusual interest. After an entertainment, which consisted of readings by Mrs. R. D. Jillson, elocutionist, and several very fine numbers on the graphophone, the business part of the meeting was taken up, at which time the officers for the ensuing year were elected as follows: President, S. T. Betts; vice-presidents, Rev. Wm. A. Beauchamp, A. D. Perry, E. A. Powell, J. Wm. Smith, A. C. Chase; secretary, N. H. Chapman; treasurer, David Campbell. Executive committee, S. W. Rose, C. A. Fox, Geo. Han, Peter Kay, F. H. Ebeling, and John T. Roberts.

President Betts, in his talk to the society during the evening, among other things, suggested the advisability of the society giving another series of lectures, one each to take place in March, April and May. It was also proposed to hold a rose show on the 6th and 7th of June

next, at which time those who grow roses could be invited to participate in the competition for prizes to be offered by the society. A great deal of interest was manifested in the plans for this exhibition. The society also took action to send delegates to the second annual exhibition of the American Rose Society, which is to be held at the Waldorf-Astoria, in New York City, March 19, 20, and 21st. President Betts and Treasurer David Campbell were elected as delegates and A. C. Chase and J. Wm. Smith as alternates to represent the society at the rose show on that occasion.

The proposition was also presented at the meeting to hold a chrysanthemum show on the 12th, 13th and 14th of November next. The matter was not fully decided, but the plans may be perfected whereby the exhibition, under the auspices of the society, may occur on the above dates. The Central New York Horticultural Society has done a good work in this community for a number of years and has encouraged a large interest along the line of horticulture and floriculture.

N. H. C.

MILWAUKEE.

Articles of incorporation of the C. C. Pollwork Co., were filed March 5 with C. C. Pollwork, Jos. E. Pollwork and W. A. Kennedy as incorporators. The capital stock is placed at \$25,000 and the business is to grow and sell palms, plants, cut flowers and general supplies for the trade. Mr. Kennedy will assume the management of the palm and greenhouse department at formerly conducted by C. C. Pollwork.

YOU WOULD FIND a copy of the Florists' Manual, by Wm. Scott, especially valuable during the next few months. It tells you all about handling bedding plants to the best advantage at the least expense. The book will save you many times its cost during that period.

GLASS.

We happened to get a lot of 14-inch and 16-inch wide greenhouse glass on hand which we are selling below present prices.

HAMMOND'S SLUG SHOT.

1901

Destroys Pests which prey upon Vegetation in the GREENHOUSE. CONSERVATORY or GARDEN.

SLUG SHOT is a composite powder not dependent solely upon any one of its parts for effectiveness. For 21 years **SLUG SHOT** has been used, doing effective work against Leaf Eaters, Juice Suckers, Sow Bugs, Snails or Grubs in the soil. **SLUG SHOT** is spread by duster or blower. Water will carry it through a sprayer or pump. It destroys in this way elm tree beetles, caterpillars on trees. Where Snails or Sow Bugs are troublesome, dust **SLUG SHOT** on the soil with a duster. **SLUG SHOT** kills fleas, calves and dogs of lice and fleas. **SLUG SHOT** is put up in tin perforated screw-top canisters and cartons holding one lb. The 5-lb. package (see cut) retails at 25 or 30c each, larger packages at less rate. **SLUG SHOT** is

Sold by the Seedsmen in all parts of the United States and Canada.

If you have a Lawn

You will want a **FINLEY ROTARY LAWN RAKE** this spring and you ought to have it early. It will not only save lots of work but it will do it better than it can possibly be done by hand. It will enable you to clean your lawn easily and effectively in the spring and to keep it clean all summer. It will enable you to kill out crab grass and other pests. It takes up grass, either long or short, twigs and loose litter of any kind, stones included, that a hand rake would not touch. It will save its cost in sixty days on any good lawn.

The Finley Rotary Lawn Rake in operation.

Price \$12.00. IT WAS GIVEN A CERTIFICATE OF MERIT by the Society of American Florists at the New York Convention, the judges reporting that they "Believe it to be far superior to anything else in the market."

Send for Illustrated Circular.

**MR. WM. MUNRO, ONE OF THE JUDGES
APPOINTED BY THE PHILADELPHIA FLORIST CLUB TO JUDGE
OUR GRAND NEW ROSE**

Queen of Edgely

PINK AMERICAN BEAUTY,

Writes—December 31, 1900, as follows:—

"Having had the pleasure of visiting your greenhouses and seeing—for the first time—your new rose 'Queen of Edgely' growing on the plants, I should like to say that my first impression as regards its sterling worth has been greatly strengthened. At the time of my visit it was a slight worth going a long way to see, having stems 6 to 8 feet long. With its luxuriant foliage, exquisite color and fragrance, large size of bloom, together with its free budding qualities, I consider it a grand introduction and a money maker for all growers of American Beauty Roses."

Lansdowne, Pa.

Truly yours, WM. MUNRO.

ROSES

GRAFTED ROSES.

It seems to have become a settled fact in the minds of most rose growers that grafted plants are superior to own root stock, no matter whether grown on raised benches or solid beds. There is, however, a difference of opinion as to whether it is the most profitable to grow them on raised benches or solid beds. We grow them under both conditions and so far the bench plants far exceed those in solid beds in quantity but not in quality. This is our first year's experience, though, and we expect the solid beds will make up lost time when the hot weather comes.

We would like to have the opinion of some of the Review's readers as to the comparative value of beds and benches for grafted stock and the best depth for same. If it is practicable to carry bench grafted stock over from year to year the same as when in solid beds the benches would in my opinion be most profitable, as grafted means a lot of work and expense.

No doubt those growers who have had grafted stock both on benches and in solid beds will favor us with the conclusions formed from their experience, and their method of treatment. We are now grafting and planning for another season, and no doubt others are doing the same, so a full discussion at this time would be helpful to many.

NORTHWEST.

Some growers put up a strong argument in favor of own root stock but apparently grafted stock is working its way to the front. Year by year more of it is planted and I notice that wherever it has been introduced it stays, whether on benches or in solid beds. With us our grafted stock is far ahead of that on own roots. Of late the own root plants have gained so as to come up close to the grafted ones owing to very strong and vigorous growth from the bottom, but up to this time the grafted plants were much superior.

We started to propagate about the middle of December and potted the Manetti stocks Christmas week. At present we have both grafted and own root plants in 3-inch pots and the grafted plants are three times the size of own root ones. In a month or two more the difference will be still greater.

The question, raised by "Northwest" is well worthy of the fullest consideration by every grower, and it would certainly be of great value and benefit to all if those who have had experience in the matter would communicate it through the Review.

My own opinion is that solid beds are the most profitable providing they are properly handled. Even if they produce a few less flowers the difference in the expense will more than offset it. However, I would not advise anyone to change from the bench system to solid beds without first giving it a trial for a year or two on a small scale. Though the culture is apparently much the same there are some little details which must

be fully understood. If from some cause the roses in solid beds receive a severe check in the fall it is very difficult to get them into good condition again before spring, and the resulting loss would of course be considerable.

My experience with grafted stock has been that it is best for both benches and solid beds, the last in particular. I do not, however, wish to say that own root stock cannot be made to equal it. Grafted stock starts off quicker but with good care own root stock will have been just as profitable at the end of the year. The principal advantage of the grafted stock is the more robust constitution. Eel-worms in particular will not affect them as much as the own root plants and they are not so susceptible to disease or injury from mistreatment. Again they undoubtedly bring far the best flowers during the first part of the rose season.

As to carrying over grafted plants on raised benches the same as in solid beds I do not think it advisable. I have never tried this plan but I can not see how it would be possible to carry over this stock from year to year in only four to five inches of soil without exhausting its strength to such a degree as to render it worthless. Yet I believe that if the plants were lifted and replanted in fresh soil they could be used for a number of years. I have never carried either grafted or own root plants over for more than two years, not because they did not look strong and healthy or it was not considered advisable, but it has happened that we either planted them in solid beds or made use of them otherwise.

M. SPATCH.

I have never had any experience of account in my own practice with grafted stock in solid beds, hence am not qualified to reply to the question. I have watched with much interest the use of grafted roses and have not yet become a thorough convert, perhaps I may change my mind after more experience. As it was first recommended as a sovereign preventive of Eel-worm, and I had no use for grafted plants for that purpose, did not give the subject attention until within a year or so, since it has been claimed that by the use of these we may be able to grow much finer blooms. True it is that some growers, notably Mr. Montgomery, of Natick, have produced wonderful blooms on grafted Brides and Maids in solid beds. These I have seen and know. I also hear that Mr. Pierson, of Cromwell, Conn., uses grafted stock in solid beds, and while I have not seen the plants, can vouch for the quality of the product. Now, outside of these two places it does not appear that grafted stock has made such a vast improvement over own roots and it may be that the grower had something to do with it.

Where I have used grafted stock on benches, I fail to see the great advantage, and as I said am not competent to advise.

BENJ. DOBRANCE.

Regarding grafted stock our experience with both solid beds and plants on

benches has been about the same as to look on own roots. Beds give best quality and benches the quantity.

With us the grafted stock has been no better than that on own roots except to make a little larger plant for the first three or four months. After this time there is no difference in plants or flow-ers.

Geo. M. Kellogg.

I have never grown any roses in solid beds and my experience with grafted plants was that they were no better than those on own roots.

Joseph Hancock.

YELLOW ROSE FOLIAGE.

We would like to know what causes light green or yellowish foliage on our roses. They are healthy looking otherwise, having large, perfect buds, very strong, thick stems from one to two feet long. The foliage has turned in the last month. The house runs north and south on one east and west.

E. C.

The question is a very broad one. Yellow foliage may result from very different causes. E. C. does not say what treatment his roses have received, but if they are otherwise vigorous and the foliage has turned yellow only during the last month it is apparent that they have been either overfed or overwatered. Long spells of cloudy weather are apt to turn the foliage light green, especially if ventilation is not properly attended to.

M. SPATCH.

AMERICAN ROSE SOCIETY.

The annual exhibition of the American Rose Society will be held in the Waldorf-Astoria Hotel, New York City, next Tuesday, Wednesday and Thursday. The list of premiums is remarkably long and valuable, and there will no doubt be a lively competition. In addition to a host of exceedingly liberal cash prizes, so arranged that growers having moderate-sized establishments can compete one with another without being pitted against the big fellows, as well as classes for the latter, there is a great number of valuable cups. Cups valued at \$100 are common, and one (that offered by the Lord & Burnham Co.) is valued at \$250. It is certainly a remarkably generous prize list and should bring out a memorable display.

Full details, including copies of the premium list and a plan of the exhibition hall, may be had by addressing the secretary, Mr. Leonard Barron, 136 Liberty street, New York.

CARNATION NOTES.

Potting Young Plants.

By this time the young plants of many of the new varieties have reached you and, so far, all we have seen are in good healthy condition and with proper care will show what is in them the coming season. This is as it should be, for when you pay a good price for a plant or cutting you have a right to expect a good plant for your money. There will be enough varieties that will not do well with you and the sooner you find them out the better it will be, so you can discard them. One does not like to discard a variety without having given it a fair trial, but that is hardly possible unless you have good stock to begin with, and in good time, to make strong plants by

the plants, a good many of them, to the fields. Strongly recommend that the new variety be grown in pots, and, if possible, they can be cut and sold in bunches. It is possible that they will not stand in the open, but by the time the 10,000 plants had been planted out, the weather had become so hot, and the soil so dry, that it is likely to have killed 3 or 4 million of the plants, not counting the damage done by insects.

Do not allow your garden to be the better of your neighbor and allow him to do like some growers. Many growers will put up the gutters and pipe them into a warm house where they will make quick growth and as soon as they are large enough they take off most of the plant to make another cutting and they imagine they have twice as much stock as they really paid for. They have twice as many plants, but what kind of plants are they? They are soft and weak and good subjects for every kind of disease the carnation is heir to and none of the plants will be as large in the fall as those that were grown cool and topped properly. Then when the poor mist-treated plants fail to produce as good blooms as these growers expect (and they are

still in the fall) it would then probably be in more evenly.

Mr. Winton, by the way, is not to be looked for at the other meetings, but than White Cloud. He says Hill is all right for fall and spring, but in 1903 winter cloud is the main dependence. It is, however, too late for fall blooming and in spring Hill is superior. A good all-around white is something he would like to get hold of.

A HOUSE OF WHITE CLOUD.

We present herewith an engraving from a photograph of a house of White Cloud carnations at the establishment of Wietor Bros., Chicago. The house is one of the new ones erected last summer and is 30x200. In this range the Garland iron gutter and iron post construction was employed. The gutter and posts may be seen at the left in the picture. The Wietor Bros. have the flow pipe above the benches in their heating system, and consider it quite an advantage. The pipe is suspended by wires from the purlin. All the purlin supports, as well as the iron posts under the gutter are set in cement.

Azalea Croemina. Ten Feet Spread.

AZALEA CROEMINA.

apt to be unreasonable in their expectations, besides they condemn the variety and the man who sold it to them. Better be satisfied with what you paid for and give the plants a chance to show what the variety really is.

A. F. J. BARR.

THE MARQUIS CARNATION.

Speaking of the Marquis, Mr. James Hartshorne, of the Chicago Carnation Company, says that with him it is the next best thing to Lawson and the greatest in its color. But with him it has been a late bloomer. He started to cut in quantity about Dec. 1. It has bloomed continuously ever since, though, and promises well for the rest of the season.

Mr. N. Wietor, of Wietor Bros., Chicago, says that they had a big crop for Thanksgiving and then no more until recently, when it came into crop again. They like it on account of its size and color, but don't like the habit of cropping that it has shown with them. He thinks that if the buds were kept picked

The accompanying engraving is from a photograph of a plant of Azalea Croemina on the grounds of the P. J. Berekman Co., Augusta, Ga.

This plant had a spread of ten feet and a height of five feet. As will be seen from the photograph, the plant was a mass of its light pink flowers. During the blizzard of February, 1898, this Azalea was frozen to the ground, but has since that time made a vigorous growth and promises to give a profusion of flowers the coming spring. This Azalea has been standing in its present position for about twenty-five years, and until 1898 had never been injured by frost. It is, so far as we know, the hardiest of all the Indian azaleas.

It is growing in a very sunny position, but in a rich, loamy soil. The Messrs. Berekman find in their section a rich soil in which there is an abundance of leaf mould to be the most satisfactory for azaleas, and they do best

when partially shaded from the afternoon sun.

SOCIETY OF AMERICAN FLORISTS.

Executive Committee Meeting.

The regular winter session of the executive committee of the Society of American Florists and Ornamental Horticulturalists was held at the Genesee Hotel, Buffalo, N. Y., on March 5 and 6. The following members were present: President Patrick O'Mara, Ex-President E. M. Wood, Vice-President W. F. Keating, Secretary W. Stewart, Treasurer H. B. Beatty, and Messrs. C. W. Ward, J. F. Sullivan, A. B. Carlidge, J. D. Carnody, Alex. Wallace, Emil Baettner, R. Witterstaeter. The reports of secretary, treasurer, department of registration and the legislative and fertilizer committees were presented. The treasurer's report indicated receipts for 1900 of \$2,000.45, the largest on record; disbursements \$2,094.98; leaving a balance in the general fund of \$1,756.02. Additions to the life membership fund during the year, with accrued interest, amounted to \$369.45, making a total in this fund, January 1, of \$954.45.

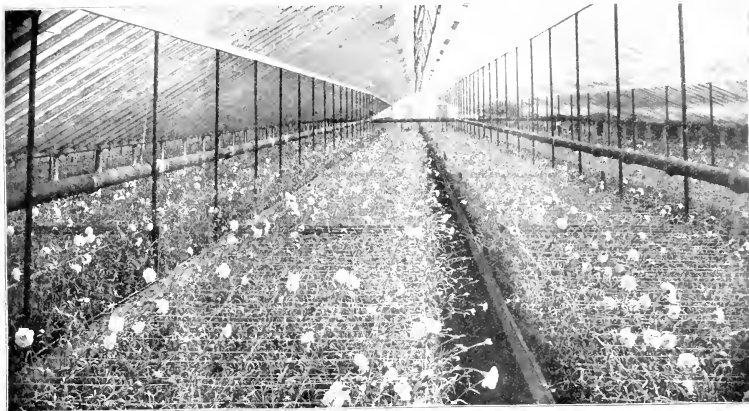

The legislative committee was instructed to watch any proposed legislation regarding fumigation of nursery stock and to advocate the passage of proposed laws establishing parcels post. The legislative committee, as appointed for this year, is composed of Messrs. J. N. May, Robert Craig and Benjamin Dutler.

A telegram from Ex-President William R. Smith of Washington, announcing the passing and signing of the national charter was received with much joy and a congratulatory response was sent.

The relations of the so-called auxiliary societies to the incorporated mother society were then considered. It was the opinion that the best efficiency of the various organizations might be secured with the greatest economy of expense and effort by some manner of federation under the charter of the central body, and in furtherance of this idea a committee consisting of Messrs. Wood, Ward, Beatty, Stewart and Baettner, with President O'Mara, was appointed to consider and advise ways and means whereby closer relations may be established and maintained between the Society of American Florists and the various trade organizations now existent, particularly to establish uniform registration of plants.

It was also decided that in the call for the first meeting of incorporators, the Carnation, Chrysanthemum, Rose and Dahlia Societies be invited to send representatives to participate in the preliminary work of organizing the Society of American Florists under the new charter. Further consideration of the relations of the Society of American Florists with other horticultural bodies throughout the country resulted in the adoption of an order offering one silver and one bronze medal, each to be awarded through ten designated organizations that maintain at least one regular public exhibition annually, the medals to be awarded for new and meritorious plants or flowers of American origin.

Matters connected with the coming convention and routine business of the current year were then taken up. It was decided that the meetings and exhibition should be held at City Convention Hall, Buffalo, N. Y., opening on

A House of White Cloud Carnations at the Establishment of Victor Bros., Chicago.

Tuesday, August 6, 1901, and continuing for five days. The following general arrangement of the program was adopted, subject to such changes as may appear necessary later on:

Tuesday forenoon—Usual opening exercises, reports of officers, etc. Afternoon—Judging trade exhibits and entertainment of visiting ladies. Evening—President's reception and stereopticon lecture.

Wednesday forenoon—Nomination of officers, selection of next meeting place and discussion on the adoption of constitution and by laws under the charter. Afternoon—Shooting tournament and meeting of auxiliary societies. Evening—Stereopticon lecture.

Thursday forenoon—Election of officers and papers upon the following subjects: "Flowering Plants and Their Treatment for Christmas Sales;" "American Beauties for January Cut;" "Results of Second Year System With Tea Roses Under Glass." Evening—A paper on "Steam Heating for Greenhouses," covering the amount of each kind of coal required to evaporate a pound of water and of each kind of coal to produce a horse-power per hour, in establishment of varied specified extent. The paper to be by a scientific expert and followed by a discussion by experienced growers.

Friday—A visit to the Pan-American Exposition as guests of the Buffalo Florists' Club.

Saturday—Bowling tournament.

A reciprocal arrangement regarding the general management of the trade exhibition was made with the Buffalo Florists' Club, similar to that made last year with the New York Florists' Club. The rule admitting plants or flowers free to the trade exhibition, when entered for exhibition purposes only, was abrogated. Otherwise the rules as to space, judging, awards, etc., all remain as before.

The following appointments were made: Botanist, Dr. N. L. Britton; en-

tomologist, Prof. L. O. Howard; vegetable pathologist, Prof. A. F. Wood; superintendent trade exhibition, Mr. Chas. H. Krützsch. Committee on sports, James Frank, William Scott and W. B. Scott, W. R. Smith was added to the committee on permanent home.

The committee on Final Resolutions, consisting of J. D. Carmody, Alex. Wallace and R. Witterstaetter, presented the following, which was adopted:

"The members of the executive committee of the Society of American Florists in meeting assembled, desire to express their thanks to the Buffalo Florists' Club for the magnificent hospitality and many courtesies shown during their stay in this city; also to such of the daily press as have kindly made mention of our sessions in their columns."

WAL. J. STEWART, Secretary.

EMPLOYER AND EMPLOYEE.

From the Employee's Standpoint.

BY HERMAN KROEGER.

(Read before the Detroit Florists' Club.)

You employers know better how to use your men than I can tell you, but I will try to give my ideas as to how an employer should treat his men and how employees should treat their employer. What I am about to say will concern those employees who are in charge of places more than others.

The man who has charge is responsible for almost everything in the place and for the work that is done or that should be done. When an employer engages a man to take charge of his place he naturally makes a number of promises. He agrees to pay the man a certain amount per week or per month, and to do certain other things, according to circumstances. If the employee agrees to these propositions, goes to work and proves himself capable and trustworthy, the employer should make it a point to fulfill his own part of the agreement. Of course, there are exceptions to all rules,

but the rule is that the promises are rarely lived up to.

When an employer agrees to pay his men once a week or once a month, as the case may be, he should see that they are paid at the time stipulated. The men naturally expect to be paid according to agreement. It is hardly fair to expect the other party to the agreement to keep its stipulations when you do not live up to your part. If this part of the agreement is kept it creates a better feeling all around. I have often heard men complain and say: "I will have to leave that man. Instead of paying according to our agreement, I get \$3.00 this week, and \$4.00 or \$5.00 the next week, and as a result I am unable to meet my own bills, and the money don't do me any good."

If that employee had proven himself to be a good man I think it would be money in the employer's pocket to pay him according to agreement, rather than let him go. In this trade good men are just as scarce as good places. Again, if an employee leaves his place because of the failure of the employer to pay according to agreement he will naturally communicate the fact to other employees he happens to know, and as good men do not have to take every place that happens to be open that employer will soon be unable to employ any but men who are undesirable in some way; and changing men often is certainly unwise.

Further, if an employer has a good man or men, he should use considerate and temperate language in talking to them, and the employee should see that he does likewise. I have had quite a few men under me and have always found that they will do more and do it better when considerate language is used, than when cursed at or a big fuss made. If an employer is of the swearing, fussing kind, his employees will generally work only while he is looking at them, and they will be thinking more of the clock than of their work.

An employee should always do for his employer as though he was doing for him-

self. He should have no best interests but advancing his employer's interests. He will find that if position is small as his employer's.

But when a man is thought to take charge of a place he should be given charge and considered the responsible head, and there should be no several men with more or less authority giving contradictory directions. Employers should never take a man away from a job given him by the foreman and set him at something else. If he thinks the other work is more important he should speak to the foreman about it and let all orders to the man come from the foreman. Then there will be no confusion or working at cross purposes. The man would have more respect for both employer and foreman, and there would be a better feeling all around.

And the man in charge should get a little credit for good work done under his supervision. When an employer goes through a house of cards in fine condition, it will be to his own advantage to make some remark expressing satisfaction with it. It will give encouragement to the man in charge and make him feel putting forth further effort. I have heard employers say that if they should do this their foreman's head would get swelled and he would imagine himself to be indispensable, etc. There may be some truth in this description, but I am sure that as a rule a man that has brains enough and skill enough to be a good grower has got intelligence enough to accept a few words of commendation without getting a case of swelled head.

It will pay also to give the foreman a little credit when visitors call. It is too often the case that where things are in good shape the employer takes all the credit, and it is only when he comes to something that is not prospering that he remembers the foreman.

Employers would also find it to their interest to occasionally take their foremen with them when they visit other establishments. It would show good will and generosity and the observations of both talker and together would redound to the employer's benefit. I don't mean that such trips should be frequent. Two or three times a year would be sufficient. We can always learn by looking over the work of others, no matter how much experience we have had.

In this trade we have no standard of wages or of hours, such as they have in other trades. For greenhouse men I think that ten hours should constitute a day's work, especially in the summer time, when the work is hardest. A man who has worked faithfully under glass in the summer will feel almost exhausted when 6 o'clock comes and will sometimes feel too tired to eat his supper. In my opinion, if a man can't do enough for his employer in ten hours he wouldn't be able to satisfy him if he worked twenty hours.

I often hear employers complain of men leaving their employments without notice. It is certainly wrong for an employee to do this. When the man is engaged a certain length of time for notice in case of a desire to terminate the engagement should be agreed to, and this agreement should be kept by both employer and employee.

SEND YOUR order and copy as early as possible for ads. in our special spring number, to be issued March 28.

TORONTO.

The Carnation Show.

The second annual carnation show held by the Gardeners' and Florists' Association and the Horticultural Society combined took place in the Horticultural Pavilion. Some dozen or so of exhibitors not having arrived the show was not quite so extensive as was expected and there was plenty of room for more, but the hall was not a bit too large for the exhibits there were, were first class, new and interesting, there was no dissatisfaction expressed. There is nothing like a free show for bringing out the people, and, though there is no money in it for the societies, there is money in it for the exhibitors. Ergo, if societies provide 8 for holding free shows, whereby exhibitors at said shows make 8 by showing their wares, the said societies deserve the moral and financial support of the said exhibitors, to enable the said societies to provide 8 for holding free shows whereby exhibitors at said shows make 8 by showing their wares.

It is a great treat to the under-aged to visit Toronto during a flower show and to meet under one roof all his old friends in the trade and to find that their friendships is still as warm as ever. Carnation shows seem to be especially fitted for renewing old friendships and making new ones, there is so much material at hand to talk of and compare notes about. However, your space is too valuable to be taken up with moralizing, pleasant occupation though it may be.

I will notice the various exhibits and my own impressions of them as I look them down in my note book at the time. The first was a rose, "White Golden Gate," exhibited by Messrs. Straus & Co., Washington, D. C. It was a grand bunch of 50 magnificent roses with stout, straight stems, but to my mind the flowers are not so well formed as Bude.

Prosperity Carnation (1666) was exhibited by Messrs. Dillenzee Bros., and it was very much disappointed; size is all it has to recommend it. "Bosier Maid" shown by A. Rasmussen, New Albany, Ind., appeared to be a good, useful white as far as one could see; strong stem, good calyx and flower.

Cottage Gardens, Queens, N. Y., sent "Novelty," lemon yellow edged with pink; "Golden Beauty," darker yellow tipped with pink, and Gov. Roosevelt, dark crimson; all appeared to have good points of their own, especially the latter.

R. Wittertactier, Cincinnati, O., sent good bunches of Estelle, Elmora and Opal, which had unfortunately been frozen on the journey. They are, however, well known. Estelle a fine scarlet; I noticed favorably last year. I hear it is very slow of propagation.

Messrs. J. Gammage & Son, London, Ont., sent a very fine exhibit of standard sorts—Joost, Lippincott, Bradi, Olympia, Glacier, E. Crocker, Lucie Band, Mary Wood, Lawson, America, Lord and Rosy Morn, a fine creise pink, also fetching.

F. Dicks, a carnation specialist, also of London, Ont., had a very fine display, Van Horne, a bright pink which appears to be making its mark; Expectant, a strong growing white of good form of Canadian origin; Eldorado, always good with Mr. Dicks; Bradi, and a very fine bunch of Rosy Morn.

R. Jennings of Brampton, sent up some

two Van Horne, Minto, Flora Hill, Crane (very good), Bradi, Jubilee (very good), Daybreak and Marco; also some good Princess violets. W. Fendley, also of Brampton, also put up a very good exhibit of Princess, Farquhar and Imperial violets, and of carnations, Cerise Queen a fine set of if grown inside; Scott, America and Marco. Messrs. W. J. Palmer & Son, Buffalo, sent over truly magnificent bunches of White Cloud, Marquis and Lawson, certainly the best of their kind in the show.

Peter Fishler, Ellis, Mass., sent a very fine bunch of Lawson which made a good impression on the trade; it seems to be the general opinion that Lawson is in it to stay. A. L. Firrell, Randolph, Mass., sent his "Liberty," a good bright salmon color.

J. H. Dunlop, Toronto, put up eighteen fine varieties, all in good shape. Morning Glory, a beautiful variety taking the place of Daybreak, now nearly extinct; Gomez, Marco, Olympia, Bradi, White Cloud, Wards Red (very good and bright), Red Bradi, G. H. Crane, G. Lord, Melba, Mary Wood, Van Horne, E. Crocker, Red Jacket, Marquis and Lawson.

W. Lawrence, Minnie, made a very beautiful display of roses, carnations, magnolias, Lilium longilorum, etc.; his large bunches of select Brides and Maids were grand. H. Sparvins, Mt. Kisco, N. Y., sent "Mrs. James Wood," a pretty, bright scarlet.

J. L. Dillan, Bloomburg, Pa., sent his famous "Queen Louise," which looks as if it might be one of these whites we have all been looking for. The North Toronto Floral Co. put up two grand vases of Bride and Maid roses and had some very good Marquis carnations. F. C. Miller, Brantford, Ont., showed some of his Van Horne and Lady Roberts in fine shape, and another pink named Lord Stratheona, which will be heard from later on.

Chris. Besold, Minnoda, N. Y., sent carried later his "Gothic," a light pink, and Admiral Cervina, variegated yellow. The Floral Exchange, Philadelphia, sent Queen of Edgely, which arrived during the banquet, about 10:30. From a distant city were present along with some of the pink roses, a very taking color by artificial light.

The judges appointed to report on the various exhibits were Messrs. W. Mott, Philadelphia, and B. Myers, Buffalo. They were workers from the world go and conscientiously examined every exhibit, giving points according to standard scale. A handsome cup presented for competition by Miss Hallam was won by Messrs. W. J. Palmer & Son, Buffalo, for the best vase of carnations in the show with Marquis, which was really splendid. Some thought that the vase of White Cloud by the same exhibitor should have got the cup; it was hard to choose between them: both were perfect.

The banquet in the evening was well attended by the craft and a most enjoyable time was spent. The mayor of the city was present along with some of his aldermen. Speeches were short and pointed and songs were inspiring. The only thing wanted, perhaps, to round matters off was the presence of the Great Scott, O Willie, we missed you.

Mr. Thomas Manton read some startling notes on carnations, taken from "Flora Historica" (I think that is the name) of 1829, to the effect that our standard for size of bloom now is only half an inch larger than it was at that date, the standard for stem, calyx and

petals even exceeding that of the present day.

Many outside florists were present (though I was sorry not to see any from Montreal). Amongst them were Messrs. J. Gammage and Deeks, of London; H. Brown, of Hamilton; J. Gilchrist, Guelph; E. Dale, G. Mullen, W. Fendley, R. Jennings, Brampton; W. Mott, Philadelphia; B. S. Myers, Buffalo, and others.

Mr. George Mills, as usual, was superintendent of the show, and it goes without saying that no stone was left unturned to make it the success it was.

A. H. EWING.

MISSOURI BOTANICAL GARDEN.

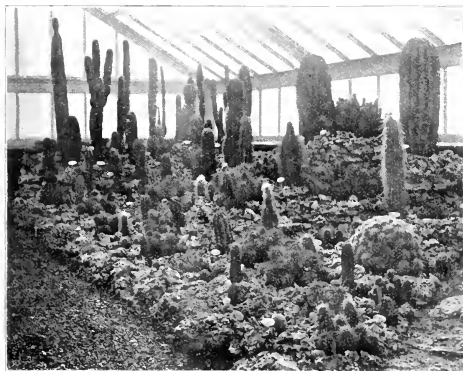

The Succulent Houses.

From the director's administrative report for 1900, which has recently been issued, it appears that the plant houses at Shaw's garden have been increased by the addition of a Yucca tower, an Acacia house and a Cactus house, of steel-rafter construction, with smoken pipes, the plants being planted out naturally so as to give an idea of their appearance in nature.

The collection of succulents at Shaw's garden is probably the largest in the world, and is variously housed, but in the new ranges a few selected species are displayed in specimen plants so as to give a clear impression of the groups to casual observers. The accompanying illustrations are from photographs which have been kindly sent to us by Mr. A.

flowers with a variety and richness of coloring, combined with delicious fragrance that was not dreamed of in the past. With this improvement in the sweet pea, brought about by years of faithful work in its culture, has come an increase in popular favor which has brought the sweet pea to the front rank among our flowers, both in the garden and in the greenhouse.

It is important for succulents to be only just as close to the ground as possible at the middle or end of the present month, the object being to get the vines well settled before the warm weather sets them into active growth. Select a sunny spot in the garden and as soon as the ground is dry enough, clean it thoroughly and cultivate, then dig a trench four

Cacti at the Missouri Botanical Garden.

G. Ulrich, of St. Louis, who, by the way, is not a cactus sharp but an amateur, possessing a large private collection of this latter group.

SWEET PEAS.

(Read before the Germantown Pa. Horticultural Society, March 11, 1901.)

The sweet pea, which grows wild in parts of Italy and in the islands of Sicily and Sardinia, was introduced into England two hundred years ago. Since that time wonderful progress has been made in its development, until today we have

The skillful work of the hybridizer has produced varieties that enable us to prolong the blooming season of the sweet pea so that it extends throughout the entire year, possibly excepting the months of August and September, in an unfavorable season. June and July are, however, the months when sweet peas in and about Germantown are in their glory; during these months each one of us who has a small plot of ground that is exposed to the sun may readily grow fine sweet peas.

feet deep and a space wide. Let the trench face the south if practicable. If it is desired to have two or more rows they may be dug parallel to the first row and with about four feet between. When the trenches are dug, put in three or four inches of good barnyard manure and cover this evenly with a like depth of soil. The trenches are now two-thirds full and ready for the seed, which should be sown somewhat more sparingly than ordinary peas.

Cover the seed very carefully until the trenches are half full or within an inch or two of the ground level, using great care to keep the soil both above and below the seed even and free from lumps; this is very important to success and should be done by a person accustomed to the use of the hoe. When the seed gets well up in the trenches another careful hoeing should be given, the remainder of the soil from each side being drawn lightly up to the rows. This is all the cultivation required except a hoeing to keep the weeds down; usually one is enough and pulling out any stray weeds that may appear in the rows.

When the vines are six inches high they will require support. The best way is to use wire netting with a one inch mesh, known as chicken wire; it comes about four feet wide and can be cut in any desired length. Stretch this wire tightly, close to the rows and fasten it to uprights driven into the ground. The effect is very neat. The wire is not expensive and when rolled up and put away in a dry place at the end of each season it will last for years. The vines will need a little training, especially when the support is first in place.

When the vines begin to bloom it is important to pick all the flowers as soon as they are fit, for if they are allowed to go to seed the blooming season is very

There were also quite a number of flowers entered for exhibition only.

The following seedlings were judged for certificates: Mrs. E. A. Nelson, introduced by E. A. Nelson, of Indianapolis, a grand pink, color and form of Scott, scored 913 points. No. 7234, a good white, by Witters-taetter, scored 86 points; Norway, white, by H. Weber & Sons, scored 85 points. They also exhibited Egypt, a beautiful crimson, which scored 86 1/2 points.

The American Rose Company sent on their new rose, the white Golden Gate, but it failed to receive the number of points required for a certificate, which was probably due to the distance it was shipped.

The following visitors were in town during the past week: H. Heller, New Castle, Ind.; J. A. Evans, Richmond, Ind.; Geo. M. Garland, Chicago; G. Teilmann, Marion, Ind.; Jacob Schulz, M. Kunsman, Louisville, Ky.; H. Riemann, Wm. Bertermann, Ed. Bertermann, A. Wiegand, E. A. Nelson, J. Grande, Robt. McKead, M. Billingsley, J. Hartje, Indianapolis, Ind.; Geo. A. Heind, Toledo, O.; Jno. Heind, Terre Haute, Ind.; M. Rasmussen, New Albany, Ind.; Jos. Rolker, New York; S. S. Skidelsky, Philadelphia; Theo. Bock, Hamilton, O. B.

INDIANAPOLIS, IND.

Trade Notes.

Business in this city is keeping up well considering that it is Lent and the florists are supposed to have little to do. There may not be so many swell affairs that take in a lot of stock, but there seems to be enough doing to keep all the good stock used up right along. Good roses and carnations keep sold up clean, but of violets there are many more than can be disposed of and of bulb stock there is also plenty.

A trip around to the growers showed them to be in good shape and most of them have some good stock coming on for Easter.

John Hartje has violets by the million and his Princess of Wales are simply loaded with grand blooms. John has enough carnation seedlings to plant an acre and if numbers count for anything he ought to be right in it.

Henry Riemann always has his place in trim condition and he is always busy; this time it was funeral work. His cinerarias and Primula obconica are fine. These primulas sell better than the Chinese strain when grown well like these are.

Bertermann Bros. have a lot of fine stock coming on of all kinds needed for a store trade. They have lilies by the thousands in all stages. They have several hundred Mrs. Lawson which are doing fine and they are so well pleased with it that they intend to plant a bench of it next season.

E. A. Nelson is proud of his seedling carnation which he has named Mrs. E. A. Nelson and he says it scored pretty high at Cincinnati on March 9. No visitor goes away without having a good look into the house which he has planted to it. This variety will be in evidence at the annual meeting which is to be held in our city next year.

Baur & Smith have their carnations in fine shape. They are, by the way, the only growers around this city who are successful with E. Crocker and it is fine with them. There is no sleepiness or streaks about their blooms. Among

their seedlings are some grand things that will no doubt be heard from at the proper time. Cyclamen in 7 inch pots 7 feet across and full of bloom are seen here and they have sold well. Their best Easter stock is a lot of Crimson Rambler in pots which are coming along in fine shape.

On the 8th a party of florists went on a trip to New Castle, Richmond and Cincinnati when they attended the special carnation meeting on the 9th. They report a good time and no doubt the writer has missed a pleasant trip. Full particulars are not obtainable as yet, as the boys need a little more time to recover from the effects before they can talk and think clearly. A. B.

BUFFALO.

Last week should have been the best weather of the winter, but, alas, it was the worst. On Tuesday morning last arrived promptly on time that august body known as "the executive committee of the S. A. P. and O. H.," and I honestly think that for intelligence and business ability they will compare favorably with any previous committee of the good old society. President Patrick O'Mara, Vice President Wm. F. Kasting, Secretary Stewart, Treasurer Beatty and J. D. Carmody, B. Cartledge, R. Witters-taetter, J. F. Sullivan, E. M. Wood, Emil Buctner, C. W. Ward and Alex. Wallace. This accounts for all of them except Prof. Cowell, who is in Jamaica, and Lawrence Cotter, who we did not have the pleasure to see in Buffalo. Their deliberations and conclusions will all appear in good time. A very able presiding officer kept them at work and by Wednesday noon their business was over. Now, never did the poet say anything truer than that "the best laid schemes o' mice an' men gang aft a-gley." We had a half dozen sleighs engaged for a trip around the Pan-American grounds, but riding was out of the question. It was the cold, blustering, drifting day of the winter, and to hurry from one point of shelter to another was all the visitors could be induced to do. Had the Midway, with its most alluring features been running, it would not have sufficed to hold even the older members of the party and a return to the city, where a warm and comfortable bowling alley was ready to receive us, was highly welcome.

Three games were played, but as the sides represented no particular section of the country the scores are not important. Vice President Kasting was captain of one side and W. S. of the other, and in spite of the good playing of Mr. Kasting and the feeble effort of W. S. the latter's team won all three games. I tell you when you have such veterans as R. Witters-taetter and such a colossus as Emil Buctner and such weight and energy as Capt. I. Braik on your side you can't very well lose. Any team that has six Mr. O'Maras next August will stand a good chance of finishing on top. He is a straightforward, earnest roller and is there every time.

It is impossible to notice the many different styles, but those who have never seen J. D. Carmody and ex-President Wood roll know little about the intricacies and possibilities of this popular game. Carmody approaches the line with a low, stealthy, crouching gait, such a position and action as you would imagine was that of a man-eating tiger when about to feast on an unsuspecting Hindoo maiden. For his age he has remarkable speed, and is great on spares, a sure

indication of a good eye and every florist knows that meat saw eye.

Mr. Wood's position and delivery is entirely different. He approaches the ball line with a pleasant, ambling gait with the ball dangling at the end of his fingers as if he would be very glad to get rid of it, as you will occasionally see a man removing a dead cat from some locality where it was out of place. There is a great lack of speed compared with the expert players, but the triple screw on the ball makes up for all that. It first runs to within an inch of the left hand gutter, then curves over to within a hair breadth of the right and then rolls up against the center pin. Here is where what is known as the back screw tells, or twice out of three times down tumbles every pin. It's remarkable and cannot be fully described.

John Evans is quite a bowler; pity there are not a few more like him in Richmond. Our Dan Long was great on double headers and if he had a little more control of the ball he would be a dangerous man.

The evening was spent at a vaudeville show, but not the one we intended. Buffalo has as fine a house in this line as any in the land and much finer than can be found in many big cities, but, alas, the White Rat trouble shut up that one and a poorer quality was indulged in. Several carnation enthusiasts visited Mr. Palmer's place on Thursday in company of Mr. Palmer and W. S., and I believe enjoyed it very much.

The committee was well pleased with the convention hall and all expressed the belief that the society has never had a better meeting place. Excuses or apologies are worse than idle, but I do feel that a greater welcome could have been given the visitors, but things were "agin us" and there is plenty of opportunity in store to redeem ourselves.

Business has been just fair for Lent, with plenty of flowers. We were very sorry we could not visit Toronto to participate in their carnation exhibition. Mr. W. J. Palmer is the proud possessor of a beautiful silver cup known as the John Hallam cup, which was awarded him at Toronto for a fine display of the leading varieties, including Lawson and the Marquis.

The principal visitor in town last week was Mr. Arthur Cowee, of Berlin, N. Y., the well known gladiolus specialist. Although it is only a side issue with him, he is marvelously successful, as the whole country knows, and he deserves to be, for he puts brains, energy and snap into his work. It is gratifying to know that in conjunction with Mr. Groff of Simcoe, Ontario, they will make the largest exhibit of gladiolus at the Pan-American that has ever been staged.

W. S.

ST. LOUIS.

The Market.

Business is still in the same quiet condition that it was in last week. Prices on all grades of stock are on the downward grade. This is especially true of roses, violets and bulbous stock; the latter is a great glut at all the commission houses.

Carnations are holding up fairly well and most of the better stock is disposed of at \$2, extra fancy ones bringing a little more. In 500 lots they can be bought for \$1 per 100.

Roses are very abundant and the de-

mand fairly good—82 to 85 (about the top price for good stock); short trimmed stock of the poorer grades is 60 to 81 per 100. The quality of this stock is better just now than it has been at any time this year. A few cold and cloudy days the past week put a check to the supply, but it is still more than sufficient to meet the demand.

The market is overstocked with violets and the commission men have great difficulty in selling them. Prices, of course, are way down, some selling as low as 81 per 1,000 in 5,000 lots. A great many of them were dumped the past week.

The same can be said of bulbous stock. Great piles of all kinds are stacked up at the commission houses. Romans, paper whites, daffs, Dutch hyacinths, tulips, valley, freestars, callas and Harrisii suffer alike. Prices can hardly be quoted at this writing. Sweet peas are a drug on the market and can hardly be

the skillful manner in which the work was done.

The Engelman Botanical Club met Thursday night, March 7, at the St. Louis Medical College. Prof. William Trelease spoke on "The Missouri Botanical Garden" and illustrated his talk by stereopticon views.

Henry Ostertag, of Ostertag Bros., leaves tonight for Chicago to decorate the store for the opening of the new branch of May, Stern & Co.

Theo. Miller makes a fine show of blooming plants at his place on Delmar boulevard.

The following meeting was poorly attended Monday night, only six members being present, and the rolling was not up to the standard. The scores were as follows:

	1.	2.	3.	4 Total.	Average.	
C. A. Koehn	167	292	153	169	682	171
J. J. Henke	177	147	267	179	669	167
J. W. Kuntz	174	115	116	115	515	129
John Young	158	125	138	111	532	133
Will A. Sells	79	179	111	128	497	124
P. C. Webster	121	127	151	122	521	128

J. J. B.

Charley Hale was hustling violets Monday, and he had some fine Beauties in his window. Blackstone is doing well and is getting in shape for Easter. Just across the street a very artistically arranged window strikes the eye; Mr. Dehmler reports business as even better than expected, considering the short time he has been there. Belgiano and the rest up Fourteenth St. all seem to be moving. Mr. Robertson, on Connecticut Ave., reports good business last week, and Mr. Freeman, on Thirteenth St., has some exceptionally fine cyclamen and azaleas in his window.

Fourteenth St. has at present seven florists, and some of them keep open till midnight. It looks as though there might soon be some all night flower stores here.

Senator Forsaker had a large dinner on the 3d and another on the 7th. The flowers used were double yellow and red Tennesse tulips, and the center piece was a scroll running from the center to each end of the table. It was arranged by Mr. Dehmler, and was much admired. He also arranged the decorations at another dinner on the 3d, at which many Metcours and Romans were used. The parlors were decorated with palms and azaleas.

BABON.

ST. PAUL.

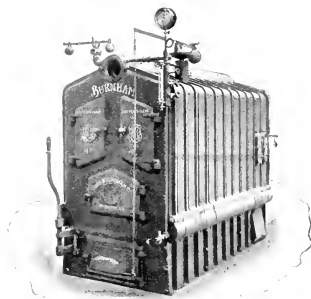

Various Items.

Lent has produced an appreciable dullness in trade, though Saturday night usually finds stocks pretty well cleaned out. Prices are somewhat lower than they were but are still high enough to be profitable to the growers.

As Easter approaches the shortage of good stock becomes more apparent and unless we have exceptional weather during the next three weeks there will not be enough for the demand. Lilies are late, while many of the longiflorum seem to lack vitality to bring blooms. Azaleas as a rule are looking nice and will be in good shape and full of blossoms for the spring holiday. Some very good cinerarias are seen, and a few nice hydrangeas. There is the usual abundance of cheap bulbous stock, such as tulips, hyacinths, etc.

In cut flowers there will be a good supply of all seasonal stock. A careful study of the local market from a retailer's point of view suggests the following hints to the growers in this vicinity: Plant more carnations, violets and Beauty roses, if you have the house to grow them in. Grow the fancy varieties of carnations and do not invest too heavily in high-priced novelties. The trade here demands good stock, but will not pay fancy prices for novelties. There has been an unusually good demand for Beauties this winter, but do not attempt to grow them in old or poor houses. Violets pay handsomely, provided you can get a full crop for Christmas and a good supply from then until Easter. Grow fewer bulbs, but put in Harrisii and longiflorum. In bedding plants grow geraniums and carnas, and in every line you undertake endeavor to grow only the best.

Travelers of late have been very numerous, and all report good sales. We remember the following. Others may have been here but are forgotten for the moment. Jos. Kolker and J. Mc Hutchison, of New York; Martin Reukauf, of Philadelphia; Mr. Schucht, of Milwaukee; the representative of Waarnar & Co., of

The Burnham Boiler.

WASHINGTON.

The decorations at the recent inaugural ball were naturally an object of some little interest to the craft, and all who could get a glimpse of them did so. The writer was there and after consulting others in the trade who inspected them it was agreed that it was the finest electrical display ever seen anywhere. Without the millions of electric lights the decorations would have looked very ordinary. The material used for the main decorations was needle pines and southern smilax. On the first balcony at intervals of about fifteen feet were clusters of red azaleas. Victor wreaths were used all around the hall. A group of Bougainvillea Sandieriana in the center of the hall, with specimen areca palms was fine.

As to corsage flowers, every one seemed to have agreed to wear violets with few exceptions.

The stores report business very good during the inaugural ceremonies. Violets were scarce, as it was a Monday. Nearly all of the violets used here come from Virginia, and the Virginians will not pick flowers on Sunday.

Mr. Gude reports business as very satisfactory. Louise's sweet girl clerks were busy when we called, and Small's had about as much as they could handle.

given away. Smilax is selling well and seems plentiful.

A very active shipping trade was reported the past week, and this helped the wholesalers to dispose of some of their surplus stock.

Among the local growers Easter stock, such as azaleas, daffs in pots, tulips and hyacinths in pans, hydrangeas, spiraeas, pot lilacs and other stuff, is looking fine and all of them expect a great business in that line for Easter.

Various Items.

It was a great sight and a great crowd that gathered at the Union Station last Thursday to celebrate the return of ex-Governor Francis and his associates from Washington. Nearly everybody brought a bouquet to throw at the governor and his colleagues, and they deserved all they got, as they have done much to bring the World's Fair to St. Louis.

In the afternoon Governor Francis and the rest of the World's Fair workers were given a dinner at the Planters'. On the tables were four large bouquets of American Beauties, six dozen in each vase, tied with the national colors. The decorations were much admired and Mrs. M. M. Ayers deserves great credit for

Holland: A. L. Vaughan, of Chicago and New York; E. M. Parmelee, of Detroit, Ont.; Mr. Spero, talking baskets, and Mr. Roberts, talking jardinières.
N. Y. Z.

THE BURNHAM BOILER.

The "Burnham" boiler, for steam and hot water heating, which is the subject of our illustrations, will need no introduction to the greenhouse trade, as this boiler has been well known during the past years under the name of Lord & Burnham Company's sectional heater. Owing to the increased demand for these boilers it was found necessary to increase the line and at the same time add improvements which, no doubt, will be appreciated by the trade in general.

One of the most important features in the new "Burnham" boiler is the method of connecting the sections. This is accomplished by means of a cast iron nipple, turned with a slight taper, the sections being bored out to correspond. As both section and nipple are bored to template it makes the sections interchangeable and facilitates the erection of the boiler, at the same time securing a perfect and lasting joint. The nipples and sections are made of the same material, thus avoiding cracking caused by unequal expansion and contraction.

It can readily be seen that this boiler has a large amount of direct fire surface, which chiefly consists of three tiers of triangular arms. The lowest tier of arms is the smallest, the second larger,

sure, such as usually found in green houses. The direct draught which is a great advantage when starting or burning the fire is provided for by an opening with damper in the hulle section.

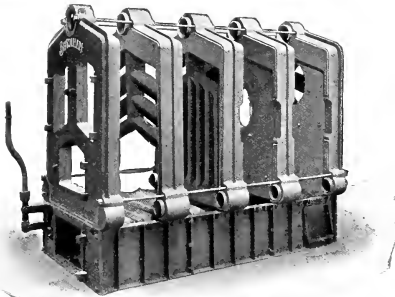

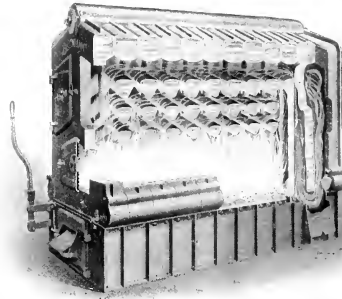

As most of the surfaces are direct and practically self-cleaning there remains but little to clean, but large cleaning doors are provided in the front and sides of the boiler.

The grates are of the Lord & Burnham Company's patented anti-dinker

CHICAGO.

The Market.

The volume of trade remains about the same as last week with prices a trifle easier on roses and a little firmer on carnations, especially whites. Roses now range from \$4.00 to \$7.00, with some sales of extra selects at \$8.00, and some under grade stock being cleaned up at \$3.00. Beauties are \$4.00 to \$5.00 a dozen for the best and they grade from

The Burnham Boiler.

the third being the largest. By this arrangement the rays of heat strike all the arms equally, thus making the direct surface of high efficiency. The upward incline of the arms towards the center and hottest parts of the boiler insure a rapid circulation to the outlet, which helps to secure very economical results. The products of combustion rise upward and after striking against and surrounding all of the arms pass over the fire wall section, then downwards and up between the hulle and rear sections. This form of indirect travel secures the maximum economy with the minimum of friction, as no matter how long the boiler may be the indirect travel is the same, thus adapting even the largest boilers for a low draught pres-

shaking and dumping pattern, and so constructed that the air circulates freely around every part, thus affording the least possible chance for warping or burning out.

Lord & Burnham Company, owing to the large and increasing demand for their boilers, has found it necessary to erect a new boiler shop. This has been furnished with the most modern machinery for the manufacture of boilers. This company is, therefore, even better prepared than before to take care of all orders and to make prompt shipments.

CLEVELAND, O. — The Grant-Wilson Floral Co. has been incorporated with a capital stock of \$25,000.

that down to 50 cents for the poorest. Good ordinary carnations range from \$1.50 to \$2.50, with fancy at \$3 to \$4, and some red Bradts bringing \$5 at Bassett & Washburns. On the other hand, Scotts and McGowans sell as low as \$1 to \$1.25.

Peter Reinbin is cutting some select Golden Gates that bring as high as \$12. Bassett & Washburn are cutting some really fine blooms of Liberty and the best sell at \$25 a hundred.

Bulbous stock is still moving very slowly and we hear of sales of good tulips and daffodils at as low as \$2 a hundred, which must be very discouraging to the growers.

Last Saturday violets were being sold by the fakirs on the street at 5 and 10 cents a bunch, which tells the violet story.

Various Items.

At the meeting of the Florists' Club tomorrow (Friday) evening, Mr. Benjamin Durfee, of the American Rose Company, Washington, D. C., will display blooms of his White Golden Gate roses and will probably favor the members with a talk on the growing of the Golden Gate. The program also includes papers on "The Easiest Way to Force Lily of the Valley," by August Jurgens and H. N. Bruns.

A meeting of the executive committee of the Horticultural Society of Chicago was held last Monday afternoon and the work of preparing for the annual exhibition next November was started. The preliminary premium list will be issued at an early date. The committee to prepare same consists of Messrs. E. Buettner, John Reardon and W. J. Smyth.

Mr. C. M. Dickinson, manager at E. H. Hunt's, left last Sunday for the east for a week's stay.

Mr. E. Buettner leaves next Sunday

night for New York, where he will act as one of the judges at the exhibition of the American Rose Society.

George A-mus, E. F. Winterson, H. Coulson, P. Hurston and W. L. McLaughlin have been bowing as a team in the Union League of West Chicago and they stood at the head of the list at the end of the series. As a result, they will divide among themselves the juicy first prize of \$75.

B. D. Kapteyn, representing Gt. van Waveren & Krupf, Sas-enheim, Holland, was a recent visitor.

George Scott is again on duty at Kennicott Bros. Co., after several weeks' illness with typhoid fever.

There is some little guessing being done on the question of lilies for Easter. It is said that the disease has been more virulent than ever and that as a result the supply of first-class flowers will be short. Others hold that there will be plenty of lilies when they are wanted.

Simmer & Co., Ridge avenue, near Adam Zender, who have grown vegetables under glass for some years, will this year turn their houses into plants for cut flowers and have purchased a big stock of carnation cuttings from Wietor Bros.

Mr. E. E. Fresser, of Kennicott Bros. Co., says it has been a most peculiar season, and the market has been a difficult one to keep the run of. While their business has been equal in volume to previous seasons it has changed some little in character, violets and bulbous stock cutting much less of a figure than formerly. Roses and carnations are more than ever the mainstays, and the "variety" that is reported to be "so much needed" has met with less call than in previous years.

NEW YORK.

Club Meeting.

The regular meeting of the Florists' Club, held on Monday night last, was again most interesting, roses being the chief topic. It was expected that many new roses and a goodly display of others would be shown, but somehow or other, perhaps because every inbox was full, none appeared in the club rooms, except a vase of the grand new rose, "Robert Scott." These blooms represented the rose in every stage of development; some of them were five or six inches in diameter and of remarkable substance. By a special vote the rose was awarded the club's silver medal.

Mr. E. G. Hill, of Indiana, was to have been present to open a discussion on roses, but sent his opinions instead, which were read by Mr. O'Mara. This paper opened up a very interesting discussion. Mr. Robert Scott, of Philadelphia, who was present, said he had seen nothing in Europe last summer worth considering as an American forcing rose. He had had one or two supposedly good new varieties sent over to him, but they were only now showing bloom and their slowness made them useless. He was under the impression that Liberty would be better in three years; overpropagation exhausted the vitality of any plant although he had not seen Liberty anywhere so fine as they were at Mr. A-mus's place. He thought when the rose was better understood it would give more satisfaction. One thing, the rose, like others, could not stand a check, and he found it did better in light soil.

Mr. O'Mara reviewed the roses introduced the past twenty years, and said

of a study of the matter he considered roses raised in the south of France did better in the United States than those from any other part of Europe. The climate there was similar to ours, and he thought this a powerful element; he was under the impression that America needed a race of roses of her own, and this was rapidly being accomplished by the few hybridizers we have here. He thought many of the old varieties, such as Conelia Cook, Puritan, etc., would again come into popularity, and John Cook, of Baltimore, had some new varieties now that would, he thought, prove very valuable.

Mr. Scott said the white Mme. Cochet was one of the best outdoor roses. Mr. Stewart said Burbank proved to be hardy in his garden. Mr. Atkins said they were making several experiments in the matter of grafting stock; they got best results from wood of their own planting grafted on to dormant imported stocks; eyes taken from imported roses most often proved useless on account of their being started with them. Mme. Van Houtte, Mme. Cochet and Kaiserin proved great successes, but they grew a large collection of bedding roses which proved more than satisfactory.

There was quite a discussion on the proposed interstate laws regarding the fumigation of nursery stock. Mr. Kelsey asked for information on the plants commonly called "Florists' stock," and was sorry, as he understood it, that the florists did not help the nurserymen in having portions of their stock exempt from the law. Mr. O'Mara explained why and said the nurserymen had been given every opportunity to accomplish great good to themselves. The florists had succeeded in having everything grown under glass exempt from the stringent laws and the nurserymen had only themselves to blame for the condition of affairs.

A vote of thanks was sent to W. R. Smith, of Washington, for his valuable services towards procuring a charter for the S. F. J. M. W. Wailes reported that the national society had placed one silver and one bronze medal for competition at the club's show in October. The several committees reported progress. Mr. O'Mara said he had delivered the club's engrossed resolution to Mr. Starin and that gentleman was very grateful for the club's action.

J. L. D.

HEATING.

Our present plant consists of five 20x100 feet houses, heated by two small steam boilers. We are going to build three new houses 27x100 feet for growing roses and the capacity of our present boilers is not sufficient to heat the entire plant when completed. Would it be economy to put in a separate boiler for the new houses? If so, would you advise steam or hot water? Or should we replace the two old boilers with one large enough to heat the whole plant, and would you advise steam or hot water? The old houses are piped with 1-in. pipes, which are, of course, too small for water, and we don't want to go to the expense of repiping this season. If you could give us a little light on this subject you would greatly oblige.

G. & D.

In reply to the inquiry of "G. & D.," one of either of the following methods should be adopted:

The first suggestion would be, assuming the boilers now in use are in good

working order, to install a 30 H. P. wrought iron tubular boiler, and if possible connect it in battery form to the present boilers. The 30 H. P. boiler would have a liberal surplus of capacity over the immediate requirements, which would tend to relieve the older boilers, then when the old boilers give out a second 30 H. P. boiler could be installed, which in connection with the first would have a surplus of capacity sufficient to enable you to build three more 27x100 foot houses. If it is not your intention to increase your glass area, and the old boilers are pretty well worn out it would be better to remove them, and substitute one 50 H. P. wrought iron tubular boiler. I would not consider the replacing of the steam plant in the present houses by hot water, and the new houses should also be heated by steam in connection with the old ones.

If the heating of the old houses by steam is not perfectly satisfactory it is the result of an imperfectly installed system, and not the nature of the heating medium.

HENRY W. GIBBONS.

CARNATION IRENE.

Messrs. Crabb & Hunter, Grand Rapids, Mich., send us some blooms of their new pink carnation Irene. While it cannot be classed as a fancy, the flowers are of good size and form, a fine, clear pink, and are borne on first-class stems with good foliage. If it proves as free with others as it has with them it should certainly make good their claim that it is a most profitable commercial pink carnation. It is certainly worthy of a trial, especially by those who have not the facilities for growing extra fancy flowers, but want an abundance of good blooms in return for a minimum amount of care and attention.

BUTTE, MONT.

The Lenten season is having its effect here; trade is at a standstill, except funeral work, which comes as regular as ever. We expect quite an increase in the flower business this year over last, as the town is taking on quite a boom, many large blocks and buildings being now under construction.

We now have three retail florist stores in the city, against two last year.

Law Bros.' books show an increase of 25 per cent for the months of January and February over the same months last year.

Five years ago a traveling salesman for bulbs and florists' supplies was seldom seen in Butte, but now they all seem to make it a point to come here while on their Western tours.

We have been having a run of drummers this spring and the last to arrive was Arnold Ringier, general agent for W. W. Barnard & Co., and although he came late there had been orders reserved for him and he got his share. Mr. Ringier has been in Butte before, so did not care to see the town. He confined himself closely to the florists' shops until the curfew bell tolled, when he promptly retired.

L.

SYRACUSE, N. Y.—John P. Bell, for the last eleven years with Henry Burt, died Feb. 27, aged 53 years. He was born in England and came to America thirty-one years ago. He was widely known and had a host of friends. He leaves a widow and one child.

WE HAVE advice from Mr. William Scott that he mailed a batch of miscellaneous seasonal hints for this issue, but the copy had not reached us up to time of going to press.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head. Every advertiser is entitled to a free advertisement not exceeding 32 words in any issue desired during the year. If the advertisement exceeds 35 words, send at the rate of one cent for each additional word.

WANTED—A good, bright lad, 18 or 19, that has had experience in flower trade. Answer, with reference, C. C., care of Florists' Review.

SITUATION WANTED—As working foreman by good grower of cut flowers and general stock; German, age 32, single; life experience; best references; state particulars. Address B. Florist, 10th St. and 1st Ave., Williamsburg, New York City.

WANTED—I want a good boy, 16 or 17 years of age, to learn the trade, or one who has had a little experience in the business. Address W. N. Drake, 56 Chicago Street, Keosauha, Ia.

FOR SALE—Or to let for a term of years the Mountain Villa Conservatory, containing about 1000 ft. of glass well stocked. Address T. Florist, 254 Sharon, Mass.

WANTED—Florist to take charge of 10,000 feet of glass where carnations and violets are grown. Wages on shares. Single man preferred. Eliza K. Whitson, Anglin, Va.

WANTED—Young man who understands roses and carnations to take charge of a range of houses. Must be one who takes an interest in his work. Write Geo. A. Kuhl, Pekin, Ill.

WANTED—Two good rose growers. Apply to Peter Reuberg, of Wabash Ave., Chicago.

SITUATION WANTED—By a first-class grower of roses, carnations, violets and general stock; competent to take charge. Address C. A. L., 309 South Laurel St., Richmond, Va.

SITUATION WANTED—By good all-round florist, 8 years had 2 years' experience in general stock. Not afraid of work. Nationality, English; age 25. Address Box 48, Lexington, Mass.

WANTED—Florist; working foreman; roses, carnations, mums, etc.; must be good manager, capable of handling men; be able to furnish very best references from former employer or to ability, etc.; only first-class man need apply; moderate size place in Phila.; good wages with tenant house. Address Phila., care Florists' Review.

WANTED—Young man, who has had experience in growing general nursery stock and joining gardening; must be sober and industrious, with good references; steady position; annual increase in wages; state wages wanted, with board. State Nursery Co., Helena, Mont.

WANTED—As our foreman is going into business for himself, we want another man. Stuart & Haugh, Anderson, Ind.

WANTED—For Illinois, an American boy in his teens that would like to learn the floral business; a steady job with board and lodging and a fair salary; must be strictly temperate; state wages expected. Address I. care Florists' Review.

WANTED—To sell whole or half interest in greenhouse of 1000 square feet in good town of good territory; place in good location; write for particulars. Walter Boulet, Ponca City, O. T.

SITUATION WANTED—As a good all round florist; growing roses, carnations, etc.; capable of taking full charge; single; 21 years' experience. Address 3, care Florists' Review.

SITUATION WANTED—By young man, age 22; 7 years' experience in general greenhouse work; private or commercial. Address W. J. E., 1805 Beard street, Louisville, Ky.

SITUATION WANTED—By florist and gardener, 6 years in present job; well recommended; life experience; English; married; age 37; commercial or private. Address E. Castell, Sillery Nurseries, Bergeville, Quebec, Canada.

SITUATION WANTED—By thoroughly experienced cut flower grower; 14 years in this country; single; references. Address K, care Florists' Review.

SITUATION WANTED—By a first-class grower of roses, carnations, mums and violets; references; married; give full particulars. Address J. care of John S. Martin, Ntffville, Lancaster Co., Pa.

WANTED—Several men as assistant rose growers. We apply ready to work to Bassett & Washburn, Hinsdale, Ill.

THE FLORISTS' REVIEW

G. L. GRANT, EDITOR AND MANAGER.

PUBLISHED EVERY THURSDAY BY

THE FLORISTS' PUBLISHING CO.
520-535 Caxton Building,
334 Dearborn Street, Chicago.Subscription, \$1.00 a year. To Europe, \$2.00.
Subscriptions accepted from those in the trade
only.Advertising rates. Per inch \$1.00; 1/2 page, \$15;
full page, \$30. Discounts. 6 times, 5 per cent; 13
times, 10 per cent; 26 times, 15 per cent; 52 times,
30 per cent. Discounts allowed only on consecu-
tive insertions. Only strictly trade advertising
accepted. Advertisements must reach us by
Wednesday morning to insure insertion in the
issue of the following Thursday, and earlier will
be better.Entered at the Chicago post-office as mail mat-
ter of the second class.This paper is a member of the Chicago Trade
Press Association.WASHINGTON, D. C.—The bill incor-
porating the Society of American Flor-
ists and Ornamental Horticulturists has
passed the senate and has been signed
by the president, thus becoming law, so
the S. A. F. finally has the national
charter that has been so earnestly striven
for.PROVIDENCE, R. I.—The Florists' Club
has decided to hold a carnation meeting
May 9. Flowers are fairly plentiful, but
none too many white. Except for fun-
eral work trade is light. Violets are
very abundant and are selling at unusu-
ally low figures.OTTAWA, ONT.—On account of the
death of Queen Victoria almost all the
functions planned for the season were
abandoned, and as a result trade has not
been what it should be with the florist.
It is hoped that conditions will improve
after Easter.FARMINGTON, CONN.—Charles S. Mason
reports that so far as he has seen and
heard stocks have done well this winter,
particularly roses and violets. Of the
latter there has been either an oversupply
or a lighter demand, and his own experi-
ence points to the latter. Carnations
have done fairly well. There was a
shortage at the holidays, but otherwise
no complaint.KALAMAZOO, MICH.—At the annual
meeting of the Kalamazoo Nursery and
Floral Co., held Feb. 26, the election of
officers resulted as follows: President,
C. A. Maxson; vice-president, James M.
Davis; secretary and treasurer, C. A.
Krell; manager, W. C. Cook. The offi-
cers and E. J. Phelps constitute the
board of trustees. The company has
purchased property adjoining its loca-
tion and now has thirty acres of land.
An extension of the business is planned
for the spring.

Asparagus P. N.

ORANGE, N. J.

Floricultural Society's Meeting.

At the regular monthly meeting of the New Jersey Floricultural Society, held on March 6, Mr. J. C. Williams, of Montclair, addressed the society upon "Pruning," taking the grape as an example and confining himself to the Kneifer system upon that. In the discussion which followed other fruits were touched upon and great warmth was shown in the condemnation of the prevailing manner of shearing shrubs without regard to whether the bloom was produced upon new wood or that of last season's growth. Mr. Williams giving an instance within his knowledge where a Japan weeping cherry had been cut or shorn back upon the model of a broom. Forest trees were also discussed and the merits of fall or spring pruning when first set out, upon all. Mr. Williams called upon various members by name to respond to topics outside the field of the nurserymen, to which he confined himself, and George Smith and A. D. Rose were among those who contributed from their valuable experience.

In the business meeting preceding the discussion it was determined to repeat the feature of the school children's work at the forthcoming fall exhibition, and provision was made to supply plants in May and stage them appropriately in November at the society's competitive exhibition.

Five new volumes added to library, and one new member elected. J. B. D.

PEKIN, ILL.—On Feb. 18 an accident ruptured one of the large steam boilers at the green houses of Geo. A. Kuhl. Fortunately there was a reserve boiler that helped out during the cold snap. The boilers were insured in the Fidelity and Casualty Co., of New York, and Mr. Kuhl says the company was very prompt in sending inspectors and adjusters, and that as soon as claim was made out in full and the papers could reach their office, return mail brought him a check to cover the loss. He says he cannot afford to run his steam plant without insurance of this kind.

MONTREAL, CAN.—At the recent carnation show many fine blooms of standard sorts were shown, but the only novelties displayed were Roosevelt, from C. W. Ward; Queen Louise, from J. L. Dillon, and several fine new sorts from the Chicago Carnation Company. The latter included a magnificent red that was not labelled. It and Roosevelt and Queen Louise were awarded certificates of merit.

SPRINGFIELD, O.—A. R. Adrich, the florist, was thrown from his wagon March 2 and had his head badly cut as the result of the tumble. He was able to go home on a car.

THE annual special spring number of THE FLORIST'S REVIEW will be issued March 28. Prepare your advertisements now.

NOVELTIES

OF REAL MERIT are always worthy an investment. They always bring good returns. WE HAVE THEM. All the leading Novelties in Geraniums, including the best of last year's and 1900 varieties. This year's leader is our new dwarf "Little Pink." No doubt you have heard of it. The only dwarf Geranium ever awarded Certificate of Merit by the S. A. F. "Clyde" is the best Mammoth Geranium of its color. Strongest grower we know of. An A No. 1 bidder. All of this year's New Carnations, also standard sorts.

Send for our descriptive price list, which also tells you something of the best Garden Wheel Hoe on earth. W. E. HALL, CLYDE, O.

Nephrolepis Wittboldii

THE GEO. WITTBOLD CO., 1657 Buckingham Place, CHICAGO.

Mention The Review when you write.

NEW CASTLE, IND.

Last Friday the South Park Floral Co. kept open house and entertained florists from all over Indiana and a few from Chicago and Cincinnati. The day was spent looking over their big range of glasses and the entire party was given a fine dinner at one of the hotels, there being 46 at the table. All present report a very enjoyable and instructive day and say many pleasant things about the generous entertainment provided by the hosts of the occasion.

Mr. Peter Weiland has everything in readiness for the building of the new range of glass here and has already decided upon the varieties of carnations to be grown. One house will contain 8,200 plants of the Marquis, another 8,200 plants of the Genevieve Lord, another 5,000 Brads, 2,500 Gomez and 2,500 Lawson, the plants in this house to be planted closer than in the others. Another house will contain 2,500 Melba, 500 Prosperity, 500 Dorothy, 1,000 Mrs. Bartlett, 2,500 Lorna and 5,000 Pink Armazindy. Another, 6,000 White Cloud and 2,500 White Daybreak. Another with different varieties.

The asparagus house will contain 6,000 A. plumosus, 4,000 A. Sprengeri and 3,000 smilax. The roses will be mainly Beauties, Brides and Maids, and there will be 16,000 plants of roses.

BUFFALO BOWLERS.

I thought that possibly the bowlers interested in the coming convention would like to know how the Pan-American boys are doing. On March 2 a match game was played between the florists and a local team called the Delevans. While the Florists lost, it was no certain thing until the last ball was rolled. The scores follow:

FLORISTS.							
	1	2	3	4	5	Tot.	Av.
W. R. Scott	150	182	175	175	155	837	171 4/5

M. BLOY, Scorer.

MONONGAHELA, PA. — Isaac Shelby Crall, the florist, died Feb. 15, aged 74 years. He had been in the business here for many years and was widely known and respected. He is survived by a wife, two sons and one daughter.

CAMDEN, N. Y. — H. B. Snow has fitted up a neat sales-room with a large show window at 27 Railroad street, which he will conduct in connection with his greenhouse business.

You should not fail to have a strong ad. in our special spring number, to be issued March 28.

THE NEW CANNA Golden Age

THIS CANNA originated on my grounds in Ocean City from seed dropped from the Florence Vaughan. The bloom is a rich golden yellow, free from spots or stripes, has five broad, full petals, which gives it the shape of a lily, is fully as large as the Italia grows about four feet high and is a vigorous grower. The foliage is a bright green. It is a canna of the orchid type, but stands the wind and hot sun fully as well as a Crozy. For hardiness and beauty it cannot be excelled by any canna in cultivation. The first root was sold to F. S. McDonald of Philadelphia, for \$20 in his own offer, while he stood looking at them in bloom last summer. We have but a few hundred roots, and anyone who desires to get into the stock of this lovely canna had better not wait. It is the only yellow canna in existence without spots.

Strong roots that will grow (two eyes), 50c each; \$5.00 per doz. Expressage prepaid.

G. P. MOORE, Ocean City, N. J.

MRS. F. JOOST Flowering Plants.

The most profitable of all the standard Pink Carnations. It will pay you to plant this instead of Scott. Strong Healthy Cuttings, well rooted, \$1.50 per 100, \$12.00 per 1000.

See our ad. in last Review for other varieties.

CASH WITH ORDER PLEASE.

**BAUR & SMITH,
38th St. and Senate Av., Indianapolis, Ind.**

GRAND RAPIDS, MICH.

Weather conditions continue very unfavorable to business and the blooming of flowers. Snow, rain, frost, more snow and sleet with a blizzard blowing, followed by a thaw, make up the weather conditions. In consequence, business was spasmodic, funeral work even was light at times, then all of a sudden a rush of orders that cleaned up carnations and kept roses within bounds. The conditions are peculiar, some are short on carnations, but have plenty of roses; some have an overstock of roses and plenty of carnations, and others are buying every flower used.

All interest is now centered in the lilies. It looks as though there was going to be a scarcity of that indispensable flower, and the majority of those that do come will be very short.

Recent visitors were George Raekban and Frank Beard, of Detroit; K. J. Kuyk's bulb agent, and A. L. Vaughan, who reports trade far better than it was last year up to the same date. G. F. C.

CASH PLEASE.

**EDWARD B. JACKSON,
STAMFORD, CONN.**

COLUMBUS, OHIO.

A severe electric and hail storm passed over this city last Sunday night, but the only damage done was at the Melrose Greenhouse owned by Alleck Bros.; the glass in the four houses being about half destroyed and considerable injury done to the roses. Mr. Alleck was in one of the houses when he was startled by the patter of hail, and the next instant fragments of glass began to fall in showers, broken by hail stones which he says were as large as pigeon eggs. The damage done will amount to \$1,000.

Mr. Maurice Evans, who has been confined to his bed for the past six weeks, is now slowly improving.

Mr. Gus Drobish is able to be up after a severe attack of the grip.

Mrs. E. L. Charles has been very ill with pneumonia, but is now convalescing.

C. A. Roth, the florist, was bound over to the police court for \$100 for assault and battery, which occurred on March 1. G. E. A.

KANSAS CITY, MO.

Trade Notes.

As might be expected, trade has fallen off slightly since the beginning of the Lenten season. The absence of large social events is most noticeable. Considerable is being done in house flowers and funeral work and every one reports good sales. Stock of all kinds is more plentiful and of excellent quality. To dispose of the influx of violets special sales are held here every Saturday. We see no harm in offering these inducements to the public, as thousands of violets are sold which otherwise might be a total loss to the producer.

W. J. Barnes is cutting some fine bulbous stock, especially in Harrisii lilies, which brings good prices.

There is not a more enterprising man among the craft here than R. S. Brown, of Prospect avenue. Commencing in his present location twenty-five years ago, he soon built up a prosperous business, his speciality being young rooted stock. At that time there were no improvements in his vicinity; now he is hemmed in on all sides by fashionable residences. A few years ago Mr. Brown took his son Nathan into partnership, Nathan devoting his time to the cut flower department, which has flourished under his management. This firm has recently purchased a seven-acre plot at Independence, Mo., and this spring will begin building 15,000 feet of glass for the growing of cut flowers exclusively. Mr. Nathan Brown will have charge of this addition, and he is fully equal to the responsibility.

Our able park superintendent, Mr. George Kessler, gave a very instructive talk one day last week to an interested audience in the lecture room of the Library building on the preparation and care of lawns and flower beds. Owing to the great activity in suburban residence building and the consequent increased interest taken in landscape gardening, Mr. Kessler's remarks were attentively listened to and brought out a general discussion on the subject.

Three weeks ago two young men of good appearance and representing themselves as rose growers arrived in town in search of employment. Both had been with well known eastern firms and had the necessary recommendations. Carlo Sachman is filling a position with Mr. Alfred Broman, of Independence, Mo., and John Buxton was equally successful with Mr. George M. Kellogg, Pleasant Hill, Mo.

The weather has been very changeable, all four seasons of the year being represented in the past week. We now have eight inches of snow, which arrived this morning from Kansas City, Kan. H. J. M.

RESULTS THAT PAID.

In rendering for their advertising bill under date of March 5, 1901, Messrs. Meyer & Sons, Willow Street, Lancaster Co., Pa., write: "THE REVIEW is the only one of three trade papers that has given us results that paid."

NEW ORLEANS, LA.—The Mardi Gras festivities brought an unusually large number of visitors to the city this year, and business was first class with the florists. There has been a good deal of rain and a slight frost, that did no material damage.

If you have a Lawn

You will want a **FINLEY ROTARY LAWN RAKE** this spring and you will have it early. It will not only save lots of work but it will do it better than it can possibly be done by hand. It will enable you to clean your lawn easily and efficiently in the spring and to keep it clean all summer. It will enable you to kill crab grass and weeds, grass, either long or short, twigs and litter of any stones included in a hand rake not touch. It will save its cost in 73 days on any lawn.

The Finley Rotary Lawn Rake in operation.

Price \$12.00. IT WAS GIVEN A CERTIFICATE OF MERIT by the Society of American Florists at the New York Convention, the judges reporting that they "Believe it to be far superior to anything else in the market."

Send for Illustrated Circular.

REPORT OF THE JUDGES

APPOINTED BY THE PHILADELPHIA FLORISTS' CLUB
TO JUDGE OUR

GRAND NEW ROSE

QUEEN OF EDGELY

PINK AMERICAN BEAUTY.

"We are convinced that this variety is a valuable addition to the list of forcing roses, being in every respect, except color, the exact counterpart of the American Beauty. The color is a beautiful bright pink, which is good, even in the full flowers. The fragrance is also as fine as that of Beauty, and the exhibited blooms showed remarkable vigor."

(Signed) **ROBERT KIFT,**
WM. MUNRO,
JOS. HEACOCK.

N. B.—Two of the above Judges received first prizes for American Beauties at the Rose Show of American Rose Society, New York, March 27, 1900.

MISCELLANEOUS SEASONABLE HINTS.

Propagating.

There are only a few weeks left when propagating soft wooded stuff can be done with ease and certainty, so make the best use you can of the next two weeks. When the bright suns of April arrive the extra heat entails much more care and watchfulness. Nearly all the soft wooded, quick growing plants such as salvia, ageratum, heliotrope, etc. are better propagated as late as this because they make plants of ample size and do not get stunted and unsightly by bedding time. Cuttings we continue to propagate till end of May, but that will root at any time with heat and water.

Caladiums.

It is a good time now to start Caladium esculentum. There seems to always be a demand for these big leaved plants; cut the root well up to the sound last year's bulb. The new roots don't come from the bottom of the bulb but from all over its surface. We find time and space saved by putting the bulbs thickly in flats in three inches of sand or sandy soil, and if the flats can be placed a little above some hot water pipes the bulbs will start very quickly and soon throw out lots of roots. Don't let them make much top growth in this position or they will be weak. In about three weeks they will be in good order for potting into 5 or 6-inch pots and will stand from that on the lightest, brightest and airiest house. If they are induced to make large soft leaves they are sure to lose them when put out of doors and are then several weeks behind the smaller but more hardened plants.

Canna.

Every one seems to believe that the popular canna will be in as great demand as ever, and even more so, and why not? There is something so suited to our semi-tropical climate about these stately and beautiful plants. It is a good time now to start the main lot. I have sometimes advised putting them in flats of sandy soil and placing the flats on pipes, and it gives them a quick start, but they must remain there but a short time. If you have a bench in a warm house it is just as well and better. Spread an inch of sphagnum on the bench and put the roots on it and then moss enough between them to about cover them, keeping the moss moist. They soon make a start and can be lifted and potted as soon as the roots have made a good start. The remarks about light and air apply to the canna equally as well as to the caladium. A stout, hardy growth is what is needed.

Seed Sowing.

By this time in the month the general crop of asters and other so called hardy annuals should be sown. We presume you have some asters sown a month ago, but now is a good time for the main crop. Marigolds, ten week stocks,

Phlox Drummondii, or any other summer annual, can now be sown. Balsams are very rapid growers and do not want anything but a high temperature so they can be delayed till early in April.

The "art" of sowing seeds has been so often described that I would not venture to dilate on it here. A few good rules, however, are: Cover the seeds about the depth of themselves and keep them uniformly moist. A sudden parching of the soil just as the seeds sprout has often been the cause of the seed-man being blamed.

Till the growth is above ground any amount of shade can be given, or even the flats or pans covered with a cloth, but directly they are above ground they must have daylight without bright sun, and as the little plants grow they must have the fullest light or they will be spindling, which is a bad start. As these annuals take up lots of room when pricked out into flats we try to manage to keep them in the seed pans till after Easter, and then we have either room inside or it is warm enough for them in a cold frame.

Cobea Scandens.

A seed of different nature entirely is that of Cobea scandens, one of the most useful summer climbers we have. Sow it now; there is plenty of time. There is a right end to put in the soil but it is difficult to describe and the safest way for those who do not know the right end is to sow the seed on edge. Just squeeze the seed into the soil edgewise and no covering of soil is needed. Keep in a temperature of 60 degrees and moderately moist and they will soon start. They should be potted off singly into 2 1/2-inch pots directly they show their character leaves, or rather growth.

Pansies.

Those who grow a few thousand pansies in frames for early use in vases must now keep a sharp lookout if they want good, sturdy plants. With a covering of snow or homelock boughs they have been doing well all winter, but now they want the glass over them and must be growing. Every day when the sun shines don't neglect giving plenty of air or your plants will be spindling and useless.

Chrysanthemums.

There is no better time than from now on to start your chrysanthemum stock, and we need it. There is no such thing as doing without the mums. When the meadow lark flies south and our woods turn scarlet and yellow we look with joy at the opening petals of the autumn queen.

Cuttings rooted in May, or even June, make just as good commercial flowers as any, but we can't root them all then, and must make use of all available cuttings from now on. With late cuttings you often hear complaints of

them not rooting well. The trouble is you don't keep them wet enough. You should never let them wilt. Soak them twice a day and keep the sun off them.

The varieties are too many for me to attempt to know even the best. I was much impressed last year with the great excellence of the grand yellow, Colonel Appleton, and although rather late for me to acknowledge it, W. H. Chadwick is a white of the very first order. It is easier to grow and a finer all around variety than the great Mrs. Robinson. Whoever intends to grow for exhibition cannot possibly dispense with Timothy Eaton, the great Canadian white, because in size and weight it will make any other mum look like thirty cents.

You often hear the remark, "My trade does not call for very large flowers." But if you can grow a large flower in the same space as a smaller one you are better off for I have never seen the customer who would not choose the large flowers if at the same price. Like dear, sweet Rosina Vokes, who delighted millions in "The Milliner's Bill," she snatched two books from the shelf and without looking at their titles said: "I'll take the big one."

Easter Plants.

I can't add much to my notes of two weeks ago on this important matter. Don't get nervous. The last two weeks does wonders, particularly if we get a bright warm spell, which with us is about due. I remarked before that I do not believe in putting lilies into a cool house till the first buds are ready to open or they will with a sudden check stand quite still, and if the buds begin to open two weeks before Easter they are then in a cool house just right.

I see some neighbors are getting in their bulbs much ahead of time. You must remember that the hyacinths and daffodils are pushing up fast out of doors now and two weeks in a light house is all the time you want. Spirea is a flower you want well out. People do not expect it to be a lasting plant and they want all the show they can get.

Azaleas differ very much in their time of flowering, and that you have doubtless looked out for. The early varieties, of which Van der Cruyssen is the best type, will need a cool, heavily shaded house, while the later varieties will take a good brisk heat for the last two weeks. You cannot expect to get all the plants in flower that you would wish to without a continual watchfulness and labor. Many moves and contrivances will have to be resorted to and it is wonderful what your fertile brain will think of if you have your heart in the business. Both the "heart" and "fertile brain" are used, of course, figuratively, as the heart has quite a different function and the brain's fertility could be better expressed by saying that a clear head and observing eye will be productive of healthy molecular action of the gray matter.

Excuse this psychological diversion. It's a relief sometimes, don't you know. But to be more matter of fact, let me conclude by saying that above all things that is inexcusable is to have green-ly on your plants when sold, or the odor of tobacco. I don't know of any plants that are in bloom for Easter that are at all hurt by a moderate fumigation, and do all the smoking that is necessary at least a week before the plants are to be sold.

WILLIAM SCOTT.

CARNATION TROUBLES.

Please tell me what makes my carnation buds blast. The buds all come soft like the sample sent but all are blasted and have been so all winter. The plants look healthy. Most of the soil is the same that grew a crop of carnations last year, with about two inches of fresh soil added and a wheelbarrow full of manure to each ten feet of bench five feet wide. The soil is alive with fish worms and there has been some gas in greenhouse from furnace. Temperature is to 50 degrees at night. Do you think I had better throw the plants out? The varieties are Portia, McGowan, Daybreak and Alaska.

H. R. B.

The carnation buds sent were so dried up that they were of no use in determining the cause of the trouble. According to the letter the conditions under which the carnations are growing are such that I am inclined to think there are several faults at the bottom of the trouble. In the first place there is no use trying to grow carnations or any other flowers in a house where there is more or less gas most of the time. It may have gotten strong enough to injure the buds when they were small and tender. The presence of fish worms is not conducive to good health and there is no excuse for any grower to have many of them around.

I do not approve of using the same soil two seasons on shallow benches, as it is very likely to be pretty well exhausted after the first season if the carnations make a good growth. The manure that was added would help but, some bone and lime or wood-ashes should have been added as well if it was necessary to use the old soil over again. I have seen old soil used again after it had lain outside exposed to the weather a year with good results.

Now, if I am right in my opinion there ought to be no trouble in getting these plants into fairly good shape again at this time of the year when they naturally make a strong growth and outgrow many other diseases. Sprinkle a good handful of slaked lime between each row and water in well to get rid of the fish worms and give plenty of air both day and night to allow whatever gas there is to pass out of the ventilators. In about ten days give a light dressing of bone mixed in soil, about a 5-inch pot of bone to each bushel of soil and put on about 1/4-inch thick. Keep the temperature about 50 degrees at night.

I would not advise propagating from these plants because it might possibly be some disease or light that is causing the trouble. Better buy new stock and while you are buying get newer and better varieties. McGowan and Alaska are not nearly as good as Flora Hill and White Cloud, and Portia is away behind Jubilee, Crane and America. Daybreak does fairly well yet and on some places it is still really fine.

If I had these plants I would throw them out and replant at once with young stock for next season. It is early, but they would well repay you for the early start, now while it is cool and they can become well established before hot weather comes. The red varieties especially would appreciate it.

The Easter Cut.

When this reaches you there will be only two weeks before Easter and every grower is anxious to cut as many blooms

as possible for that day and how we all watch the weather and the almanac and how we do swear at the weather man when he predicts rain for tomorrow, etc. Isn't it too bad that we florists can't make the weather? Don't force your plants to death with artificial heat if the sun fails to supply the warmth and light you need to open up the buds. A few degrees will not injure the plants, but raise the temperature gradually, a degree each night, etc.

If the weather is cloudy you can save up the blooms ten days, but if it is warm and bright you had better pick them right along up to a week before Easter and you will then have plenty of blooms to cut the latter part of the week. Easter is apt to be warm and pickled stock fares worse even than it does at Xmas, so be careful how you manage your cut, especially if you have to ship them.

A. F. J. BAHR.

ABOUT CARNATIONS.

While everybody's attention is directed to carnations I would like to mention one thing that I have not seen touched upon.

We watch the reports of the different growers in their trade lists and after a number of years' comparisons have come to the conclusion that the soil and conditions under which Messrs. F. Dornier & Sons grow most nearly coincide with our own. The notes and comments they make on varieties are nearly always what we would make on the same kinds which we have grown. The point I want to make is: If the grower of a small or medium quantity of carnations would make it a rule to read these reports carefully from year to year, after a few years he would find one whose conditions seemed very much like his own, then as a general thing he would be pretty safe in trying the new varieties that do well with this grower.

Very likely many are following this plan but I do not remember having seen it mentioned. It really saves one or two years' trial for the grower who is limited as to space and means to experiment for himself, and the smaller grower can not afford to try the novelties the first year at the fancy prices.

But, by the way, the high priced stock of the introducer or grower who makes stock a specialty, is often cheaper than low priced stock from others. I have had an example of this lately, getting poor, slim, weak, sickly stuff that was really dead at any price. I shall always think of that concern as trying to have too much stock to sell at bargain prices. Next time I shall not fail to order from the man who does not offer at a lower price than he can offer first class cuttings for, even if my pocketbook causes me to order a smaller quantity, for I would rather have a dozen good plants than twenty-five sickly ones.

Speaking of the Marquis, while we have not enough of it for a fair trial, still as it has gone so far, it has given us only two flowers per plant from Jan. 1 to March 16 and this is a very poor showing, even though the flowers are so nice when you get them. Of course we shall grow some another year and try to get better results by different treatment. But I agree with Mr. Baur that the introducers should give us more explicit directions when they first send out a variety.

Why does not someone report their record of cuts from different varieties? I

have been watching for them for some time but I no one seems to come to the front. I would really like to know what the good grower considers a good average.

R. E. S.

THE MARQUIS.

While the discussion waves warm over the merits and demerits of The Marquis it might be of interest to your readers to know of its behavior out here in the west.

It gives me pleasure to say that from the beginning to the finish The Marquis as grown here has been entirely satisfactory. Mr. Stuppy is the only florist here that grows this carnation in quantity. The plants are never planted out in the field, but are shifted into 4-inch pots and given cold frame treatment for six weeks. Planted in the house August 1st they began blooming October 1st, and have been at it ever since. Mr. Stuppy grows all of the newer varieties to perfection, but especially recommends The Marquis to florists who grow and retail their own carnations.

JOHN H. VESEY.

St. Joseph, Mo.

THE HOUSE OF WHITE CLOUD.

Referring to the engraving of house of White Cloud carnations that appeared in our last issue, Mr. N. Wiestor says it hardly does the house justice, as the photographer arrived shortly after 2,000 flowers had been cut from it. He adds that not less than 2,000 flowers a day have been cut from that house for thirty successive days.

Their carnations seem to be extra good keepers and to always have good, strong stems, and this is undoubtedly the result of the fact that they keep air on almost all the time and maintain a very low temperature. The houses are often as low as 38 to 40 degrees, and even lower at times. Nevertheless they get quantity as well as quality.

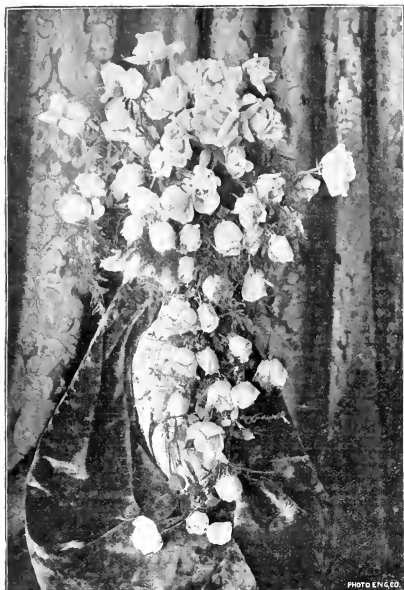

ROSES.

(Some General Remarks on Roses by Benjamin Durbec, American Rose Co., Washington, D.C., before the Chicago Florists' Club, March 13, 1901.)

It is fair, I think, to estimate that the average retail florist requires in his stock fully 75 per cent of white flowers. This applies with full force to roses. Today we have in general commerce but two white roses: Bride and Kaiserin. The Bride a sport from Catherine Mermet; the Kaiserin a seedling by P. Lambert of Germany. We were fortunate in being one of the pioneers in the introduction of Kaiserin.

Let us analyze the good and bad points of these two roses: In the Bride we have during winter a large, fine white bud, with fairly good foliage and free blooming, when well grown, but apt to come knotty and deformed in bad weather, and liable to have weak stems in the hands of any but the most skillful growers. This rose, however, becomes very small when the warm weather strikes it. It is a good shipper and a fairly good keeper, but flat and unshapely when wide open. It is somewhat of a cropper, but may be well classified among the best of the ever-blooming teas.

It must, therefore, be supplemented by a good white summer bloomer, and this you have in Kaiserin, one of the most beautiful of all roses. But Kaiser-

The White Golden Gate Rose.

ein is not a good shipper, nor is it a good winter bloomer except in far southern climates. It has a tendency to black spot, and it is not quite rapid enough in its growth, nor quite free enough of bloom. I might possibly add to these the White Manan Cochet, the use of which for out-door cut is developing in the East. With the two roses, however, the florist can cover the entire year fairly well.

Consequently, what the grower is in need of is a good all-the-year-round white rose, and this we are convinced from a five years' test will be found in the White Golden Gate. But let me give you our estimate of the qualities which a rose should possess in order to be a commercial florist's rose. It is very difficult to name in order of importance the many necessary elements; but if it had every other qualification and was a shy bloomer it would be utterly worthless to the commercial grower. I do not believe we ought to go outside of the strictly pure tea rose unless we are compelled to do so. Almost every hybrid tea retains too much of the spirit of rest which flows in the blood of the hybrid perpetual. But the tea rose is like you western florists, you hustlers of the Universe, you active, progressive elements of our profession, to whom I have come 800 miles to make my bow. Your Reinbergs and Bassetts and Washburns, your Wickers and Weilands, and the hundreds of others who within a decade have piled more florists' glass over the earth than

can be found east of the Alleghenies. Like you western florists, the tea rose never rests, and should be your hand maiden.

But to return to our estimate of the necessary qualifications of a white rose, and they are freedom of bloom, good shipping and keeping qualities, thick leathery petals, erect long stems, large flowers the year through, rapid but not soft growth, freedom from black spot, strong root action, fragrance, good color, no hybrid blood in its veins. These are the general and most important requirements, and they are rarely to be met with assembled in any one variety. Some of the most necessary of these qualifications can only be discovered by an investigation of the growing plant, by personal inspection and custody of flower and plant for a long period of time. Consequently in a competitive exhibit the scale of points fails to cover such vital commercial elements as the keeping and shipping quality, freedom of bloom, habit of growth, freedom from disease.

From the commercial standpoint freedom of bloom would seem to be entitled to the most points, with keeping and shipping qualities a close second. And this brings me to the point of emphasizing the necessity of close observation of the growing plants when forming judgment of a novelty rose. Take for illustration the scale of points formulated by the American Rose Society for novelties: Size, 10; color, 20; stem, 15,

substance, 10; foliage, 15; fragrance, 5; distinctiveness, 10; total, 100. As a commercial grower of roses under glass for cut flowers we will suppose the fact is proven to you that a certain novelty produces twice as many flowers during the period from December 15 to February 15 as American Beauty, but that it is neither more fragrant nor better colored, but is simply equal to American Beauty in all respects. I ask why those two elements should be allotted 15 points? Why in a white rose should color be assigned 20 points? This might be a correct proportion of points of color in regard to pink or red or yellow, but the line of demarcation in white is not a pronounced characteristic. When the Hermet sported into Bride what governed your judgment? Would anybody have grown Bride if it had been a shy bloomer? and yet that quality did not figure in the scale of points. It, therefore, seems as though the judges should not be barred from using their judgment, nor be compelled to pro rate the percentages according to a fixed standard.

The consideration of the Bride leads inevitably to the great distinction that should be made between a seedling and a sport, especially if the sport is from a standard commercial variety of many years' standing whose every good and bad characteristic is known to the profession. In the case of a seedling many of the defects may be concealed by the introducer. He may succeed in winning the whole gamut of gold and silver medals and certificates, and yet palm upon the purchaser a very unprofitable rose. The size, color, fragrance, stem, form, substance, foliage and distinctiveness may be of perfect standards, and thus yield 100 on the scale of points, *i. e.*: where will the grower be if the product of flowers is of the smallest? or the sleepy jade cannot be roused by any stimulating influences in winter; or if black spot skins off the 100 per cent of grand foliage, leaving nothing but the 100 per cent flower at the end of the 100 per cent stem?

Not so, however, with a sport from a standard variety, such as I have alluded to. You start out with a thorough knowledge of all its traits both good and bad. Thus we know that the Bride, like its parent, produces a very small flower during the month of May and to November; that it has a tendency to produce weak stems and much blind wood, etc. So with the White Golden Gate, it has the characteristics of the Golden Gate from which it sported five years ago; and those of you who grow Golden Gate know its qualities, both good and bad.

Perhaps a few historical words about Golden Gate, its characteristics, etc., may interest you. Golden Gate was introduced to the trade, I think, about 1890 or 1891, by Dingee & Conard of West Grove, Pa. It is said to have come out of Safrano crossed with Cornelia Cook, although there are some suggestions in the foliage of Niphet's blood. The characteristics of Cornelia Cook predominate in nearly every element of growth and bloom, although it reproduces much more rapidly than its parent.

It has a strong tendency to break from the base and these canes, if allowed to bloom unchecked, produce enormous flowers. For many years, however, we have treated these growths as you would a mum. When the shoot has reached a height of about thirty inches

we dis-bud by breaking off about four or five inches of the top. From five to six side shoots will then quickly break, as the flow of sap is very rapid, and the flowers exhibited here of the White Golden Gate are all from side shoots, or, as you say in physanthemum lingo, the terminal buds. Of course when I describe the Golden Gate I describe the White Golden Gate, for they are identical in every way except color. For our commercial purposes these buds are of ample size.

The result of dis-budding you will readily perceive is a very large crop of good standard sized flowers. The plants are grown on benches in from 21 to 3 inches of soil, top-dressed with a mulch half manure, half soil, twice during the season, and fed after the 1st of January with ordinary manure water. They are grown on their own roots, although Mr. Reuter, of Westely, K. I., and Mr. Pierson, of Cromwell, Conn., used grafts in preference; but I see no need for grafted stock when their own roots are so very vigorous. The Golden Gate has had a hard struggle to-day it stands the peer of any tea rose in commercial use. With this fact established, however, there must always be a limited demand in this country of high colors for the dainty porcelain coloring of Golden Gate; but the demand for White Golden Gate must necessarily be enormous, as it will very quickly displace all other commercial whites.

CHRYSANTHEMUM NOTES.

Propagating.

The cutting benches just now are kept in full swing propagating bedding stock and such like and oftentimes the earlier batches of mum cuttings are crowded in consequence.

It is a great mistake, and would be better by far to defer the propagation of the mums till later when much of the other stock will be out of the way. Overcrowding in the cutting bench is the reason why so much of the stock seen around in early spring is so spindly and wiry looking. Such stock never comes away freely with clean thifty foliage and stocky short jointed growth, which is the only kind of growth you want to get for best results.

If you have the space to spare in the cutting bench and the cuttings themselves are in good condition it is well to get in all the stock you can this month of the slow growing dwarf kinds: Bonnaillon, Jerome Jones, Glory of the Pacific and such kinds.

A new variety to America named Nellie Pickett that is being sent out this season is notably dwarf. We have plants of it that have been growing for weeks past and are not yet two inches in height. It is a lovely thing, and for side benches its dwarf habit is just the thing. Mrs. Barkley, an immense rose pink flower, is another very dwarf habit variety. Mrs. Barkley is "English, you know," and the largest flowers exhibited there the past season were of this variety.

In taking cuttings always be careful to select only the suckers that come up around the base of the old stem. These will always give satisfaction, while cuttings that form on the old stem will, nine times out of ten, begin to throw buds as soon as they begin to grow, and you will have to wait until they produce a sucker

from the bottom before they will make decent plants.

V. Monet is a variety that produces a bud any way, no matter whether you take a sucker or stem cutting, and the only way to handle this superb old variety seems to be to pot it up after rooting, and when a strong growth appears coming from the bottom let it go on growing and out away the original plant. Every variety that grows has its own little peculiarities and these must be noted and understood by the grower, who is looking for the largest measure of success.

Keeping the Stock Clean.

Always see that the cuttings are clean and free from any disease before putting in the bench. You may think, "Oh, it isn't so necessary as all that, the mum will grow out of a little leaf spot all right," and so on but it's just as easy to bring right as any other way.

Clean the cuttings of all aphid, black, green or any other color, and if you have any rust on your plants this is the time to get rid of it. A few spores left unnoticed on the young plants now will by next summer furnish enough to go all through your stock. The scientists tell us that the winter spores (or teliospores) of this disease will remain dormant all winter and will not germinate until the following spring. It may be so, but we have noticed this disease on some varieties every month in the year.

Whether you have any rust on your plants or not, it is always wise as a precaution to spray your stock at intervals throughout the early part of the year with a solution of potassium sulphide, half an ounce to a gallon of water. This solution, while not exactly conveying to the senses the perfumes of Arabi the blest, we have always found to be effective in destroying the spores, providing it is carefully syringed on the under side of the leaves. If the plants are in pots the most effectual way is to dip them in the solution. If the plants are very soft in their growth it may injure the extreme tips of the young leaves but they will soon grow out of it all right. This disease has never been so bad in this country as it has in Britain, our hot, dry summers not being so favorable to its development as the humid atmosphere of the "other side."

Exhibition Blooms.

A correspondent wishes to know how to get the largest number of exhibition blooms from a bench thirty feet by seven feet, using three different methods he has in view.

1. Cuttings rooted early in March and finally potted in nine-inch boxes, taking three shoots to a plant.
2. Cuttings rooted early part of May, planted eight inches by ten and kept to single stem.
3. Cuttings rooted early in June, potted into six inch pots, kept to single stem. Economy to be also a factor in the final results.

Unquestionably the most economical way and, to my mind, the best results would be accomplished by No. 2 method. The economy lies in the fact that the plants being planted out would not need nearly the water that the pots or boxes would, and, consequently, cost less to grow, not in the cost of the water, but the labor of applying it. We have grown splendid flowers in boxes, but not the

finest exhibition flowers from three shoots to a plant. The advantage of pots or boxes is that they can be moved around into another house if desired, but if the plants can remain to flower in the same house I would always plant out on the bench.

If your correspondent is going in for exhibiting he ought to have a small batch of plants in six-inch pots. While they will not make such large flowers as the single stems planted out, they will make a nice showing, and most exhibitors have a class as grown for such plants exhibited in pots as grown. The greatest number of flowers would be produced, of course, by taking up three shoots to a plant but such quantity is always at the expense of quality. BITAN BORT.

PANDANUS SANDERI.

I had the pleasure of seeing Pandanus Sanderi in its new home at Dreer's nursery, Riverton, N. J., recently and of hearing Mr. Eisele talk of his trip to Europe and this new Pandanus that he brought home with him.

It is beautifully variegated in green and gold on every leaf, the coloring being pronounced even on the bottom leaves. The foliage appeared longer and narrower than that of Pandanus Veitchii, and Mr. Eisele thought that in habit the new plant was distinct from the old, his idea being that the center leaves of P. Sanderi were less erect when first thrown up than those of P. Veitchii.

The coloring and general effect of this new Pandanus reminded me strongly of the variegated pineapple (*Ananas sativa variegata*), only there is a vigor and life about this plant which is lacking in the variegated pineapple. Mr. Eisele explained that the plants we saw were but a small vanguard, the entire stock being exported later; in time he hoped to send a big specimen plant to the coming rose show in New York.

Great credit is due the H. A. Dreer Company for securing this gem of the tropics, which has such a promising future before it. PHIL.

There has been some discussion of late about the description of this plant, but after the discussion is over the fact remains that the plant in question is a splendid thing and is bound to have a phenomenal sale. For brilliancy of coloring Pandanus Veitchii is simply nowhere alongside of it.

I saw a large batch of plants in Messrs. Sander's nursery on Dec. 24 last. It was a dreary, foggy day and coming into the house where P. Sanderi was growing it seemed by contrast a blaze of sunshine. I thought at the time it was one of the handsomest plants I ever saw. They have quite a number of novelties in the plant line but nothing in my opinion like the plant in question, Pandanus Sanderi has certainly come to stay.

CHAS. H. TOITY.

LILY OF THE VALLEY.

BY H. N. BURN.

(Read before the Chicago Florists' Club, March 15.)

In response to your request I have pleasure in speaking to you about this particular flower. As most of you know I grow some of them all the year around. I have had good success the last few sea-

A house of the new Pandanus Sanderi.

sons, though I did not grow very many lately as it was not satisfactory. In our trade papers there have repeatedly appeared very good articles on forcing lily of the valley from prominent men and I would rather confine myself tonight to the stock to be used for forcing. This is undoubtedly the most important point in forcing valley successfully and too much care cannot be used in procuring the right stock.

Pips to be used for early forcing should have been grown in light, warm soil; it is immaterial whether a sandy soil or a good cultivated garden soil. Pips grown on a damp, cold place, or in a heavy loam, should be used only for late forcing.

Good pips for early forcing should be strong, solid, run even, and must have plenty of fine, long, white roots that start right from the pips. These signs will assure you that the pips have been well taken care of and cultivated. Stock like that can always be depended upon to give good satisfaction providing they get proper treatment.

For late forcing I use stock grown on heavy soil. The roots are shorter and coarser, but the pips should be strong and evenly assorted. Here I find trouble sometimes, particularly when the season was rather moist. The lower bells are too far advanced in the pips and in growing they fade before the valley is fully developed. Most of the time I find this trouble with the strongest pips grown on heavy and damp soil. It is therefore advisable to look upon such stock, as well as unevenly assorted pips, with suspicion. My shipper keeps me informed as to where the different kinds

were grown and how the season has been as this is very important to know.

Mr. August Jurgens was to have read a paper on the same subject but had failed to prepare anything. When called upon he said that an important point in valley forcing was to heel the pips into soil just as soon as received and not allow the pips to dry out. He said that to get really first class valley it must be grown cool and given plenty of time to develop. If forced fast you get stem but at the expense of the flowers. The flowers must have time to develop and this process cannot be successfully forced. The temperature varies, of course, with the season. His early valley he gives 85 to 90 degrees, but later crops get only 75 to 80 degrees. He had found that the most expensive pips were the most profitable to force as the poorer average of flowers from the cheaper pip made them most costly in the end. Every batch must be treated differently and he learns something new every year.

He displayed a bunch of very fine valley that excited the admiration of all. These were from pips put in February 7. He was pessimistic, though, as regards the profit in forcing valley. His experience had been that the demand was very uncertain and irregular and that the demand was generally strongest when he had but a few and discouragingly light when he had a good lot.

Mr. Buetner took another fall out of the retailers for not encouraging the sale of valley. They seemed never to buy it for regular stock, he said, but bought it only when it was specially called for and then they would want a

big lot and wondered why the grower couldn't supply it. He said there was too much of a tendency among the retailers to hunt for flowers that would cover a big space in a funeral design and that they would better spend some of their time in catering to and developing a taste for something better. He took the bunch of valley, spread it out loosely and said that such a bunch placed on the counter would sell, but that a much greater demand would be developed if the retailer were to make it up in some pretty, dainty combination. He said that the average retailer took the bunches just as they came from the grower, jammed several of them together in a crude looking jar and then was disgusted when customers passed it by.

AN EMPLOYEES' ASSOCIATION.

EDITOR FLORESTA'S REVIEW:

I have read with much interest the paper read by Herman Knope before the Detroit Florists' Club and printed in your paper. He certainly brings out some points worthy of consideration. But how to improve the situation is the question.

Would it not be a good idea for employees to have an association, admitting only good men and excluding all the skates and big mouths and get together on their own account. I am sure they could advance their own interests and those of honest employers too, by an organization if broad enough in its aims and character.

How would it do to try to get together at the time of the S. A. F. convention in Buffalo next August? I would make an

effort to attend the meeting if one should be arranged for next week, willing to sign my name to call it a session of fifteen others will do likewise.

Or, if this isn't considered desirable, why couldn't we form local organizations and then send delegates to Philadelphia to perfect a national body of education? I hope the REVIEW will give space to this and to a further discussion of the matter.

EMPIRE.

[Certainly the suggested action could do no harm and might accomplish much good. We are perfectly willing to print further communications on the subject providing they are brief and pertinent. Ed.]

PHILADELPHIA.

The Market.

The cut flower market has continued exceedingly active for the season. Good stock is in demand and some things were actually scarce early last week. Later in the week white carnations were much sought after, the price stiffening a little on the latter in consequence. John Wanamaker's "Silver Jubilee" was thought to be partly responsible for this shortage in white, as he used carnations of that color freely at his store. But the brisk demands continued after the "Jubilee" was over. Speaking of white carnations, it is said that the bulk of the stock grown around here is still "Lizzie McGowan." This is rather surprising, as one hears chiefly of the novelties.

Violets are awfully plentiful, the street being actually blue with them at times. Bulbous stock is hardly so plentiful; it moves fairly well, but the margin of profit must be extremely small at prevailing prices.

Quotations are as follows: Beauties, short, \$1.25 to \$1.50 a dozen; medium, \$2 to \$2.75; fancy, \$4 to \$5 (this grade goes slowly); Teas, \$2 to \$3 for small, the latter figure for white; specials, \$8 to \$10. Carnations, fancy, \$3 to \$4, a few \$5; ordinary, \$1.50 to \$2. Violets and bulbous stock remain unchanged.

Easter Outlook.

The outlook for Easter is excellent. There will be more plants and better plants than ever before, and that is saying a good deal; a decided improvement since the advent of the disease in lilies. The bulk of the stock will be Japan grown longiflorums. Our growers are learning how to do them now. The plants are taller than last season, about 3 to 3 1/2 feet high, and the flowers white not quite as large as the Bermuda grown, are very much finer than I have seen them before. Another point is that the plants average more flowers to a stem than was generally seen in the past. Taken all in all, I think our crack retailers can once more handle lilies with satisfaction. But they are not going to be very plentiful, and the wise dealer will pick out his stock in time. It won't pay to wait this year.

Crimson Rambler is another strong item on the Easter list. This rose is no longer a novelty; it is, however, a really good thing and it in some places better done than last year, the plants being more shapely and very well set with buds. Azaleas, genistas and spiraea promise well. It is a little early to speak with certainty about deutzias, and the same is true in a different way about

hydrangeas, for while deutzias must be just right in development, hydrangeas must be just right in color to prove quick sellers in the critical market of today. There are lots of other good blooming plants, but these, with the bulbs, form the staple articles that most interest our growers and retailers.

Various Items.

The effect of the good winter's business in cut flowers is beginning to appear at Chestnut Hill. John Burton is about to erect a range of glass (that is the up-to-date expression) on ground near his present houses. He proposes building six houses, each 25x150, to be heated by steam. The houses will be devoted to growing roses for cut flowers.

H. H. Battles has closed a contract for two houses, each 25x175 feet, with an 8 foot north side propagating house and a shed. This plant is to be erected on Mr. Battles' place at Newtown Square, and it is understood will not be devoted to growing standard varieties of cut flowers, the plan being to grow some of the things a first-class retailer requires and that are sometimes difficult to get. This information should reassure the rose and carnation men, but the growers of asparagus may not be so safe.

Henry Faust, of Merion, has a fine lot of Japan grown Liliun longiflorum.

George Anderson has a house of Ulrich Brunner that are thought to be just right for Easter. The plants are two years' bench grown and are in fine shape. It is the only house of this rose on the place.

John Walker and George McLean, who started in business last fall at Youngstown, Ohio, are encouraged by the result of their first winter's work. Their store has done well and the greenhouses will do better when they can reap what they sow instead of what somebody else sowed.

William Berger, of Germantown, is erecting a show house in the rear of his store. This greenhouse is to be ready for Easter.

Joseph Heacock is cutting some superb White Cloud that are bringing \$4 a hundred.

In honor of St. Patrick's day much shamrock was seen, some of it in quaint little pans shaped like a shamrock leaf. One of the department stores gave away a large number full of these little clover-like favorites. You wrote your name and address, or somebody else's name and address on a slip and the lucky people were to have a pot of shamrock sent to them.

William J. Moore is and has been receiving very fine Beauties and Maids from Burton's greenhouses, William Murray, manager.

Some floral work went from this city to the funeral of ex-President Harrison.

PHIL.

ST. LOUIS.

The Market.

The market this week seems much better than last week. The overstock is not so great as it has been except in bulb stock which remains about the same. The weather is fine and conditions are ideal for producing quantity and quality.

The topic for the present is Easter. From all appearances there will be an abundance of stock, both in plants and cut flowers, to supply the demand.

Priees are easy in most lines. Such varieties as Meteors, Brides, Maids and Golden Gates are from \$3 to \$6; Perles and Woottons, \$2 to \$4; Beauties, select grades, are \$3 to \$4 per doz., and from that down to 50 cents per dozen for shorts.

Carnations are quite plentiful but in great demand; white and pink head the list and are much the best sellers. Fancy stock still brings \$3, the bulk, though, is sold for \$2 and a few at \$1.50.

Violets also seem quite steady in demand but prices have not recovered; the best stock goes for \$2.50 per 1,000 but the bulk of them go for \$2. Bulbous stock remains about the same as reported in last issue; still very plentiful and very little demand for it. Smilax is somewhat scarce. Adiantum is in good demand but stock is poor.

Club Meeting.

The March meeting of the Florists' Club was held last Thursday afternoon and was fairly well attended. President Guy opened the meeting at 3 p. m. with 18 members present. This was our mixed cut flower meeting, but only a few made exhibitions. R. F. Tesson won first prize for a fine vase of Ethel Crocker carnations; F. J. Fillmore, second, for a vase of mixed roses; Dr. Halsted, of Belleville, third, for a vase of well-grown mixed roses. Dr. Halsted also showed a vase of sports of Mrs. Bradt. The American Rose Co. of Washington, D. C., showed a fine vase of their new rose Ivory which was received in good condition and was much admired. The rose was awarded the club's certificate of merit.

Rudolph Wind and Robert Scott made application for membership.

After some discussion it was decided to have a show this year and the president appointed the following committee to take charge: J. J. Bencke, Fred Meinhardt, C. C. Sanders, R. J. Mohr and George Windler. It was decided to discontinue having monthly flower shows for prizes. Mr. Robert F. Tesson read his essay on "The Cultivation of the Rose Today as Contrasted with Ten Years Ago," which was very instructive to the members and was received with thanks.

The committee on World's Fair was appointed as follows: Fred C. Weber, R. F. Tesson and J. J. Bencke. The committee is to see the World's Fair officials so as to get recognition during the fair.

Henry Barning and Carew Sanders postponed reading their essays until next meeting. This will make four essays for the April meeting, as follows: "Bulb Stock and How It Should Be Grown to Make It Profitable," by E. W. Guy; "How to Grow Profitable Pot Plants," by Carl Beyer; "Shrubs for the Florist," by Carew Sanders; "Best Method for Wholesale Cut Flowers," by Henry Barning. The next meeting will be held Thursday afternoon, April 11, at 3 o'clock.

J. F. Ammann is a candidate for mayor of Edwardsville, Ill. Fred is a good hustler and will no doubt be elected, at least we hope so.

E. W. Guy, Dr. Halsted and Henry Emanuel of Belleville, William Wintner and Fred Ude, Jr., of Kirkwood, J. F. Ammann of Edwardsville, and S. S. Skidelsky of Philadelphia, were visitors the past week.

Mr. William Busche, the landscaper

A Group of Funeral Designs.

gardener, is laying out the private place of Fred Kole at Venice, Ill. Mr. Kole is a wealthy banker of that place and is sparing no expense in putting the place in first-class shape, and he has the right man in Mr. Busche.

J. J. B.

FUNERAL DESIGNS.

The accompanying engraving is from a photograph of a group of designs used last October at the funeral of the manager of a large department store in Chicago, and it shows that the set design has most decidedly not yet passed away. In fact, some florists note something of a revival in the call for large set pieces at certain funerals.

Many of the designs seen in the group were arranged by the Geo. Wittbold Company, Chicago, and to them we are indebted for the photograph and the following facts regarding the designs:

The loving cup was four feet high, the outside all white roses and the inside yellow at the rim and solid pink below that, to represent wine in the cup. The handles were of carnations. The price paid for this was \$50. The heart was made solidly of Bride-maid roses and the price was \$30.

The broken column was seven feet tall, the column being of Bride roses and the garland of violets. The broken piece of the column appeared on one side of the base, while the other was filled with sego palm leaves and a bunch of roses. The cost of this piece was \$35. The open book was of carnations, with Perle roses at the edges, and the lettering and the

pen were in violets. It was to represent some book kept by the deceased and indicated the last entry.

While Messrs. Wittbold are not prepared to say there is an especially noticeable increase in the call for set designs, as the great bulk of the funeral arrangements they make are simple bunches, yet they have had a large call at times and feel sure the design still has a strong hold on popular favor. One thing they have noticed is an enlarged use of decorative plants at funerals, all now requiring at least a few palms and many ordering sufficient for quite a decoration.

BUFFALO.

I forget whether March came in like a lamb or a lion, but it's acting now like a Texas steer, and wind and mud and snow and rotten ice and occasionally a little sunshine is served up to us regularly in the course of 24 hours. An early dry spring would have been a great help to the Pan American. If, however, April the 1st finds frost entirely gone and the ground dry, all will be well.

There is not much of the dullness of Lent felt in this city and on fine days we find business quite fair. Flowers are quite plentiful, especially violets. A good many are sold but it does not keep down the cut.

Mr. C. F. Christenson has had for the past two months a grand bed of mignonette, a big lot of it and spikes two feet long. It has paid well, as most anything does when well grown. It is in six inches of soil on a broad middle bench of a very

light house and a night temperature never over 45 degrees at night.

From present indications lilies are going to be rather scarce. There are blocks of a few hundred here and there but in many establishments there will not be one. So I look for a lively demand. In other popular Easter flowers there seems to be enough to go around, although we do confidently expect that the coming Easter will be a great one.

We have a good many visitors, rather more, naturally, than ordinary seasons, and most of them take advantage of their being in town and have a look at the Pan-Am. Mr. Van Zanten was here and a very jolly young man who represents Messrs. Hageman & Meyer, and young Mr. Ed. Fancourt spent a day on his road home to Philadelphia, for a few days' holiday, and doubtless there were several more that we had not the honor to meet.

On Thursday next the club holds its annual election and there is likely to be a lively contest for the several offices for they will be positions of honor, but by no means soft jobs, for the coming summer, as every man will have to do his duty and there will be an abundance of duty to do.

Mr. W. J. Palmer started last night for the grand aristocratic, gilt edged and doubtless magnificent New York rose show.

W. S.

If you have any stock to offer the trade do not fail to have an adv. in our special spring number, to be issued next week.

BOSTON.

Trade Conditions.

The old caution to "Beware the Ides of March" seems to need as much attention on the part of Beantown florists as in the days of the laurel-crowned Cæsar. Another broken week. Probably fairly satisfactory to the pink and white rose men who sold copiously of their wares even if at a low figure; fairly so to the pink carnation men as good flowers were a little scarce in their boxes and consequently brought fair prices. The double violet men wore a puzzled expression; the single violet men almost a pleased one because they did a little better than for a month or so. The bulb goals men also softened their haggard expression to a slight extent but the red rose men wore faces as long as the stems of their roses. Bushels of fine red roses pointed into the city but for some unknown reason the retail call for them almost disappeared. The arrival of larger lots of Brunner's also complicated the situation. Is it not remarkable that in the long run the Exeter Rose Company of New Hampshire, can quite successfully compete with warmer states on red roses? While perhaps a bit behind them during a couple of the coldest months, yet during the remainder of the year it is nip and tuck, and their present output handled here by myself, is not surpassed in any respect. But they are the only New England growers who thus far have made anything like a permanent success of red roses of any kind except Jacks, their success with American Beauties being distinct.

"A Waverley Novel."

Unless you think you can adequately describe Jordan & Man's business in a one-story ink building do not criticise me for a sham structure about the establishment of E. N. Pierce & Sons of Waverley. But I went out there and since the electric free transfer system carried me about twenty miles very cutely for a nickel I think I may claim I was electro-"cuted" for that distance. They have 125,000 feet of glass, largely used just now for the development of 60,000 Easter lily potted plants estimated to carry 360,000 buds and blossoms. They claim it as the largest collection of the kind. Who dares dispute it?

Mr. Pierce and his two sons seem especially adapted for the work, each to his own department. Mr. Pierce is chief of the horticultural branch with fifteen assistants. One look at the products in the city and another at the magnificent crop now coming, proves his efficiency, but I find an hour's walk with him from house to house even more demonstrative as well as instructive. But his success with lilies lies as much in the completeness of his plant as anything. Twelve huge houses of them, each being run at a different temperature, and those fifteen men, and a team or two, busy continually changing the plants back and forth into different houses in order to hasten or retard the growth of each. Very simple, you see, when you have the twelve houses, the fifteen men and the teams, especially with the addition of the tracks laid in the houses and the narrow truck that runs along them and carries fifty pots with a push of one

hand. Since this crop will be out and away soon there is a stray underriment of preparation for the next filling of the houses which will consist largely of sprouts and stocks for Memorial day, after which comes the huge chrysanthemum crop. A feature of the lilies is their splendid foliage, the whole length of the stem obtained by giving them plenty of room, for which purpose the pots are put further and further apart as the plants are handled day by day, good pink plants and mignonette being ruthlessly thrown out to gain the extra space needed.

The son, Allen, is too well known in his capacity of city salesman to need more than passing notice. His customers have found that besides being a very pleasant man to deal with, his goods are always as represented and the price is right. And why not? It costs less to grow a good plant than a poor one.

But the work of the other son, Bert, is not so generally known. His mechanical and electrical achievements are almost marvelous, two or three of his ideas being patented. He knows every inch of the seven miles of piping on the place, because he put it in, bending the two and four-inch pipes in lots of places where others use elbows. The four big boilers are only toys to him. They formerly needed all four, but the new eighty-five foot chimney makes one big fellow do it all, even in the coldest weather. His very latest, is the installment of an automatic pump that assists the return of water to the boiler immensely. By his own device if the night fireman neglects the temperature, a bell rings in his bedroom and by the same device he can call that functionary. By another device a call on their long distance telephone sounds a gong that can be heard half a mile. His stock of pipe fitters' tools is complete, his blacksmith shop and machine shop perfect, lathe and all, with a twenty-five horse power engine to run it, with other machines, including one for cleaning small pots as fast as two men can throw them at it.

There has been a little fear that the general lily crop for Boston would be a little too late for Easter but with the sure arrival of the crop of this establishment I think there will be no trouble.

J. S. MANTER.

PITTSBURG.

The Pittsburg and Allegheny Florists' and Gardeners' Club is a pretty lively institution, and it has bright, pithy, well-attended meetings. It does not have set papers or essays because it reasons that its members are too busy men to prepare written papers; further, many of its best growers and cultivators are so unaccustomed to essay writing that the preparation of a paper would be such a burden as to scare them away from the meetings rather than induce them to attend them. But all come primed to tell what they know if they are asked to, see what is on hand, and find out all about what their neighbors have seen, heard and are doing. And there is an exhibition of cut flowers or plants at every meeting, and these subjects on the table are the foundation of the evening discussion, for every plant or bunch of flowers is taken up and commented on.

At the last meeting, Thursday evening, 14th inst., were a large bunch of

splendid specimens of the White Golden Gate rose sent by the American Rose Co., Washington, D. C., and a bunch of the same variety that had been cut for a month before being shipped. Its fine fragrance was noted by all and its thick, substantial petals evidenced its excellent keeping qualities. It is an ivory-white form of the Golden Gate rose. David Fraser, gardener to Mr. H. C. Frick, finds that Golden Gate is the best growing rose he has, and his people like it better than any other variety. Now he will also grow the white one. Some very fine Brides and Bridesmaids were contributed by Mr. Fischer, a local grower. They were from three years' planted stock on benches. The top soil is removed each year and replaced with fresh earth. While this plan works admirably with Mr. Fischer, others preferred annual planting.

John N. May, Summit, N. J., sent a superb lot of Olympia carnations and of a beautiful bright pink seedling, No. 22, which has a pronounced clove fragrance. The Olympias were much admired and the president told that he had seen them growing at Summit ten days before that, in a triple span house, and what a grand sight they were for vigor, thrift, compactness and productiveness. But Mr. Bardsolph and others of the large decorators said that only a limited number of striped carnations could be used in Pittsburg, the people preferred self colors. Mr. Fischer showed a fine lot of the Lawson and praised its behavior warmly. It was thrifty, prolific and a good keeper and capital seller. But Mr. Clark remarked that in decorations its color required a full decoration of the same tint; in this respect it was unlike the Marquis, which could be used with most anything. In Pittsburg, however, so far, it has been impossible to get enough of either of these varieties from the local growers to supply the demand. Some other growers showed bunches of fine flowers. Several of the florists paid Fred Burki the compliment that his house of White Cloud was unsurpassed anywhere east or west. Both Mr. Burki and Mr. Blind gave their impressions of the carnation meeting at Baltimore and the good things they saw there and about New York.

Talking of Harrisii lilies, James Murdoch said that he didn't have 10 per cent of diseased bulbs this year (Mr. M. has been in the Bermudas and had an eye to selecting for himself), but John Bader declared that he (John) didn't have 10 per cent of good ones. More than that, John urged, he had disease in the Bermuda longiorums, and the Japan longiorums showed such a mixture of types as to indicate that they had been grown from seed. Mr. Murdoch said that under favorable conditions Bermuda Harrisii will bloom the first year from seed. Mr. Reiman declared there was a big fortune in it for the man who would go beyond the first line and grow Harrisii lilies from seed or any way else, he pleased if he could get them absolutely free from disease. "Yes, you bet there is," exclaimed John Bader, "and I'd pay him big money for his bulbs and glad to get them." Neil McCallum, of Wilmerding, but formerly of Australia, said that where he was at the antipodes they didn't have the lily disease, and asked if the bulbs couldn't be grown there for the American market, because of the reverse of seasons, or may be a thoroughly clean stock might be obtained from there for

cultivation and propagation in the northern hemisphere.

The president called attention to the disease of Narcissus-Hemlock in Holland and the sad havoc it was playing among the bulbs of that variety. Mr. Price told that one of the nicest things he had this winter was a lot of Florentine irises. He grew them in pots all last summer, ripened them early and gave them a good rest. They had three to four big flowers to a stem, but the color of the blossoms was a little lighter than on flowers out of doors. Mr. Fraser spoke of having a fine lot of Iris Sostianus in bloom in pots.

Eleven new members were proposed for election. P. A.

Cut flower trade since Lent came in has been rather quiet, except for funeral work, of which there is a good deal to do. The death of Hon. C. L. Magee made a demand for all white flowers to be had; very many extra large pieces were made, some being very handsome ones.

Blind & Hoffmeyer are cutting the best roses now; Burki the best carnations.

The Jones underfed stock which Burki had installed under one of his boilers this winter seems to do its work. Burki says he is pleased with it now.

Lord & Burnham Co. are getting out material for two iron houses, 28x400 each for the Pittsburg Rose Co., at Bakerstown station, of which Burki is at the head. They are to be planted with roses as soon as finished. BAER.

CHICAGO.

The Market.

Trade conditions are much the same as last week. Business is good on the average but demand is spasmodic and a good day is apt to be succeeded by a poor one. There is a trifle firmer tone on carnations, especially whites. The range is still \$1.50 to \$3, with \$4 for fancy. Roses still range from \$4 to \$7, with the majority at \$5 to \$6. Violets and bulbous stuff are still dragging and as a rule have to be cleaned up at low figures. All are looking forward to a big Easter business.

The guessing as to the supply of lilies for Easter is still going on. It is evident now that there will be a shortage but no two are agreed as to how great a one.

Club Meeting.

At the last meeting of the Florists' Club, Mr. Benjamin Durfee, of the American Rose Co., Washington, D. C., displayed two large vases of fine blossoms of his new rose, White Golden Gate. They were much admired and were examined with great interest by many rose growers present. A committee consisting of Messrs. E. Buehner, Geo. Collins and J. S. Wilson, was appointed to examine the blossoms and report and they did so, recommending that the club's certificate of merit be awarded, which was done. They reported the rose as practically identical with Golden Gate except as to color.

Mr. Durfee favored the club with some remarks on roses, which will be found elsewhere in this issue. The paper by Mr. H. N. Bruns, with discussion by Mr. Aug. Jurgens and others, will also be

found in another column of this issue.

The program of the next meeting to be held April 5, includes two papers by "Hardy Herbaceous Flowers Suitable for the Cut Flower Market," one by G. Swenson and another by J. F. Hawkes.

Various Items.

The three Pochlmann brothers are to gether again. Adolph has closed his store at 55 Wabash avenue, and his stock is now being handled by his brothers, pending the completion of the organization of the Pochlmann Bros. Co., which is being incorporated with a paid up capital stock of \$300,000. The new company will control both the big places at Morton Grove and will have over 200,000 square feet of glass to draw supplies from.

Wieter Bros. are cutting some fine Triumph carnations and have a big crop coming on. It has a fine, strong stem with them. They have had no trouble from stem rot.

Mr. C. M. Dickinson returned from the east Wednesday and Mr. C. L. Washburn is expected back from North Carolina next week.

George Piegras has filed a petition in bankruptcy and his business is now in the hands of the courts.

Bassett & Washburn will soon build at Hinsdale a range of new houses containing 40,000 square feet of glass.

Last Tuesday the Grand Rapids train due here at 7 a. m. did not reach the city till 2 p. m. and as a result a lot of Michigan flowers reached the market very late that day.

Heim Bros. will this season add 25,000 square feet of glass to their range at Blue Island.

It is evident that the building of new greenhouses has not yet been checked by the prevailing high prices of glass. During the last ten days the John C. Moninger Co., this city, has received orders for express material for new houses that will require a total of 224,200 square feet of glass to cover them, and this is in addition to many other large orders.

MADISON, N. J.

Wednesday, March 13, was carnation night with the Morris County Gardeners' and Florists' Club and some magnificent flowers were staged. C. W. Ward, Cottage Gardens, Queens, had on exhibition a large collection including Roosevelt, Harry Fern, Morning Glory, Joseph Manley, a fine scarlet, Golden Beauty, Marquis, Viola Allen and Novelty. These flowers traveled in fine condition and the entire collection was deservedly awarded a certificate of merit.

J. L. Dillon sent a fine lot of Queen Louise. This variety also arrived in excellent condition and was much admired. Peter Fisher sent a large vase of his matchless Lawson. It is needless to praise this exhibit for everybody knows the quality of Fisher's Lawsons. John N. May exhibited Olympia in good shape and seedlings No. 2972 and 2209. One of these seedlings, but I forgot which, is a lovely shade of true pink, the other a very large white.

Of the local lights W. Duekham staged vases of Glacier, White Cloud, Bradt and mixed varieties, all of which were excellent. A. Herrington exhibited Lawson, Olympia, Crane and Marquis, all

very fine. Lawson, Portland, D. Shannon had a vase of unusual 13-ribbed roses with three feet 3,000, and W. Charlton a novel vase of roses, Brides and Maidens.

John N. May was the essayist for the evening. He gave an informal talk on carnations as seen at Baltimore and elsewhere and reiterated the statement that it didn't pay to grow any but the very finest flowers, mentioning where he had seen Scott's sold for \$5 a thousand during the past week. In his opinion muleing the beds at this season was the cause of the flowers splitting their calyxes. A hearty vote of thanks was accorded the lecturer for his address and also the gentlemen who had been good enough to send their flowers for the club's inspection, notably Messrs. Ward, Dillon, Fisher and May. C.

HARTFORD, CONN.

The annual meeting of the Florists' Club was held March 12 and officers for the ensuing year were chosen as follows: T. J. McRonald, president; W. W. Hunt, vice president; J. F. Coombs, secretary; Theodore Wirth, treasurer. The board of trustees elected include the above named officers, also George Osborn, John Coombs, and J. F. Huss.

After the business meeting there was consideration of the subject of carnations and other flowers. George S. Osborn showed several varieties of carnations, which included Marquis, Bradt, Lawson and Red Bradt. Some of the blossoms measured from three to three and one-fourth inches. Mr. Osborn gave an interesting talk as to the best growers, the best sellers and as the most profitable to grow. Mr. Huss talked on orchids and other flowers.

At the close of the meeting a vote of thanks was extended to the entertainment committee, also to Messrs. Huss and Osborn. There is some talk among the members of forming a bowling team.

AMERICAN ROSE SOCIETY.

The second annual exhibition of the American Rose Society was held in New York, Tuesday, Wednesday and Thursday, of this week. A full report, together with views of the display, will appear in our special spring number, to be issued next week.

FLOWER HOLDER.—Simon Weiler, of New York city, has patented a flower holder that can be attached to any part of the dress to hold a bunch of flowers in any desired position. The holder comprises a bar having a fastening device by which it is secured to the dress. A pin on the bar extends approximately parallel to and in the direction of the length of the bar to receive the stems of a bunch of flowers. Ribbons on the bar can be passed in front of the stems and tied in a bow.

OAKLAND, MD.—H. Weber & Sons contemplate adding 10,000 feet of new glass next summer.

DIXON, ILL.—The greenhouse of Christian Wuhl was destroyed by fire March 5.

DON'T MISS having an adv. in our special spring number to be issued next week, if you have anything to sell to the trade.

CATALOGUES RECEIVED.

S. T. Danley, Macon, Ill., wholesale price list of rooted cuttings and pot plants; E. H. Hunt, 76 Wabash Ave., Chicago, preliminary list of seeds and bulbs; F. Dorner & Sons Co., La Fayette, Ind., descriptive price list of new and standard carnations; Theo. Bock, Hamilton, Ohio, list of choice chrysanthemums for spring at 1901; C. Lanke Bros., Portland, Oregon, descriptive rose list; S. E. Hall, Cherry Valley, Ill., illustrated price list of nursery stock; E. H. Reich, No. Alton, Ill., new varieties of fruit and ornamental plants; Daniel & Hunter, London, Ont., seeds, plants, bulbs, etc.; John Charlton & Sons, Rochester, N. Y., list of hardy plants; Graham Bros., Ottawa, Ont., catalogue of high grade seeds, plants, bulbs, etc.; Geo. B. Moulder, Smith's Grove, Ky., catalogue of choice water lilies; F. H. Bonford, Charlotte, Va., catalogue of wild flowers, ferns, trees, etc.; T. R. Watson, Plymouth, Mass., price list of hardy stock; R. & J. Farquhar & Co., 6 and 7 So. Market St., Boston, Mass., price list of seeds, bulbs and plants for florists; R. Vincent, Jr., & Son, White Marsh, Md., price list of vegetable and other plants; A. B. Davis & Son, Purcellville, Va., illustrated catalogue of roses, plants and bulbs; Hoopes Bro. & Thomas, West Chester, Pa., a nicely illustrated, descriptive catalogue of ornamental trees and shrubs.

Rock Island, Ill.—Ludwig Stapp has arranged to put up 9,000 square feet of new glass at an early date.

SPRINGFIELD, ILL.—Bell Miller will soon erect a range of houses containing 18,000 square feet of glass.

GIBSON CITY, ILL.—Swab Peterson will soon erect 40,000 square feet of new glass.

You will miss it if you do not have an ad. in the REVIEW's special spring number, to be issued next week.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head. Every subscriber is entitled to a free advertisement not exceeding 35 words in any issue desired during the year. If the advertisement exceeds 35 words, send at the rate of one cent for each additional word.

FOR SALE.—Some extra good second hand 3-inch pipe at a low price; also some 1-inch; guaranteed sound. W. H. Salter, Rochester, N. Y.

SITUATION WANTED.—By first-class grower of S. roses, carnations, violets and mums. Address Illinois, care Florists' Review.

WANTED.—A good, all-round florist; carnations a specialty; capable to take full charge; state wages expected; single man preferred. Address W. A. Rowlands, 108 Genesee Street, Utica, N. Y.

WANTED.—At once a man to work in greenhouse where a retail business is done. Must be a good worker, sober and agreeable and one who will learn in the family. State wages and give references in first letter. H. S. Haker, Warsaw, N. Y.

WANTED.—A good all-round florist, must be sober and industrious, a good grower and designer. Wage \$10 a week, with room and board. Don't answer unless you can come at once. S. Wachenheim, Vicksburg, Miss.

FOR SALE.—Greenhouse—2,000 feet of glass, brick for 3000 more. Windmill, large tank, 2 jets, room cottage—5 rooms, barn. City 9,000 population, 10 miles to Chicago. Splendid location for florist business. Address 2006 N. Chatham Street, Racine, Wis.

FOR SALE.—Fine greenhouse property in Southern Wisconsin. High population, 1,000 feet of glass, 5 minutes' walk from post office, street cars pass the door; residence connected with office; done a splendid business. For particulars, address R. care Florists' Review.

POSITION WANTED.—This spring, near Boston, by an up-to-date grower, in a warm, foreman, on a good clean place; strictly temperate; need had large experience with roses and carnations; good wages required; married; age 29; one child. Give full particulars to "Englishman," care Florists' Review.

WANTED.—A good, bright lad, 18 or 19, that has had experience in flower store. Answer, with reference, K. C., care of Florists' Review.

SITUATION WANTED.—As working foreman by a grower of flowers and general stock; German, age 32 single; life experience; best references; state particulars. Address Florist, 10th St and 1st Ave., Williamsbridge, New York City.

WANTED.—I want a good boy, 16 or 17 years of age, to learn the trade of one who has had a little experience in the business. Address W. N. Drake, 904 Chicago Street, Kenosha, Wis.

FOR SALE.—Or to let for a term of years the Mountain Villa Conservatories, containing about 1000 ft of glass well stocked. Address Fox 24, Sharon, Mass.

WANTED.—Florist to take charge of 10,000 feet of glass where carnations and violets are grown. Wages on shares. Single man preferred. Eliza R. Whitson, Atglen, Pa.

WANTED.—Young man who understands roses and carnations to take charge of a range of houses. Must be able to take an interest in his work. Write Geo. A. Kuhl, Pekin, Ill.

WANTED.—Two good rose growers. Apply to Peter Reuber, 31 Wabash Ave., Chicago.

SITUATION WANTED.—By a first-class grower of S. roses, carnations, violets and general stock; competent to take charge. Address C. A. L., 429 South Laurel St., Richmond, Va.

SITUATION WANTED.—By good all-round florist, S. have had 7 years' experience in general stock. Not afraid of work. Nationality, English; age 25. Address Box 45, Lexington, Mass.

WANTED.—Florist; working foreman; roses, carnations, mums, etc.; must be good manager, capable of handling men; be able to furnish very best references from former employer or as ability, etc.; only first-class man need apply; moderate size place to Philadelphia; good wages with tenant house. Address Phila, care Florists' Review.

SITUATION WANTED.—As a good all-round florist of 1st growing roses, carnations, etc., capable of taking full charge; single; 21 years' experience. Address N. C., care Florists' Review.

SITUATION WANTED.—By thoroughly experienced cut flower grower; 11 years in this country; single; references. Address K., care Florists' Review.

WANTED.—Several men as assistant rose growers. Apply ready to work to Hasset & Washburn, Hinsdale Ill.

WANTED.

Man to take charge of store, in western city. Must understand both retail and wholesale trade, and be a good maker up and decorator. A good, permanent place for the right man. Don't apply unless you have first-class references as to reliability and trustworthiness.

Address I. O. A., care Florists' Review.

FOR SALE.

Controlling interest in a first-class nursery company, doing a good and paying business, both local and shipping trade, well established, good stock coming on. Location the best for living and growing stock. Long established. Address OWEN R., care Florists' Review, Chicago.

Seed Sweet Potatoes.

Entered at the Chicago post-office as mail matter of the second class.

This paper is a member of the Chicago Trade Press Association.

A GERMAN BOTANIST has been examining the flowers of Europe with a view to discovering what proportion of them give out a pleasant odor, and what effect color has on this point. He found that only 420 out of 4,300 kinds of flowers have a pleasant odor, nearly all the others being offensive.

GIBSON CITY, ILL.—The Swan Peterson Floral Company has completed its organization and has elected officers as follows: W. H. Simms, president; F. O. Culter, vice president; E. Mattinson, treasurer; Swan Peterson, secretary and general manager.

ERIC. Please remember that we cannot give any consideration to anonymous communications. While we print contributions over initials only we must know the correct name and address of the writers.

KANSAS CITY, Mo.—J. G. Peppard is having plans prepared for a large seed warehouse to be built at the corner of Hopkins and Henning streets. It will be three stories high and long enough to afford switching room for fifteen cars.

LAST CALL for ads. for our special spring number, to be issued next week. Copy must reach us by the morning of Wednesday, March 27, at the very latest to be in time.

THE TITLE PAGE of the REVIEW's special spring number, to be issued next week, will be a beauty, and you will not need a diagram to understand it.

MILWAUKEE, WIS.—Several have decided to build soon. Edward A. Austin will put up 8,500 square feet of glass, William Getzein will erect 4,500 feet and C. H. Klevenow 7,500 feet.

WAYNESBORO, PA.—Henry Eichholz will soon add 4,500 square feet of new glass.

ST. PAUL, MINN.—W. J. McWhinney will soon erect 5,400 square feet of glass.

ASTON, MINN.—A. N. Kinsman & Co. will soon add 7,500 square feet of new glass.

BELVIDERE, ILL.—B. Eldridge will soon put up 8,000 square feet of glass and J. W. Lyons & Co. will erect 5,400 feet.

ROSES.

We believe in shifting young roses often. All stock offered in 2½-inch pots has been shifted from 2-in., and is equal to most stock advertised as 3-in., and when we send it out is well established. Let us know your wants. 2 and 2½-inch stock is fine. Varieties grown: Meteors, Brides, Maids, Perles, La France, A. V. Kaiserin, Woottons, Belle Seibrach, Pres. Carnot, Golden Gate, American Beauties, Liberty.

CARNATIONS. R. C. and 2½-in. Bradt, Crocker, Joost and McGowan.

R. C. Colosse. Mixed Verschaffeltii, Golden Beedler, Yellow Queen, etc., etc.

English Ivy, 2½, 3 and 4-in. pots, fine.

GERANIUMS. Red, White, Pink, in 3-in.

SPECIAL IN WOOTTON ROSES. If you are interested in having a fine lot of Roses for summer, order our 2½-in. stock ready to put in beds.

A few thousand Sprenger ready for 2-inch pots.

BOSTON FERNS.

Do you want to make some money for Easter? Then write Geo. A. Kuhl, Pekin, Ill., about those 4, 5, 6 and 7-in. Bostons to be had. They are ready for a shift and will make you money as well as a fine display at Easter time.

Geo. A. Kuhl, PEKIN, ILL.

American Beauties and Valley Our Specialties. 1612-14-16-18 Ludlow St., Philadelphia, Pa.

Mention The Review when you write.

NEW HAVEN, CONN. The partnership known as the Elm City Nursery Co., Messrs. C. P. Lines and Ernest F. Coe, proprietors, has been incorporated and will be known in the future as the Elm City Nursery Co., capital \$15,000, paid in. President and treasurer, Ernest F. Coe; secretary and manager, H. E. Turner. The new company is the outgrowth of the business started some forty years ago by Mr. C. P. Lines, the veteran nurseryman. He devoted himself for a number of years to the propagation of grape vines, later adding other hardy trees and shrubs until a general line of nursery stock could be had at his show-ground on Beers' street.

About ten years ago Mr. Ernest F. Coe was admitted to the business which was known as Messrs. C. P. Lines & Co., and later Elm City Nursery Co. By strict attention to business their trade grew so rapidly that in 1896 it was thought advisable to purchase a tract of land on Edgewood avenue, Westville. As is now generally known they have gathered here one of the most extensive stocks of fruit and ornamental trees, shrubs, evergreens, roses, etc., to be found in New England. The secretary of the newly incorporated company, H. E. Turner, has been with the old firm a number of years.

ALBERT LEA, MINN.—P. Clausen & Son have purchased material for two new houses to be erected this spring. One, 20x125, is for carnations, and the other, 14x45, is for palms. They have also purchased a 50 H. P. boiler that will be installed when the new houses are finished. They will then have a total of 11,500 square feet of glass.

LOWELL, MASS.—Otto H. Bourdy has leased the greenhouses formerly conducted by Paul R. Bartt and Mr. Bartt has bought a larger place nearer the center of the city.

LEWISTON, ILL. The boiler at the greenhouses of William Jones broke down last week and before repairs could be made serious damage to his stock had been done.

HOLYOKE, MASS.—Edward H. Howland, the florist, was married March 13, the bride being Miss Nellie M. Wilder of Conway. The happy pair are now on their wedding trip, during which they will visit New York and Washington.

MINNEAPOLIS, MINN. William Donaldson & Co. have decided to erect a range of glass containing 30,000 square feet at an early date.

FOREST CITY, IA.—Albert Stütz, of Arlington Heights, Ill., will soon build greenhouses here containing 5,000 square feet of glass.

CLEVELAND, O.—A. Schmitt of Glenville will this spring add 3,500 feet of new glass.

ST. LOUIS, MO.—J. C. Brohan will soon put up 2,400 square feet of glass,

SWEET PEA EXHIBITION.

A special exhibition of sweet peas will be held at the Pan American Exposition, Buffalo, July 23 to August 2. The classification will be as follows:

- Class 1—25 sprays of pure white.
 Class 2—25 sprays of yellow or primrose.
 Class 3—25 sprays of bluish or light pink.
 Class 4—25 sprays of rose or deep pink.
 Class 5—25 sprays of orange or salmon.
 Class 6—25 sprays of mauve or lavender.
 Class 7—25 sprays of red or scarlet.
 Class 8—25 sprays of maroon.
 Class 9—25 sprays of blue.
 Class 10—25 sprays of contrasting shades.
 Class 11—25 sprays of light stripes or blends.
 Class 12—25 sprays of dark stripes or blends.
 Class 13—Collection of 30 vases named varieties, 25 sprays each, not to include introductions of 1901.
 Class 14—Collection of 12 vases, same conditions as class 13.
 Class 15—Collection of novelties; introduction of current year; 10 sprays each variety.
 Class 16—Group of 6 distinct varieties; 25 sprays each, in three colors, pure white, light pink, and lavender.
 Class 17—Group of 6 distinct varieties; 25 sprays each, in three colors: red or scarlet, deep pink, and orange.
 Class 18—Group of 6 distinct varieties; 25 sprays of each, in three colors, yellow or primrose, blue or maroon, and striped or variegated.
 Class 19—Bouquet not to exceed 200 sprays; quality of flowers, harmony of colors, and taste in arrangement to govern.
 Class 20—General display; 25 sprays of each variety.

Entries must be received by superintendent not later than Saturday, July 20th.

Exhibits must be in place not later than noon of the opening day.

Any exhibit in one class will not be considered as competing for award in other classes. The lowest award will be a diploma; the next a bronze medal; the next a silver medal, and the highest a gold medal.

Within a few days we will have in pamphlet form a schedule of all the flower exhibits to be held during the summer, which will be sent with to the several specialists of the country and will be gladly supplied on application.

This list is subject to slight changes.

HUNTSVILLE, ALA.—W. F. Heikes, manager of the Huntsville Wholesale Nurseries, will be in St. Louis during March and April to distribute stock shipped to cold storage there. Mr. Heikes was the first to make use of cold storage for nursery stock, and this is his 21st year in shipping to St. Louis for distribution.

Haverhill, Mass.—C. H. Kaulback is building two new houses and will put in new boilers. Frank Poore has sold his retail store to Chas. McLaughlin. His greenhouses have not been in service this winter, and it has not been decided what disposition will be made of them. Luce Bros. are planning to build two houses soon.

CLEVELAND, O.—The Home Gardening Association is preparing to make its annual distribution of seeds among school children. The commoner flower seeds are given the children at the rate of one cent a packet. Last season nearly 50,000 packets were distributed.

LOS ANGELES, CAL.—C. B. Kelly, the nurseryman, was badly burned Feb. 14 as the result of the explosion of a lamp. He was taken to the hospital, and while his burns are not considered dangerous he will be unable to attend to business for some time.

HENRY A. DREER,
714 Chestnut St., PHILADELPHIA.

THE NEW CANNA Golden Age

THIS CANNA originated on my grounds in Ocean City from seed dropped from the Florence Vaughan. The bloom is a rich golden yellow, free from spots or stripes, has five broad, full petals, which gives it the shape of a lily, is fully as large as the Italia grows about four feet high and is a vigorous grower. The foliage is a bright green. It is a canna of the orchid type, but stands the wind and hot sun fully as well as a Crozy. For hardiness and beauty it cannot be excelled by any canna in cultivation. The first root was sold to P. S. McDonald of Philadelphia, for \$200.00 over others, while he stood looking at them in bloom last summer. We have but a few hundred pots, and anyone who desires to get into the stock of this lovely canna had better not wait. It is the only yellow canna in existence without spots.

Strong roots that will grow two eyes, 50c each; \$5.00 per doz. Expressage prepaid.

G. P. MOORE, Ocean City, N. J.

KALAMAZOO, MICH.

Various Items.

During the last week trade and prices have dropped considerably although it is still fair. I suppose it is owing to the Lenten season. Stock is good and in fair quantity. The brethren are putting in their best bids to make a good Easter and from present appearances are likely to succeed.

The Kalamazoo Nursery & Floral Company held their first annual meeting recently, and report a prosperous year, with a bright outlook for the future. This concern, which started in last summer with some four thousand feet of glass, is under the management of Mr. W. C. Cook, formerly with the Dunkley Floral Company and more recently manager of the Chicago Floral Company of this city, now defunct.

Friend George Taylor is still doing business at the old stand on Portage street. He had the misfortune to lose his horse lately.

Mr. Sam Batson is still cutting quantities of very fine carnations which he is shipping to Cincinnati.

Van Borchove & Bro. are cutting some very fine rose, carnations and lilies. This enterprising firm have during the last two years doubled their growing capacity and the increasing demand for their stock compels them to enlarge again this year.

The Dunkley Floral Company are also cutting some nice stock. This establishment which after the demise of the late Mr. Joseph Dunkley, was allowed to run down considerably, is under the present able management, gradually assuming its old time form.

Weather has been squally and dark; have not seen the sun for a week.

RIBES.

SPRING.

Says the Crocus to the Snowdrop,
How is the weather now?
"On I come up in the sunshine—
And warm my frozen hooves"
"What says the weather man—
About the storms to come?"
"It isn't pleasant down here now,
In fact, I feel quite clammy."
Stay in your bed, the Snowdrop said,
And sleep in sweet repose.
For if you try to come up now
You'll surely freeze your nose.
The weather man predicts it warm,
With sunshine and all that,
But you must bear in mind that he
Is talking through his hat.
So the Crocus stood in bed until
The Snowdrop rang its bell,
To call the sleeping Crocus up
And tell it all is well.
The Crocus stood on guard until
The warming sun stood high,
Then called the blue-eyed Scilla up
To mock the azure sky. —S. C. C.

A VERY interesting and instructive series of leaflets printed for free distribution upon request with orders for seeds has been issued by W. Alice Burpee & Co., the Philadelphia seed-men. Their titles are: "How to grow dahlias," "Remedies for insect pests," "How to grow tomatoes," "Salads and garnishes; their use and cultivation," and a collection of verified criticisms and comments upon the much-talked-of poem, "The man with the hoe," in addition to the original poem.

CANANDAIGUA, N. Y.—A building adjoining the greenhouses of A. W. Birch was destroyed by fire March 2, and though the greenhouses were saved the damage to the contents was serious. There was no insurance.

HEADQUARTERS FOR EASTER PLANTS.

I have an immense stock of the finest and choicest in the market, and in such quantities that you can fill any order. I have a large variety of the best of these plants. You would be astonished if you could take a look in seven (7) large greenhouses. I have a large stock of all the plants mentioned in the fullest extent, and devoted to the entire cultivation of Easter plants alone. These plants are ready to fill orders, at any time, as far as the supply will reach.

Azalea indica. I am one of the latter and probably the best choice. Easter plants, about a thousand more than last year. I got these in large boxes, 28x15, just received from the grower. The quality of these plants, the azaleas were selected by myself last fall on my second trip to Belgium and as I am agent for a large quantity of them, I have been able to purchase your goods at first hand and not through a middle-man. I have only one stock of plants in bloom, or buds, blooming Easter week, 6-in. pots, 60¢, 75¢ and some for 10¢. Most of them are Mme. Vander Crayzen, and some of the best varieties which will be selected by myself. I have some fine specimens, 10-12 in. pots, 20-22 inches across, very large. Mme. Vander Crayzen, of 800¢ shape and full of buds, \$3.00 each, each, each, each. Very fine specimens, \$1.50 and \$2.00 each, worth \$3.00.

Spiræas compacta and floribunda. Fine bushy plants, my own importation, perfect jewels, 2 1/2-in. pots, \$3.00 per doz.; Specimen plants, \$1.00 per doz.

Hydrangea (Pink), 5 1/2-6-in. pots, \$3.00 to \$4.00 per doz.

Cinéraires hybrids. Choice colors, 6-in. pots, \$2.50, \$3.00 and \$1.00 per doz. In bloom now or at the end of the house full of buds.

Begonias President Carnot and Semperparva giganteum, also some other varieties, 6-in. pots, \$1.00 per doz.

Best choice of plants for decoration: 6-in. pots, \$1.00 per doz.

Daisies (white) Marguerite. Fine bushy plants, 5-6 in. pots, \$1.00 per doz.

Lilium Longiflorum and Harriett. Fine plants, raised from bulbs (3x), obtained of the well known firm of Henry Mitchell, 6-in. pots (from 5 to 10 buds to a plant), at the rate of 10¢ per bulb. Height, 1 1/2 to 2 1/2 feet. No Hires and by themselves; other plants must accompany them.

Cyperus (Umbrella) plants, 4-in. pots, \$1.00 per doz.

Corypha australis (Palms), fine plants, 14 1/2 in. high, 5-5 1/2 in. pots, each.

Delia (India) imported, for decoration; 6-in. pots, 50¢ each.

Hyacinths (Dutch) named, strictly my own raising, from bulbs that cost from \$6.00 to \$8.25 per 100. These fine hyacinths I am selling at the rate of \$10.00 per 100; extra choice, \$12.00 per 100.

Tournefort Tulips (double red and yellow striped), in 4-in. pots. They are simply beautiful and sell at sight, \$1.50 per doz. pots.

Daffodils (Von Sion), 3 in a 3-in. pot, at \$1.75 per doz. pots.

Geraniums (3-in. pots, Mme. Thibaut, Pilot, and some other good varieties, \$5.00 per 100.

Chrysanthemums, please. They can be sent safe by express, postal money order, registered letter or drafts on Philadelphia or New York banks. At such a busy time packing and shipping I have no time to inquire into recommendation letters. All goods shipped at purchaser's risk.

GODFREY ASCHMANN.
1021 Ontario St. PHILADELPHIA, PA.

HAMMOND'S SLUG SHOT.

1901

Destroys Pests which prey upon Vegetation in the GREENHOUSE, CONSERVATORY or GARDEN.

SLUG SHOT is a composite powder not dependent solely upon any one of its parts for effectiveness. For 21 years **SLUG SHOT** has been used, doing effective work against Leaf Eaters, Juice Suckers, Sow Bugs, Snails or Grubs in the soil. **SLUG SHOT** is spread by duster or blower. Water will carry it through a sprayer or pump. It destroys in this way elm tree beetles, caterpillars on trees. Where Snails or Sow Bugs are troublesome, dust **SLUG SHOT** on the soil with a duster. **SLUG SHOT** rids lawns, calves and dogs of lice and fleas. **SLUG SHOT** is put up in tin perforated screw-top canisters and cartons holding one lb. The 5-lb. package (see cut) retails at 25 or 30c each, larger packages at less rate. **SLUG SHOT** is

Sold by the Seedsmen in all parts of the United States and Canada.

GRAPE DUST for mildews and blights.

SOLUTION OF COPPER against fungus of all sorts.

MR. WM. MUNRO, ONE OF THE JUDGES
APPOINTED BY THE PHILADELPHIA FLORIST CLUB TO JUDGE
OUR GRAND NEW ROSE

Queen of Edgely

PINK AMERICAN BEAUTY.

Writes—December 31, 1900, as follows:—

"Having had the pleasure of visiting your greenhouses and seeing— for the first time—your new rose 'Queen of Edgely' growing on the plants, I should like to say that my first impression as regards its sterling worth has been greatly strengthened. At the time of my visit it was a sight worth going a long way to see, having stems 6 to 8 feet long. With its luxuriant foliage, exquisite color and fragrance, large size of bloom, together with its free budding qualities, I consider it a grand introduction and a money maker for all growers of American Beauty Roses."

Lansdowne, Pa.

Truly yours, WM. MUNRO.

MISCELLANEOUS SEASONABLE HINTS.

With us, spring is here; the robin awakes us in the morning, the croak of the frog greets our ear and the crocus will soon greet our eye. There was little frost penetrated the ground this winter as a continual covering of snow kept it out, so after all it is likely to be an early spring everywhere except on the banks of the Niagara, for we have to go through a six weeks' refrigerating period while the ice of the inland seas passes down the lakes and finally tumbles over the mighty cataract. But this is not altogether a disadvantage as it somewhat retards vegetation and gives more time for our outside gardening and this leads on to what I have in mind.

Pruning Hardy Shrubs.

Perhaps you have not had time or opportunity to prune your hardy roses and shrubs either of your own or your customers. It was a wise man who said the best time to prune a tree was when your knife was sharp, but neglect to prune roses and shrubs during winter or spring would result in very unsatisfactory condition of the plants. Remember the broad distinction between those shrubs that flower at the end of a growth and those that have already formed their flower buds and only need the warm days of spring to expand them. Nearly all our common fruit trees belong to the latter. Among flowering shrubs the lilac, clyonia (Japan quince) and forsythia are well known examples that have already set their flower buds and if you prune them hard you will simply get no flower, only growth.

The hardy roses, *Hydrangea paniculata* and *althaea* are familiar shrubs that should and must be pruned back to two or three eyes of last year's growth; so long as you leave three good plump eyes the stronger will be the growth and larger the flowers. Many of our shrubs are allowed to grow into gawky, naked objects because they have not been kept down. You may say: "What about those shrubs that you don't prune, the early bloomers?" Prune those as soon as the flower is entirely gone, then they will make a growth and set their flower buds for another year. No better time to prune where it is needed than now.

Herbaceous Plants.

If you did not do all your transplanting in October or November now is a good time, just as soon as the ground is dry; many of them will hardly know they have been moved, but the principal object of moving is to divide, which is quite necessary with many. The center dies out, the soil becomes exhausted and they become straggling, and a move every five or six years is of the greatest benefit, but different genera differ very much in this respect; while a pacony will make a fine clump for years, the helianthus will spread out over all creation.

Bay Trees—*Hydrangeas*.

Florists who have not had an European experience do not realize how hardy a

tree is the sweet bay (*Laurus nobilis*). We don't all have sheds adapted for their care during winter and have to keep them in our coolest house taking up much valuable room. If they have been kept warm they may feel 10 degrees of frost but if kept cool and they have not started into growth they should go outside at once. If we do get some sharp frosts they are easily laid on their sides and some cloths or mats thrown over them for the night.

The same can be said about the large tubs of dormant *Hydrangea Otaksa* which are going to be very fashionable. Our customers see them in all their glory at the sea-side resorts and they want them for their home grounds. *Hydrangeas* that are the slightest bit advanced by the heat of a greenhouse are useless for this purpose for they soon become shabby. They must have been in a basement or root-house or sunken pit and the sooner they get the open air and full light the better so that they can come along slowly as our hardy shrubs do. They don't want any frost but are easily

low your crops are. There is nothing like being well organized to do the business and do it rightly and satisfactorily to your customers. The least excusable of all omissions is to have dirty pots. You know pretty nearly what is going to sell and it is little labor wasted if you do have a few hundred pots washed that were not actually necessary. If you buy your plants, insist on the grower delivering them all with well cleaned pots.

I cannot recommend any better system than that we have adopted for several years past, viz., to set aside in your most convenient house a space in which each day's deliveries shall be placed and labeled as soon as sold. The man who has head enough to ship out the stuff on the wagons as soon as there is one waiting is a very valuable man but every help should be given him, and if he has a thousand plants to be sent out on Friday, two and three or a dozen to one party it is a great help, in fact a necessity, that they should be all together and not at all mixed up with Saturday's or Sunday's delivery.

We all have to call in help on these busy days that are very inexperienced in delivering and it is a poor plan to trust to their intelligence and thought, so lay things out so that they can't go wrong. We write the name and address on one plant and also on that label the articles going to this address, if more than one, and then on the other plants just the name and address. It is no use saying to the driver, "Here is a lily, an azalea and a rose for Mrs. Mark

A vase of American Beauties at the exhibition of the American Rose Society in New York.

protected if we do get a cold snap and are much better out of doors than in any winter quarters.

Easter.

Every thought and energy will be given for the next few days to getting things in shape for Easter. Little can be added to what has been already said about either forcing or retarding. You will know now without any doubt just

Hanna." He will say "all right, sir," but with a wagon load it's impossible for him to remember, and the name only makes sure. We know how horrible it is about 7 p. m. Saturday to have Mrs. Rockefeller call you up on the phone and tell you she has the azalea she ordered all right, but the rhododendron did not come and that she had received a pan of hyacinths which she did not order. You could send another rhododendron

but would give someone in your locality a list of buyers who you are not sure will have no more of. Finding out others, there is a name and address on every paper.

We did not find some success to dress up plants with yellow paper, perhaps it is more in fashion here than other cities, but we do not know almost every one wants the paper dressed with some cheap or fancy paper. This you must do carefully to get all the money by to the appearance of the cut and 30 per cent of all the plants purchased are sent as "memorabilia," and how happy we ought to be that plants and flowers have taken the place of the elaborate Easter cards. A few years ago, let nothing be done in the way of cutting or preparing plants for sale that can possibly be done before the first few days.

There is scarcely any plant so difficult to deliver as an Easter lily: all others that I can think of can be wrapped in paper without the slightest harm, but a lily bruises with the most careful wrapping and it two or three can swing against each other they are ruined, so if they have to go with other plants keep them far enough apart that they can run against nothing. We have in delivering a wagon load of lilies so difficultly, for then we take ten or a dozen and carefully tie the heads together so that if they swing they all go as one and no harm is done. Let us hope that we have a still day. It is the wind that hurts; a windy day and the thermometer at 30 is worse than 45 if perfectly still.

Cut Flowers.

I leave to others to tell you about the cut flower department but I can tell you that we often all of us make a mistake in saving our flowers for the last grand day when we expect to get rid of them all in a few hours. Easter prices should prevail next Monday and from then on no customer should be refused. What matters when you sell if you get a good fair price for them? I am not going to dilute on the old story of the grower salting his flowers although they are as guilty of it as ever, with of course plenty of exceptions. Send in your stuff early so that the commission man can distribute it to his patrons. WILLIAM SCOTT.

AMERICAN ROSE SOCIETY.

Second Annual Meeting and Exhibition.

The second annual meeting of the above society was held in the Colonial room at the Waldorf Astoria, New York, on Wednesday afternoon, March 20. President Benjamin Dorrance presided. The attendance was not large, not nearly what it ought to be, but it was intelligent, representative, and, most of all, enthusiastic. Probably owing to the presence of many of New York's most influential and beautiful women, the orators of the profession were at their best. There was a most amusingly interesting display of flowers of all kinds, and the location of the annual show, of course different of opinion and pride of home have all ways, will always, exist; they are vital reservoirs of human nature; they have supplied and feed the power and magnificence of our country, and the broadness and usefulness of its institutions.

President Dorrance in his opening remarks very happily reviewed the good work done by the rose society, and his hopes for the future did much to encourage his hearers. The report of the treasurer, John N. May, showed a balance of

\$2,500 in the funds of the society. The secretary, L. Barron, reported a membership of 265 in good standing, a gain of 26 during the past year; there were thirty-nine life members. The president informed us that one thousand dollars would accrue from membership dues by having this show at the Waldorf Astoria.

The secretary reported on the partisans of the previous shows, and the results of the last June show rendered it inadvisable to hold one this summer under like circumstances. It was intended to publish and disseminate some useful treatises on the diseases of the rose, and matters pertaining to commercial fertilizers, in the next bulletin to be issued to members of the society. It was hoped the society's medals would be offered at the several rose shows to be held throughout the country. The new H. P. rose, William McKinley, had been registered with the society, and he suggested that some action be taken to cooperate with the S. A. F. O. H. in the matter of registration; he also suggested a change of date for the installation of officers.

A rising vote of thanks was given to the ladies' committee for their work in connection with this year's exhibition. It was decided to abolish associate membership, the only forms now being life membership, and active membership, annual dues \$3. Provision was made for a striking fund, the interest of which is to be used to defray the expenses of the society. This reserve fund is to be vested in a board of five trustees to be elected at each annual meeting. The following were elected to serve for the ensuing year: B. F. Dorrance, John N. May, Henry Clows, Carl Stoedek and John H. Taylor.

After considerable discussion, on motion of Mr. Taylor it was resolved that the secretary refer all registration of new roses to the S. A. F. O. H. Mr. Taylor gave notice of an amendment to the by-laws changing the date of installation of officers from January to July 1, such motion to be acted on at a special meeting to be held in connection with the society's next summer show. On motion of H. A. Siebert, the society decided to hold its next exhibition in June at Newport, R. I., if possible in conjunction with that of the Newport Horticultural Society. Mrs. Burke Roche, one of New York's leading society ladies, tendered the use of her pretty summer home garden and grounds there for the use of the society, and she with Mrs. Richard Irwin and Mrs. W. Storrs Wells were appointed a committee to make the necessary arrangements. (Although June is too early for the Newport season, still the decision to have the rose show there next summer is one of the wisest moves the society ever made and a grand exhibition is assured together with the knitting together of a powerful patronage.)

The meeting assumed its liveliest when the time came to discuss the place for the next March show, and the leaders of the show distinguished themselves. E. M. Wood started the fun by inviting the society to hold its exhibition next March in the city of Boston. He guaranteed all expenses and assured them of an exhibition equal to if not better than any seen in the United States. Boston was the second largest community in the United States, he said (there were queries about Chicago, and for a time we were sorry Winterson, Keitting, Rudd, Assum and the rest of the Western Indians were not present); taking a fifty-mile radius it had 2,800,000 people; its earn-

ing capacity is 70 cents per capita whilst that of all the rest of the communities was only 40 cents; they consequently had 85 per cent more of the wherewith to pay for luxuries than any other city in America. Talk about Boston! They could make as good a rose show in Boston as they could in New York; they had their roses at the exhibition of the Massachusetts Horticultural Society that week there those they had here. A talk about New York? It was in it to a certain extent, that was all. Mr. Wood raised considerably amusement during his witty and lighthearted speech, the ladies especially enjoying his comparisons. He ended by warning the society not to be narrow, not to be local, Philadelphia and Chicago, that great growing giant city of the West, should get a chance to show what they could do, but he urged them to have the show in Boston next spring.

John H. Taylor said the society was still in its infancy and practically that was the first show of any magnitude it had held. The officers and the executive committee knew what it was to get certain influences working that they may be enabled to carry out what was desired, and now, when they had only succeeded in creating an interest in influential circles, he thought it would be a mistake to take the exhibition elsewhere, at least until they could walk instead of crawl. He moved that the next March show be held in New York City.

Robert Craig seconded the motion, and in support of it said he was convinced after due consideration that New York was the best place for the next spring show. By taking it elsewhere they would but undo what had been accomplished in the past years. He thought that New York had done nobly and was of the opinion that New York was the place for a permanent annual exhibition of the society. He cited the case of the National Rose Society of England holding their show every year in London. (The English society has held shows in cities besides London.) New York was to America what London was to England. He was sure the best interests of the society required the show to be given in New York at least until the next season. He thought exhibitions could be held under the auspices of the society in other cities, but that New York was the place to hold the principal show. E. G. Hill said the society should not confine itself to one city, that the exhibitions should be moved from one city to another in order to increase the membership and extend the usefulness of the society. He was of the opinion they could put up a pretty good show in the west. He referred to the extensive establishments in Chicago and in the state of Indiana (whereupon someone remarked that the state of Indiana was in Chicago). He disagreed with Mr. Craig as to the wisdom of making New York the permanent place for the holding of the show and that previous to his coming there he thought it would be wise to try another city. Now, however, from what he had seen and heard he was convinced that the show should be held in New York next March, and he heartily supported that plan. Upon a vote being taken it was decided to hold the next March show in New York.

Benjamin Durfee brought up the matter of judging by the present scale of points. He thought everything should be done to further the interests of the rose growers, to enable them to keep ahead of the carnationists. The present scale was defective; he thought local committees

Some displays at the exhibition of the American Rose Society at New York last week.

ought to be created which could judge roses under conditions other than at exhibitions, and a scale of points be adopted covering the most important qualities, viewed both from the grower's and retailer's requirements; it might be practicable to have an independent scale covering freedom of bloom, keeping and shipping qualities, etc.

Mr. May thought the society was steering a little too close on the point system. He illustrated the danger by referring to a particular case at that exhibition where he considered a great injustice had been done an exhibitor. Paul M. Pierson was of the opinion that Mr. Durfee's proposition was impracticable as methods of treatment and surroundings had much to do with results, and rendered it almost impossible for any set of judges to form correct conclusions. On suggestion of the president the matter of revision of scale of points was left to the executive committee.

The election of officers for the ensuing year resulted as follows: President, F. R. Newbold, Poughkeepsie, N. Y.; vice-presidents, Mrs. Richard Irvin, New York, and Carl Stoeckel, Norfolk, Conn.; secretary, Leonard Barron, New York; treasurer, John X. May, Summit, N. J. Messrs. E. M. Wood and Robert Craig were re-elected members of the executive committee. Mr. Newbold, the president-elect, is a most enthusiastic amateur horticulturist and is well known and admired by members of the trade. The interest he has taken for many years in the Dutchess County Horticultural Society has rendered it possible for that society to hold an annual exhibition in Poughkeepsie. His election to the presidency of the American Rose Society may not suit every greenhouse worker but the society

has done a wise thing and we are sure will not have cause to regret it. We hope they will not dismiss the man who has worked so hard for the past two years without some show of appreciation but that of a formal vote of thanks.

What's the matter with having an annual dinner in connection with the show? Many were of the opinion that one should be given. It is true, too imposingly true, that there are too many societies, especially in New York, anyhow. Of course every society is doing good work but when one comes to figure up the cost of belonging to all it becomes almost startling. Pity it seems that most of them could not be welded together; economy and greater usefulness demand it. However, there is no good reason why every one owning a business which depends more or less on the rose should not join this most useful society. The dues could be made much less and instead of it having a membership of 200 it should have several thousand. The society certainly deserves the support of growers, nurserymen, wholesalers, retailers and all who depend on or love the rose.

The Exhibition.

Under a most formidable patronage representing the wealth and all its power and influence in New York, Boston and Baltimore, set in rooms which are admittedly the handsomest public rooms on the continent if not of the world, the second annual exhibition of the American Rose Society opened here at the Waldorf-Astoria, on Tuesday afternoon, March 19, and closed on Friday night of the same week. From a superficial examination of the names, the place, the city, and the many expectations with this show, the "far-aways" would naturally

picture it as an assured tremendous success. Alas, such was not the case. It was a gigantic paradox. A great success as an exhibition of American rose growing, for the roses, what there were, were magnificent. A success for the future of the American Rose Society, because a greater interest has been awakened among the wealthier classes, but from a business, financial and artistic point of view it was a failure.

Pity it was (and we sincerely hope for the benefit of the society the lesson has sunk deep) that the active membership of the society did not do the planning and managing of the exhibition. We were informed on very good authority that the expense of laying out the grand ball-room for this occasion reached over \$1,000 and what was it like? The ladies' committee wanted something unusual and they were given full sway. An architect and a landscape engineer were given full privilege to execute their dreams, and the result was advertised to be "an ideal Italian rose garden" (why Italian we may never know). As we have previously stated the best artists of the country are responsible for the permanent decorations of this ball-room. The rose show architect built at one end a semi-circular colonnade of Roman pillars, fifteen feet high, and over them put a trellised roof similar to the kind seen in beer gardens. The landscape engineer surrounded the room with a twenty-foot hedge of junipers and in the center of the room four rectangular beds outlined by the same material. Two of these beds were filled with roses in pots, the other two with a miscellaneous assortment of flowering plants. In one corner of the room a lot of Japanese junk was framed off to simulate something from the

Orient. Where the main rose garden was we failed to see a rose. The only thing apparent was a great display of ignorance, readily paid for by the American Rose Society.

The real exhibition was held in the conservatory, the Astor gallery and the Myrtle room. The carnation display was an exceedingly good one, no better blooms were ever shown. All the great new ones were there: Prosperity, not for competition but defiant in grandeur; Governor Roosevelt, a magnet of attraction; and Morning Glory covered itself with glory. Mr. Ward's several new seedlings, Dorothy Whitney, Viola Allen, Harry Fenn, Golden Beauty and others, received praise from the most critical. The carnations were in a cool place and kept in good condition for the four days.

The rose exhibit was arranged in a long bed on the floor in the center of the Astor gallery. There might have been 20,000 cut roses staged. Very few of the old varieties were seen, just one vase of dear old Bon Silene, about six poor specimens of Marchal Niel, two jars of Papa Gontier, one or two of H. W. Watville, some of Hoste, Perle, Sunset and Moss; the rest, with the exception of the very new claimants, were of the sorts to be seen in every wholesale house. The quantity and quality of the American Beauties shown here, though, has never been equaled anywhere. They were grand beyond description and gave the judges lots of trouble. There were no hybrid perpetuals shown. It seems strange that many of our largest growers who are devoting time and money to these events cannot spare a small section of their immense establishment to the growing of a few special varieties of roses for these shows. One thing was forcibly demonstrated, that the best roses shown were grown outside the 150-mile radius of New York. Those from the Dale Estate, Brampton, Ontario, were finely interesting, and Utica did nobly. The Penn. boys can always succeed in winning if they set about to do it.

No definite awards were made until the second day, which occasioned considerable adverse criticism. The room was warm. Men from a distance wanted to get home the same night, and many roses far ahead on the first day were, through no fault of the exhibitors, away behind on the second day.

The retail section was poorly represented, and the work they offered was worthy of some village. Exhibits from private gardeners were almost exclusively confined to a few good men at Seabright, N. J. All honor to Messrs. Brambath, H. Ale, Wengerter, Dowlen and Kettel from that section; it is not the first time they have distinguished themselves. There were several protests against the judging recorded. Mr. Warendorf's wedding and mantel decorations were deservedly considered unworthy, though the only ones put up; the best steamer basket was ruled out because the flowers were in water, and so on. There will always be kicking. The wrongs are not altogether in the wrong; leave them to make their own classes, and select whom they consider competent judges and things might be more creditable.

The greatest amount of praise is due the officers who worked day and night in order to make the affair a success. Admission the first day was \$5 and \$1 each succeeding day. J. P. Cleary auctioned off a considerable lot of plants on

Thursday night and the cut flowers on Friday night. The Beauties, after being tested in the place, were sold for ten cents each, other stock brought good prices and a considerable sum was thus added to the general fund. The treasurer, Mr. May, informed us that owing to a great many tickets being out among the patronesses, the financial end of the show would not be known for some time. The tickets sold at the door, however, fell far below expectations.

Following is a list of the awards:

Section A—Open to All. Twenty-five Blooms—American Beauty—First, Myrtle & Baumgarten, Philadelphia; second, J. Hancock, Wysoie, Pa.; third, H. Hentz, Jr., Madison, N. J.

Golden Gate—First, H. H. Dunlop, second, H. Hentz, Jr., third, Dale Estate, Brampton, Ont.

Bridesmaid—First, Dale Estate; second, J. H. Dunlop, third, H. Hentz.

Mr. Pierpont Morgan—First, Dale Estate; second, J. N. May.

Mme. Hoste—First, Dale Estate.

President Carnot—First, Dale Estate; second, First, Dale Estate.

Golden Gate—First, American Rose Co., New York; second, J. H. Taylor, Bay Side, New York.

Mme. Chanteny—First, American Rose Co.

President Carnot—First, J. N. May.

Lady Dorothea—First, J. H. Dunlop.

Golden Gate—First, Taylor.

Section B—Growers Having Not More Than 20,000 Feet. Twelve Blooms

American Beauty—First, Righter & Barton, Madison, J.

President Carnot—First, Righter & Barton.

Bridesmaid—First, Righter & Barton.

Papa Gontier—First, P. R. Quinlan, Syracuse, New York.

Section C—Open to Private Gardeners. Twelve Blooms

American Beauty—Second, J. Dowlen

Perle des Jardins—First, W. L. Stow; second, Dowlen

President Carnot—First, Dowlen

Perle des Jardins—First, W. L. Stow; second, Dowlen

Golden Gate—First, Stow

La France—Second, Dowlen

Marchal Niel—Third, O. McIntosh

Section D—Open to Private Gardeners. Single Specimen Blooms

American Beauty—First, Hale; second, Stow; third, Dowlen

Perle des Jardins—First, Hale; second, Dowlen; third, Butterbach

Bridesmaid—First, Hale; second, Butterbach

Kaiserin Augusta—Third, Dowlen

Mr. Pierpont Morgan—First, Hale; second, Dowlen

President Carnot—First, Dowlen

Perle des Jardins—First, Stow; second, Dowlen

Golden Gate—First, Stow

La France—Third, Dowlen

Mrs. Robert Garrett—Third, Dowlen

Marchal Niel—Second, Butterbach

Lady Dorothea—First, Butterbach

Any Other Disseminated Variety—First, Butterbach

Section G—Open to All Groups. Plants

Display of roses in pots arranged for effect and covering to square feet—First, H. C. Steinhoff; second, H. A. Siebrecht

Single specimen plant in pot larger than 5 inch pots (climbers excepted)—First, Steinhoff

Climbing Roses in Pots—Specimen in tub or pot (less than twelve inches)—First, H. C. Steinhoff; second, Siebrecht & Son

Standard, single specimen plant—First, Steinhoff

SECTION H—Novelties.

Certificates to Queen of Edgely, Robert Scott, Ivory and Florence Pemberton

Six blooms of any variety, introduced since 1858—First, J. N. May, with Mrs. Oliver Ames

SPECIAL PRIZES.

The Stocked Cup for 36 garden roses in pots was awarded to Siebrecht & Son, New Rochelle, New York

The Asmus Prize for 50 blooms of Liberty was taken by B. Dorrance

The Vase Cup for best vase of any new rose was won by the Queen of Edgely, from the Floral Exchange, Philadelphia, Pa.

The Vase Cup of H. F. Mitchell, Philadelphia, Pa., in a close competition, was ultimately taken by B. Dorrance, Dorrancestown, Pa., with a display of cut roses, grown 19 miles or more from New York City.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

Highings Cup, Mrs. Peter Crowe, Utica, N. Y., with Blue

Stock Cup, for 100 blooms of American Beauty—First, Mrs. Stow; second, G. W. Bennett, who exhibited 100 blooms of very superior quality on stems of surprising length.

CARNATION NOTES.

Easter Prices.

Most of us are now trying to get an idea of how many carnation blooms we shall be able to cut during the week preceding Easter, as we can know how many orders we can safely accept. If we could depend on a certain amount of sunshine we could just about tell how many blooms there will be; but the weather is so uncertain during these two months of March and April that one can not tell from one day to the next what the weather will be like. It also makes it unsafe to save up the blooms too long, as the last week before Easter is liable to be quite warm, and blooms that have already been kept a week will not last in good condition through another week of warm weather.

grumble at paying Easter prices for poor stock that is to be used a week before Easter. The most satisfactory way we have found is to ship in your blooms regularly and begin charging Easter prices on Monday morning, and give your customers notice a few days ahead. By giving the plants a few degrees of extra heat you can force out a good many more blooms, and it will be much more satisfactory all round. You may be able to force your customers to take your saved up blooms at a high figure, because perhaps they have been depending on you and they have to have the blooms to help them out, and you may put yourself on your back and say, "Old man, you worked them that time"; but pretty soon you will be wondering why those same customers are not buying much from you.

erty yet as the ground is still hard and cold and the ball has scarcely been thrown, and not much time has yet elapsed since we can begin our plans for next season. When planting time comes we will be prepared to go right at it systematically, as it is a big job with most of us and it should be done in the shortest time possible. Keep the young stock growing and stock all those that need it to keep them from getting pot bound and stunted. They will have to remain inside at least three weeks yet, and many of them will not be out before two weeks after that. Pinch them now, as it may be needed to keep them bushy. I know you are as busy now as you can be, but that is no excuse for neglecting your next season's stock. Give me help if it is necessary, but by all means keep your young stock in good condition.

The Carnations at the Exhibition of the American Rose Society at New York last week.

I think, though, growers ought not to be too greedy and not try to save their blooms unreasonably long, as many growers always do. Prices usually go up a week before Easter, and the growers should be satisfied if they get the advanced prices for all they can cut during a whole week before Easter and not try to save all they cut a week before the prices go up.

Haven't you ever noticed how scarce stock sometimes is about ten days before Christmas or Easter? Those prices are really only meant for stock that is to be retailed for that special day, and prices are advanced a week before so that the grower can share the good prices with the retailer, who can not now buy up a lot of stuff while it is cheap and save it in good condition until he needs it for his Easter or Christmas sales. But the grower should not impose upon him by selling him a lot of stock on Monday that has to be gotten rid of by Wednesday in order to keep from losing it altogether.

Many retailers are obliged to buy up all the stock they can get hold of during the whole week in order to have enough to fill their orders, and if they get fresh stock it works all right; but the sales early in the week are light and people

and when you ascertain the reason it will be because they are buying from someone by whom they expect to be better treated.

Temperature and Moisture.

Just now we are having bright, sunny days and high, dry winds, which are extremely trying on our carnation plants after the many cloudy days we have been having all winter. This has been a very dark, cloudy winter all the way through. Do not open the ventilators more than is necessary to keep the temperature below 80 degrees, and dampen the walks to keep the atmosphere moist. The dry wind will wilt them more than the sun. This will be necessary only a few days, as the growth will soon become hardened and able to stand the bright sun and all the air there is. Notice the condition of the soil each day so there will be no very dry spots, as the blooms will soon begin to come small if the plants are allowed to suffer from drought on warm, bright days. The reds will come light in color and many of the pink varieties will look washy unless they have plenty of water.

Preparing for Planting Out.

These warm days make one begin to think of planting the young stock in the field. Of course, it is several weeks too

Preparing the Ground.

We always plow our field twice each year, once late in the fall after all the plants are dug, and we plow as deeply as possible this time, so that the frost during the winter can penetrate deep down. Toward spring and while the ground is still frozen enough to bear up the wagon we spread on a coat of manure and in spring as soon as it is dry enough we plow it in, but we plow only about one-half as deep as we do in the fall, so as to keep the manure near the surface, where it will keep the ground mellow and the roots can reach it to feed upon. The distance between the rows must depend on how you intend to cultivate them and the amount of ground you have to plant on. Some growers use a horse and shovel plow and the rows in that case must be at least 24 inches apart, but we use a hand cultivator and our rows are 15 inches apart, which is plenty. These cultivators do the work much quicker than the old-fashioned hoe, but of course you have to go over them once or twice in a season and weed between the plants. The plants are set 8 to 12 inches apart in the row according to variety. To those who only plant a few thousand and have plenty of room, a few inches each way

does not seem of much importance, but when your plant cut brings 30,000 to 100,000 if amounts are sold an acre, more or less, of ground, it makes some difference in the value, especially if the season is wet and the woods grow like they did through these regions last summer.

Do not plant carnations at the same ground year after year if you can help it. Lay a second or third year is much better and work in a good fine dressing some each carnation year. If you lay much ten not over should not plant carnations on that ground again for several seasons, or better still, some again, as you are likely to be troubled again and perhaps worse than before. It pays to plant out early, but do not try to work the ground before it is dry enough to crumble when it is turned over. If it is cold too wet it will freeze still and kill off summer and only next winter's roots will make any thing and fit to grow good plants more. A. J. BAR.

JUDGING ROSES BY POINTS.

BY BERN BOWEN.

Published by the American Rose Society, Mar. 20.

Mr. President and Gentlemen: What does this exhibition emphasize this year more than ever before? That you must encourage by every means in your power the Canadian, Western and Southern contingents in their efforts to preserve sovereignty for the rose. Bold and aggressive warfare against this numberless array of carnation seedlings that is besetting our estate and sapping and mining us with all the bustling vigor of youth. In our conscious superiority we had sunk into a peaceful, rather benignant and patronizing attitude. Centuries of unimpeded sway have made the present generation of rosearians believe their coats of mail impenetrable. We need armor plate now.

But we must "up and at them, boys." We must change front and from a war of roses it must be a war for roses. We are willing the carnation should occupy a modest standing, but let it beware of assaulting our stronghold and attempting to usurp the queenly roles. Roosevelt and Prosperity are high sounding titles and they are needed if you would give the most pink, but the rose, the gorgeous rose, even "by any other name," must dominate.

You may broaden the petals of your carnation, and lengthen and stiffen the stem; you may rival the kaleidoscope in colors, and still the carnation is a "light and airy nothing." You talk about your four and five-inch flowers, they are but soap bubbles and collapse as quickly. I venture the assertion that good old La Perle or Peerless in point of substance would outweigh most any of today's favorites. Put one American Beauty in the scales and see it weigh down a dozen, say two dozen, of your boasted leaders with pedigrees prolonged. Put one Beauty in a room and it bathes your senses with its fragrance. It seeks you. It is not ruled it rules. But what of the carnation? We must hunt for the perfume.

Size, beyond a good standard 2 1/2 to 3 inch flower is not what the commercial grower wants in a carnation, but freedom of bloom and beauty of color. He does not want, nor does the public, a carnation so large that its weary and sleepy air must contribute pain rather than delight. One would imagine that many of

the modern carnations had made their home with poppies.

But, Mr. President, I rise to speak a few words concerning the scale of points for judges, as applied to novelties which we, as a society, have adopted. What are they? Size, color, stem, form, substance, foliage, fragrance and distinctiveness. In other words they are the elements that are open to observation such as this exhibition permits. A few hours of rather hasty and perhaps confused effort of the judges may enable them to fairly apply this scale to the exhibits. But when you have awarded the medals and certificates, how much weight will they carry to the cautious and observant grower and retailer? Scarcely any, and why? Because the most vital and necessary conditions are unknown, viz:

Freedom of Bloom,
Keeping and Shipping Qualities,
Health and Vigor.

Without a certificate as to these qualities I predict that the first sale of future novelties in carnations and roses will be reduced to the smallest possible figures, not at all commensurate with the success which a worthy novelty should and would command if properly endorsed.

It is imperative that this society should adopt some method by which certainty on these points shall form a part of the decision of the judges, or otherwise the profit for the grower of novelties, which is the great stimulant to advancement, will be of the past. You may ask me why, and I reply that under our scale of points the award might be made of 100 per cent, and yet the novelty be commercially valueless. It is our province to protect the growers and retailers against such results. We must so ally our seal to such novelties in this line that it shall be a sign manual of commercial excellence under fair and careful conditions of culture.

The hollow gold statue of Mauch Adams is being exhibited throughout the country as "All Gold." Don't let our certificates and medals become but hollow mockeries. Cannot this accurate certificate be secured in some way? Is it not possible to accomplish this through an active and continuing committee, by personal observation, subdivided for localities so as to secure a minimum of expense? Would not any introducer of a novelty be none than willing to pay the cost of such personal investigation at different periods of the growing of the novelty, through such a committee of this society?

This is offered as a suggestion for the men of ripe and mature judgment in the society, and with the most sincere desire to enlarge the field of point to the introducer, by restoring the feeling of confidence in the grower which has been slowly but surely undermined through "being hit," and to make the verdict of our society unimpeachable.

It might perhaps be more practicable to have an independent scale of points to cover the elements of freedom of bloom, freedom from disease, keeping and shipping qualities, of which the introducer might avail himself at his option and at his own expense, to strengthen the exhibition certificate.

QUINCY, ILL. F. W. Breckenkamp will add a new house for carnations, and Jos. Kronet one for roses.

When you want to buy any stock our classified ads. will save you time and money.

CHRYSANTHEMUM NOTES.

Raising new varieties from seed is an interesting pastime, and if one has the time and inclination and no great desire for financial returns, he will find this a fascinating experiment.

I say, if he has no great desire for financial returns because there isn't much money in it. Out of a batch of a thousand seedlings you may not get more than one or two, and possibly even none at all that would be worth naming unless you were indifferent as to your future reputation.

There are one or two men in this country who have been doing good work in the raising of new seedlings, crossing in a systematic manner standard varieties, but they are very few, and the work here does not seem to arouse the general interest that it does in France and Australia. The latter country seems to be going into it very extensively, and many new varieties that are being raised in England are from Australian saved seed. A new variety of Pockets is, I see, named Lady Roberts, a rich crimson with gold reverse. Canada also has raised and named its Lady Roberts, which is a white variety, so by and by I suppose they will clash. Many of the Australian and French varieties are useless here, because the commercial instinct predominates and only clear, decided colors sell readily in our markets. So many of the varieties that are unsurpassed for exhibition flowers are practically useless for commercial work, and they sink into an early grave.

Mons. Chene de Lache is a great favorite of mine as an exhibition flower. It was raised by Cabat, if I remember correctly, and is a very peculiar color, crushed strawberry shaded yellow. It is about as near as I can come to it.

Kate Broadhead is another good exhibition variety of peculiar color, which is a sort of golden amber, a very vigorous variety.

Mr. T. Carrington is an immense flower of extreme rose color. While the color is very dirty when placed alongside a good pink, as an exhibition flower it is a whopper.

Harking back to raising new varieties from seed, if the reader is proposing to go into it, he should sow his seed at once. Either Japanese or home saved seed can be procured from a good seedsmen. Use nice, light soil and place in a temperature of about 60 degrees. When the seed is germinated and the young plants begin to grow, gradually harden them off and prick them out into flats. When large enough they could be planted outside and lifted in the fall before frost. It is astonishing the diversity of forms and colors a batch of seedlings presents, most of them, of course, reverting back toward the primitive yellow flowered Indicum.

Possibly you may get one that will make Timothy Eaton look like 30 cents or less. It is always best to look at things with optimistic eyes. If you do get a good one, of course you will name it after yourself or your wife, with all becoming modesty, and wish you were in England, where the guileless nurseryman puts out his new variety at 7-and-6 or 10 shillings per plant, expressage and packing extra, and yet we think those fellows are slow over there.

BRIAN BOWEN.

RHINEBECK, N. Y.—H. Stewart will start in business here as a violet grower and will shortly erect two large houses.

House of Bulbous Flowers Grown by Peter Weiland.

BULBOUS FLOWERS.

The accompanying engraving is from a photograph of a house of bulbous flowers grown by Peter Weiland at his father's establishment in Evanston, Ill. He has been very successful with bulbous flowers and in response to a question says:

"I don't believe in attempting to force tulips or daffodils before Jan. 2. I generally start the first batch on that date, setting them under the bench for a few days, and then placing on heating pipes until almost ready to open. Then they go up on the bench."

THE PHILADELPHIA SHOW.

The spring exhibition of the Pennsylvania Horticultural Society was held last week in Horticultural Hall. The plants and flowers shown were well grown, the color effects were beautiful, and the arrangements excellent. The society is doing good work for the advancement of horticulture, and to many of its members these spring shows are second in point of interest only to the fall exhibitions. The standard of excellence as seen in this instance was a little higher than in the past, which is something to be proud of.

The features of the main hall were the groups of foliage and flowering plants, beautifully arranged with quantities of spring flowers brightening up the tropical green. These groups were shown by Francis Canning, Joseph Hurley, John Thatcher and Westcott's Nurseries. The stage was banked with specimen plants of *Latania borbonica*. On one side was an Easter window by Jos. Kift & Son, effectively arranged with foliage, flowers and ribbon and brightly lighted from above. On the other side was Robt. Craig & Son's exhibit of carnations, fancy varieties well grown. The rest of the hall was filled with plants, nearly all in full bloom, the large specimens on the floor, the shorter ones arranged on tables, the general effect being rich to a degree.

Curiously enough the plant that impressed me most was not an azalea, genista, spirea or cineraria, but a huge

Chrysanthemum fulvescens! Yes, you may well smile, only a common Paris daisy, but grown as I have never seen a daisy grown before. Perfect in form and foliage, with hundreds of open flowers and more buds than flowers.

Pandanus Sanderi, shown by H. A. Drier, made its first bow and received a silver medal as the first act of a specially appointed committee. This committee is formed of experts who are recognized authorities each in his own line and is intended to give proper examination to all novelties shown before the society. The plan is for intending exhibitors of novelties to notify Secretary Rust one week before a meeting of the society at which the plant is to be shown. These meetings are held on the third Tuesday in each month. The novelty must be staged at 3 p. m. on that day, in order to be judged by daylight, and must remain for the regular exhibition, which begins at 8 p. m. The week's notice is to enable Secretary Rust to get the committee together, and not as in the past to have to select judges from among those present. The committee has for its chairman Edwin Lonsdale, a recognized authority on plants and flowers and who has made a special study of most of the novelties recently introduced. The other members of the committee are each specialists in their line, the mere mention of whose names carries confidence in the ability and fairness of their decisions.

To return to the exhibition, The bulbous stock was shown in large pans, proving a feature. Daffodils, tulips, Dutch and Roman hyacinths, valley, all done in a way to delight the hearts of each and every member of the invading army of foreign salesmen that G. C. W. mourns so forefully.

H. Weber & Sons, Oakland, Md., had a fine lot of carnations, including a vase of 100 Lawson's, grand flowers. The only roses that didn't go to New York were two vases of Ivory (white Golden Gate) from the American Rose Co., Washington, and one vase of Beauties from Adolph Fuhrnwald, of Hill-side, Mont. Co. The former is a pretty thing that has some good points, the latter were fine blooms with long, heavy stems.

Three seed firms, Drier, Lindbergh and Michell, had exhibits of seeds, bulbs and implements in the hall at the foot of the main staircase.

What the attendance lacked in quantity (the weather was very unfavorable on Wednesday) it made up in quality; everybody seemed appreciative of the really good show.

PRIZE WINNERS

The following is a list of the prizes awarded by the judges, consisting of J. W. Goldsch, chairman, W. A. Monte, Joseph Hurley, Chester Davis and James Verrier:

Crocuses, display of plants and cut flowers, arranged for effect. First prize, \$5, to Alphonse Fontat, gardener to Mrs. George B. Wilson.

Ferns, specimen plant. First, to Joseph Hurley, gardener to Mr. James M. Rhodes.

Azaleas, six plants, six varieties. First, to John Hobson, gardener to Mr. Edward A. Schmidt.

Azaleas, two plants, two varieties. First, to John McCleary, gardener to Mr. William Weinbrunn.

Genistas, three plants. First, to George Robertson, gardener to Mr. Clement B. Newbold; second, to Fremont Canning, gardener to Mr. Samuel T. Bohne.

Zonal geraniums, six plants, six varieties. First, Joseph Hurley, second, William Robertson, gardener to Mr. John W. Fowler.

Zonal geraniums, specimen plant (one prize, Joseph Hurley).

Zonal specimen plant (one prize, George Robertson).

Astiles, six plants, three varieties. First, Ernest Schrader, gardener to Mr. William L. Ellis; second, Joseph Hurley.

Marguerites, one plant. First, Joseph Hurley; second, George Robertson.

Primroses, English hybrid, three pans. First, John McCleary.

Primroses, four pans. First, Joseph Hurley; second, John McCleary.

Bonnie's (Bellis Perennis), two pans. John T. Whittaker, gardener to Mr. Charles F. Loring; second, John McCleary.

Deonias, flowering varieties, three plants, three varieties. First, John Thatcher, gardener to Mr. Edward Le Bouteiller; second, Joseph Hurley.

Deonias, flowering varieties, specimen plant, one prize, Joseph Hurley.

Gallias, six plants. First, William Robertson; second, John McCleary.

Yuccas, four pans. First, William Robertson; second, John Whittaker.

PREMIUMS OFFERED BY H. WATERER.

Heavily blooming six pots, six varieties, three bulbs to a pot. First, Joseph Hurley; second, William Kleinbehn, gardener to Mr. P. A. H. Wilson.

Narcissus, single-Six pans, six varieties, first, Joseph McGregor, of Darby; second, Francis Canning.

Tulips-Six pans, six varieties, first, Joseph McGregor, second, Thomas Holland.

Lily-Six pans, six varieties, first, Joseph Hurley; second, Thomas Holland.

ROSE PROPAGATING HOUSE AT THE ESTABLISHMENT OF PETER REINBERG, CHICAGO.

of usquebaugh to relieve their exhaustion, and if I wanted to break a man's heart I would only allow George McHure to look through the keyhole.

I have digressed. Not only the officers, but every member of the club, must work hard this summer for the credit of our club and our fair city.

I believe we only sent one delegate to the Rose show, and that was W. J. Palmer. Will you please notice how brilliantly the two great rose growers of Ontario came off, actually taking the principal prizes for the great commercial roses. This pleases me, because I live so near the border, but beyond that I want Mr. E. M. Wood to realize that besides sun, soil and brains, and a few other trifling incidentals, the great factor in producing these wonderful roses is bottled glass.

W. S.

PHILADELPHIA.

The Market.

The cut flower market continues active for the season; white flowers, choice roses and all grades of carnations are in demand, also greens; violets and daffodils are poor, the Greeks having both in quantity. Lady Campbell is an exception to the above, this variety still being in fine form. Many of the poor daffs are from the south, but some came from over the water. Sweet peas are more plentiful, nice blooms are in demand at \$1.50 per 100; poor ones are hard to sell at any price. Prices on other flowers are about as quoted last week excepting that fancy Beauties are a shade lower and second class Maids are in over supply and often sold cheaply in consequence.

Easter Stock.

Easter stuff is a matter of deep interest now. It is impossible to give a complete view of the field, here is a partial glimpse: Jacob Becker is sold out of lilies already; has azaleas, pot roses, etc.; Samuel J. Bunting has lilies, hydrangeas, spiraeas and a variety of Easter stock; this is his specialty. William

K. Harris is strong on geranias, azaleas and other Easter stock; has few lilies this year. Robert Craig & Son are strong on lilies, azaleas and other blooming stock. Chas. Morky has his usual variety of Easter stock, except lilies. Julius Koehler & Son have a good assortment of well grown stuff. Albert Woltenaue has a fine lot of Easter stock, the novelty being Japan snowballs, very effective for church decoration. George Anderson has fine lilies and a fine lot of hydrangeas.

Various Items.

The exhibition of the American Rose Society at the "Hyphen"—Here you must ask "Where is the Hyphen?" It is between the Waldorf and Astoria! Isn't that great?—last week showed that Philadelphia Beauties are in the front rank as of yore. Myers & Sautman, Joseph Heacock and Adolph Fehrenwald all won laurels with this rose. The other features of interest to Philadelphia-ites were that H. H. Battles offered a silver cup for the best display of orchids and that the Floral Exchange won the silver medal for the best new rose with Queen of Edgely.

Samuel S. Pennock is receiving some fine Liberties; the very best bring \$4 a doz. The chief novelty at Mr. Pennock's is the new adding machine, similar to those used by the banks; a good step forward in the march of progress.

John C. Gracey, 2028 Columbia avenue, besides doing a general florist's business, makes a display of fish and aquariums. Mr. Gracey makes the aquariums himself in leisure moments.

George Burton, who has been for some time past with Vaughan's Seed Store in New York, has returned to his father's place at Chestnut Hill.

Edward Reid makes carnations, a specialty; besides local business, he ships 35,000 blooms out of town last week.

George M. Moss has been handling lily of the valley from E. G. Assmeyer since he started in business. This valley is of uniformly fine quality.

Chas. E. Meehan has planted his new rose house with La France and Carnot in 5-ft. beds. The plants are in nice condition. The first blooms of La France will be fit about Easter.

J. J. Habermeil & Sons have a fine lot of hydrangeas for their retail trade.

Alfred D. Hoag has given up his store on Chestnut street, below Seventeenth street.

William Munro is manager for T. E. Ferguson, Lansdowne, not Burton, as incorrectly printed last week. PHIL.

ST. LOUIS.

The Market.

Trade is very quiet at present. Stock is decidedly more plentiful, there being more than enough flowers for the demand. As a consequence, some of the downtown store men are once more coming to the front with cheap prices.

There is a good deal of speculation as to the Easter supply. Harris's will be the main feature, a few of the well informed parties claiming that they will be quite plentiful, as will also other Easter stock. Easter prices, they say, will go into effect about April 1. The fact that there will be an increased demand for Easter is proven by several large orders that have already been placed.

Prices.

Beauties have weakened somewhat and must be extra fancy to bring \$4 per doz. Brides, Maids, Meteors and Golden Gates, extra select, are as high as \$6 and \$8, but the bulk of them are sold at \$3 and \$5, Perles and Woodtons from \$2 to \$4.

The supply of carnations is heavy just now. Fancy stock brings \$3 per 100, good common stock from \$1.50 to \$2. The demand for this stock is very heavy, especially white, which seems scarce, none being left over. The growers of carnations have no complaint to make, as prices have been good all season and very few blooms went to waste, and

these conditions will continue until after Easter.

Bull-stock is on the advance, especially white and the light shades, which can be used in funeral work but it comes in in such great quantities that much is left over and we are a little afraid that it will be scarce at Easter, just when we need it most.

Violets are in about the same fix as bull-stock with prices unchanged from last quotation. Lots of sweet peas are coming in just now which had very little sale at 75 cents per 100.

Notes.

Visitors in town the past week were Joe Baker, of New York; Arnold Binzer, of Chicago; and Chas. Ford, of New York. The latter was called home by telegram stating that his father had died in Philadelphia. All are well pleased with the trade and have booked plenty of orders.

The Engleman Botanical Club held a meeting last Thursday night at the medical college. Messrs. R. J. Mohr and A.

BOSTON.

Trade Conditions.

"Things do go tough!" In the case of roses, lilies and violets because of their plantfulness, and in the case of pinks and fire white flowers because of their scarcity. Bull goods and green material come the nearest to a happy medium, but the only place to look for consolation seems to be Webster's Unabridged. East or Slimes before us like an oasis in the desert. Hope, blessed relic of Pandora's box!

Horticultural Hall.

The Horticultural Society must have gone into their building like a lamb. They surely are going out of it with a roaring good exhibition which suggests the old-time smile of the present month.

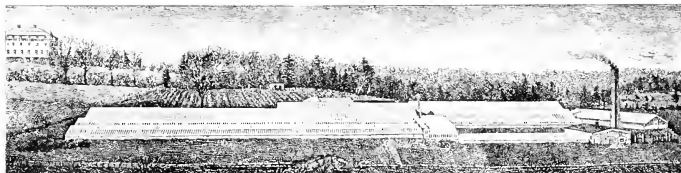

It strikes me as an unfortunate thing that the commercial fraternity is not more interested in the doings of this society and consequently better represented there. And if not from an esthetic

but low commercial growers, comparatively visited it.

In the plant classes the leading prize winners were Dr. C. G. Wedd, Bayard Thayer, Mrs. J. L. Gardner, Mrs. E. P. Cheney, Hussy Institution, W. S. Ewell & Son, E. N. Pierce & Son, H. B. Rogers, Hon. M. F. Stevens, Anson Phelps Stokes, J. G. Noyes, Harvard Botanic Garden, F. J. Rea.

In cut flowers the leading premiums went to Mrs. A. W. Spencer, Col. Chas. Pfaff, E. M. Wood & Co., W. H. Elliott, M. A. Patten, F. A. Blake, Peter Fisher, Barrett Greenhouses, W. C. Ward, D. S. Carrigan, H. S. Rand, Wm. Sim, Mrs. E. L. Ames, Gratitudes; Col. Chas. Pfaff, Magna Charta roses; Miss S. S. Walker, vase of roses; Col. Chas. Pfaff, display of roses; Charles Evans, mignonette; Norris F. Conley, blue; C. H. Souther, antirrhinum; Mrs. E. M. Gill, basket of flowers; James Conley, display; Mrs. A. W. Spencer, display; Mrs. E. M. Gill, display.

The first schedule exhibition in the new

W. J. Dana's Greenhouses, Wellesley Hills, Mass.

Goss illustrated the movements of plants influenced by light and gravitation.

W. Jordan reports that he has had quite a fire at his place the past week, causing damage to building and stock of about \$50.

C. Young & Sons Co. are very busy now with shipping orders for plants and seeds in which they do a large business.

Beyer, Schray, Sanders and Oestergag were kept busy the past week decorating department stores with plants and cut flowers.

Jessie M. Goode, of the National League of Improvement Association, states that shade trees planted this spring will be in nice condition in 1903 when the World's Fair opens. Next spring will not be such a favorable time and the spring of 1903 will be too late. This is a feature of the city improvement that should be attended to at once. All this work will be to the permanent benefit of St. Louis, if carried out as it should be, and will transform the city, giving St. Louis a charm that will redound to its credit.

J. J. B.

LINCOLN, N.B.—The wife of C. B. Keller, the florist, died March 13 of pneumonia.

"IF IN DOUBT," consult the Florists' Manual, by Wm. Scott. It covers the whole field of commercial floriculture and you can quickly find in it the experience of a practical man bearing upon the doubtful point.

THE BEST, and the cheapest—the REVIEW'S classified ads.

point of view, why do they not materialize there strictly from a financial point of view? An even hundred cash prizes on potted plants, ranging from \$1 to \$25 each, and fifty five cash prizes and two medals for excellence in cut flowers, is really worth playing for, and alone might account for a stupendous array. Couple this with both good material and arduous rivalry among both commercial and private growers, and the almost frantic zeal of the genuine flower lover and the lover of Boston prestige, and you obtain present conditions. Sixty eight prizes on fruit and vegetable ideas also add a mite to the situation, and that part of this spring's exhibition is all right, too, but was hardly participated in by persons of interest to readers of this item.

Neither do my constituents figure by any means among the potted plants. In the cut flower department we do much better. Here the E. M. Wood Co. put in a magnificent display of five different varieties of roses, ably seconded by W. F. Elliott, the Exeter Rose Conservatory's, John Pritchard, John McFarland, the Piersons, of Scarborough, and several private growers. None of them, however, had the number of varieties nor the number of points to show the judges that the Wood Co. placed. I am inclined to think their Brides and Maids never were equal.

The carnation department was fronted by Messrs. Patten, Fisher and Pierson, and such names as Conley and Sim could be found on the bunches of Violets.

But such affairs must be seen; they can not be described nor pictured. And

had I will be the rose and strawberry show, June 20 and 21.

W. J. Dana's Place.

Noting a marked improvement in the output of this place, I took occasion to go out to see if I could find "by what mighty magic" as Otello says, this was being brought about. Hard work and strict attention to business were the only ingredients I recognized in the lotion he applies, however. But he has a strictly first class range of houses aggregating something like 40,000 feet of glass, very nicely located on the southern slope of a Wellesley Hills incline, of which he takes most excellent care, largely covering pink roses and white roses, but also containing more varieties of plants than growers for the city market usually foster. His plants are first-year grafts, not now so large, perhaps, as they might be, but putting on a prodigious growth that makes one think of Easter, and more particularly of next year's product, since the plants will be left in for at least one more year's work. They are going to be heard from right away.

Mr. Dana is his own grower, pipe fitter and general manager, having reached remarkable efficiency in each respect when his few years' experience in this line of work is considered. His heating arrangements and of his own plan and work admirably. He uses a sixty-horse tubular boiler harnessed up with a five-sixty-foot chimney, to which he gives half the credit. Facilities for liquid manuring are very complete and four automatic ventilators assist in their department. The crop is marketed by means

of Salesman Minter, at the Park street market, who advertises himself as "always found and always square."
J. S. MANTER.

SWEET POTATOES.

In addition to the directions for raising sweet potato plants or "sets" as outlined by a correspondent in a recent issue of the Review allow me to offer the following suggestions:

The extensive growers of sweet potatoes in the South employ a sort of radeley constructed hothed for the starting of plants. Several inches of corn-stalks or other rough material is first laid on the ground to serve as drainage and on this fresh horse manure is placed to the depth of one foot or more and this in turn is covered with four inches of soil. The potatoes are then placed on the soil, not touching, and lightly covered. In place of glass covered sash, a covering of hay is used. In a few days shoots push up to the light in the greatest abundance. As with root cuttings of other plants, roots start at the same time or sooner than the buds, so that each shoot is really an independent plant.

When the plants are four to six inches high, they are "drawn" from the bed by a sideways pull, aided by pushing the fingers a trifle into the soil close to the plants. The plants, each of which is furnished with an abundance of fibrous roots, are then set in the field at once where they are to remain. In a few days, a second crop of plants will be furnished by the same potatoes and even a third crop may sometimes be had, although the later plants are usually weak. One bushel of seed will produce from 2,500 to 3,000 plants without the necessity of making and potting cuttings.

A similar plan may be followed in northern latitudes, except that a hothed or greenhouse may be necessary in order to have plants early enough to insure a crop. We have had excellent success here by bedding the potatoes in sand on an ordinary greenhouse bench in four inches of stud about May 15. In twelve to fourteen days the first crop was "drawn" and by June 15 the second crop was ready. A steady bottom heat of 70 to 75 degrees was maintained and the sand kept constantly moist.

The raising of sweet potato plants by this method might easily prove a profitable sideline for a florist in a small town or one who has a large number of amateur vegetable gardeners among his customers. Sound seed is essential and it should be carefully handled to prevent rot. Neither cuttings nor pots are necessary. While sweet potatoes may be grown as far north as central Wisconsin, the quality of the tubers is not as good as the New Jersey or southern grown, nor will they keep so well.

FREDERIC CRANFELD,
Wisconsin Agt. Exp. Sta.

FOR SALE—At half its value. Fifteen Hundred dollar \$1,500.00 buys six greenhouses—5000 feet glass hot water heat—plenty of good soil—also house of seven rooms, barn, sheds and 10 acres located near Chicago long lease given on land if you have the price address for particulars. A Bargain. Care Florists' Review.

WANTED To buy 2000 square feet of glass for smaller than built, packed and F. O. delivered, bought. M. C. Reers, 76 Ontario St., Cohoes, N. Y.

WANTED At once, young, single and reliable man to assist in care of three small greenhouses. Wages, with board, \$10.00 per month. A good understanding water plants is wanted. Mrs. H. E. Smith, Berlin, N. H.

WANTED—A good all around florist, a single, honest, sober man, one that will grow good cut flowers and bedding plants. Fifty dollars per month and room and right man. Must have some idea of planting out. Address W. care Florists' Review.

WANTED—At once, a thoroughly reliable, honest, upright man; one who is quick and well experienced in carnations and general greenhouse work. Size age and wages wanted, references required. N. Zewel, 11th Street and Groelung Avenue, Milwaukee, Wis.

SITUATION WANTED—By first-class grower of cut flowers, bedding plants and vegetables. Capable of taking charge of establishments. First class references. Address F. O., Box 223, Elkins, W. Va.

SITUATION WANTED—As manager and grower for a good reliable firm, thoroughly up-to-date in every department of commercial work, capable of handling men and carrying on the work in a systematic manner. Best of references furnished as to character, ability, etc. Good permanent position desired; open for consideration April 1st. Address Commercial 'Care Florists' Review.

SITUATION WANTED—By first-class grower of roses, carnations, violets and mums. Address Illinois, care Florists' Review.

WANTED—At once a man to work in greenhouse where a retail business is done. Must be a good worker, neat and energetic and one who will board in the family. State wages and give references in first letter. H. S. Baker, Warsaw, N. Y.

FOR SALE—Greenhouse—1000 feet of glass, room for 200 more. Windmill large tank, 2 lots, brick, concrete—5 rooms, barn. City 20,000 population, 70 miles to Chicago. Splendid location for florist business. Address 300 N. Chatham Street, Racine, Wis.

FOR SALE—Fine greenhouse property in Southern Wisconsin, 15,000 population, 5000 feet of glass, 5 minutes' walk from post office; street cars pass the door; residence connected with office; doing a splendid business. For particulars, address R. care Florists' Review.

POSITION WANTED—This spring, set Boston, by an up-to-date grower, as working foreman, on a good clean place; strictly temperate; have had large experience with roses and carnations, stock of good required; married; age 30; one child. Give full particulars to "Englishman," care Florists' Review.

FOR SALE—Or to let for a term of years the Mountain Villa Conservatories, containing about 1000 ft. of glass well stocked. Address Box 34, Sharon, Mass.

SITUATION WANTED—As a good all round florist growing roses, carnations, etc.—capable of taking full charge; single; 21 years' experience. Address N. care Florists' Review.

SITUATION WANTED—By thoroughly experienced cut flower grower, 11 years in this country; single; references. Address K. care Florists' Review.

WANTED—Several men as assistant rose growers. Apply ready to work to Eassey & Waburn, Hinsdale, Ill.

WANTED.

Man to take charge of store, in western city. Must understand both retail and wholesale trade, and be a good maker up of a desirable stock of good, permanent place for the right man. Don't apply unless you have first-class references as to reliability and trustworthiness.

Address L. O. A., care Florists' Review.

FOR SALE.

Controlling interest in a first-class nursery company, doing a good and paying business, both local and shipping trade, well stocked and a good stock coming on. Location the best for living and growing stock. Long established. Address OWNER, care Florists' Review, Chicago.

BURLINGTON, IA.—At a recent meeting of the park commissioners action was taken reducing the superintendent's salary to \$420 a year and allowing but \$300 for the purchase of plants this year.

THE Review's classified ads. are a great convenience in the verdict of the buyers. "It is so easy to find what you want."

IMPROVED Greenhouse GLAZING POINTS.

Positively the best made. Zinc, never rusts, lasts forever. A superior substitute of glass slipping. Effective on large or small glass. Easy to drive, easy to extra. Two sizes, 5 and 8 in. 40c a pound, by mail. Also extra 7 pounds for \$2.50, by express.

- FOR SALE BY:

 - Thas. I. Siebert, Mgr. Station B, Pittsburg, Pa.

KIND WORDS NEVER DIE.

CHAS. T. SHERBERT—I take pleasure in expressing satisfaction on in using your Zinc Glazing Points. They have outlasted all others used, they are better and cheaper. Their merit should result in extended sales. Sincerely yours,
THOS. F. DE KRIE, Florist.

CHAS. T. SHERBERT—Enclosed had M. O. for more Zinc Points, the same as others sent. They are decidedly the best we ever used. Respectfully,
JOHN A. SMITH—S. S. S. ELKINS, PA.

CHAS. T. SHERBERT—Please book my order for 100 lbs. of Zinc Never Rust Glazing Points. I have used 5 different kinds of points in the last 12 years, and none of them gave me satisfaction like yours. They will stay in, are easy to drive, no rights or leets, will hold the glass in place, and do not rust away like all others I have used. Your Zinc Points are easy to take out when making repairs. I have used about 100 lbs. of your Zinc Points in the last two years, and I am perfectly satisfied with them. Yours truly,
F. BUKKI

CHAS. T. SHERBERT—In our 25 years experience in glazing points of all kinds, I can say your Zinc Points are the best to date.
J. H. WILSON,
Mgr. for Grant-Willson Floral Co.

CHAS. T. SHERBERT—Please had inclosed check for \$3.00 for which send me 10 lbs. more of your Zinc Points. To my way of thinking, too much cannot be said in their favor.
Yours truly,
E. HILFARD.

CHAS. T. SHERBERT—We have used the 20 lbs. of Zinc Glazing Points, and think they are the best things we have ever used for glass. If we need any more we will order from you. Yours very truly,
W. H. HAYMOND, Florist.

WASHINGTON.

Trade Conditions.

With exception of funeral work, business during Lent has been somewhat slow. Prospects for Easter look very bright in regard to lilies.

Gude Bros. say: "We may possibly have enough for our own use, but none to wholesale; other stock more than ever and everything in fine shape." J. R. Freeman's lilies will not be in, but other stock is in abundance. American Rose Company will be left on one whole house of lilies, but at the same time will have enough to go around. White Ivory, their new rose, will be in full crop. J. Louis Looe's lilies will partly be in; will have plenty after Easter. C. Schellhorn's last planted ones will be in line; his early planting will be late. Azaleas, Ramblers and other blooming plants will be plentiful. Most of our local growers have realized nothing from their azaleas this season. For the last month fine plants could be bought at cost and the majority under cost.

The way Virginia violets are now coming in is more of a nuisance than a glut. Single dealers are getting as high as 50,000 to 75,000 per week and they bring hardly \$1 per 1,000.

From the looks of some of our uptown dealers' places a person would think they were dry goods stores, from the way the windows are pasted up with paper signs and the plants almost completely covered with crepe paper, which really lessens the value of a fine plant.

The firm of Litzinger & Wade has dissolved partnership. All indebtedness will be assumed by Mr. Louis P. Litzinger, who will continue the business.

Mr. Charles L. Schmidt, of S. S. Pennock's, was over picking up some Easter orders.

Paul Berkowitz and Mr. Eschner, of Philadelphia, were among the callers.
 F. H. KRAMER.

LOS ANGELES, CAL.—The prize list for decorated vehicles and floats for the annual feast of flowers to be held May 8 has been issued, and it amounts to several thousand dollars.

NOT AN INSECT.

Find enclosed cutting of a fern. Will you kindly advise me through the columns of your publication if it is an insect or what it is on the plant. Also state what would prevent it from spreading, and oblige, E. H. D.

[The frond is fruiting and what you have taken for insects are simply the cases containing the spores, through which ferns reproduce themselves.—Ed.]

“The Work of Civic Improvement” is the title of a very prettily illustrated and useful booklet issued by The Home Florist, of Springfield, O., under the auspices of the National League of Improvement Associations. It gives a very comprehensive review of the work of local improvement associations and the means employed to beautify cities and towns where these associations exist.

The Henry W. Gibbons Co., New York, have issued a neat pamphlet, entitled “How Roses Are Grown,” and containing an extract from one of the bulletins of the American Rose Society.

From a daily paper we gather the remarkable information that “A new lily is shown this year, which is called the Har-rasi and which is a more sturdy lily than the Bermuda, from which it is a descendant.” It takes the average reporter to find interesting and accurate news.

STAMFORD, CONN.—Edward B. Jackson will this summer build 700 running feet of cold-frames, giving him 9,000 feet of glass in cold-frames alone.

100,000 Pansies

A CAULIFLOWER COMBINE.

Cauliflower is a wholesome vegetable, but it requires careful handling to keep it at its best possibility. This is one reason a number of farmers on Long Island have just combined as a Cauliflower Growers' Association. Their plan is to issue 1,000 shares of stock of the par value of \$5 each, the several shares each representing an acre of cauliflower. The association will have a manager to attend to the business of marketing cauliflower judiciously and profitably, and it is thought the farmers will find it a profitable arrangement. There has been too loose a conduct of the cauliflower industry, they believe, and it will well to make the public comprehend how important it is that cauliflower should be served fresh, and at fair prices for good specimens.

PITTSFIELD, ME.—C. C. Woodruff is planning to build a greenhouse to cost \$1,000.

BERLIN, N. J.—The greenhouses of Geo. J. Hughes were destroyed by fire March 8.

MITCHELL, S. D.—E. C. Newberry is building a new rose house 24x114.

LOUISVILLE, KY.—Wm. Walker will soon build a new house.

NASHVILLE, TENN.—Louis Hairy has built a range of eight houses for the growing of plants and flowers.

A GARDENER KING.

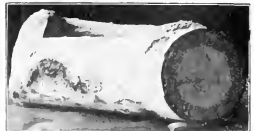

In a German periodical appears an article upon the dynasty of the kings of Cambodia, in which is told the following tale of its origin: "In 1333, there was a gardener who became celebrated for the excellence of his cucumbers, so much so that the king, who had a great liking for this vegetable, ordered him to reserve the entire output for his own consumption. To make certain that none of the cucumbers were stolen, he instructed the gardener to have his garden watched night and day. One night, in order to see that his orders in the matter had been carried out, the king stole out into the garden by himself, was taken for a robber by the watchful gardener, and promptly killed. As he left no heir, there was great trouble about the succession, and a way out of the difficulty was found by making the gardener king. Since that time his descendants have sat on the throne of Cambodia."

SOUTH FRAMINGHAM, MASS.—David R. Woodward, the florist, died recently, aged 58 years.

JAMESTOWN, N. Y.—Mr. A. N. Broadhead, of the Lake View Rose Gardens, has decided to erect a range of ten large rose houses and will use the Garland iron gutter throughout. Construction will begin at once.

SOUTH BEND, IND.—August Beyer enjoyed a three months' trip to the fatherland last summer and after visiting all the best gardens and greenhouses, as well as the Paris Exposition, he returned with the feeling that America is ahead of the rest of the world in the florist line.

Mention The Review when you write.

Above shows my experience, care and selection of first-class bulbs.

I have an immense stock of the finest and choicest in the market, and in such quantities that exceed anything that I ever had and offered before. You would be astonished if you could take a look in seven (7) large greenhouses and an equal number of hotbeds which are filled to the fullest extent, and devoted to the entire cultivation of Easter plants alone. Therefore I will be prepared to fill all orders, if sent in time, as far as the supply will reach.

Azalea indica. I am one of the largest importers of these choice Easter plants and have about a thousand more than last year. I raised these in large houses, 30x115 feet, erected for the cultivation solely of these plants. These azaleas were selected by myself last fall on my second trip to Belgium and as I am agent for a large concern there it gives you a chance to purchase your goods at first hand and not through a middleman. I have only new stock; none left over from a year ago. I can offer you plants in bloom, or buds, blooming Easter week, 6-in. pots, 20 cents up to \$1.00 each. Most of them Mme. Vander Cruyssen, and some other of the best varieties which will be selected by myself. I have some fine specimen plants, 10-11-in. pots, 20-22 inches across, very large (Mme. Vander Cruyssen), of good shape and full of buds, \$2.00 each, easily worth \$3.00. Weight, with pots, 27 lbs., weight without pots, 17 lbs.

Anacaulia excelsa and glauca in excellent shape, 3 tiers, 5-in. pots, 60c; 7c and \$1.00 each. Very fine specimens, \$1.50 and \$2.00 each, worth \$2.

Spiraea compacta and floribunda. Fine bushy plants, my own importation; perfect buds; 5-6-in. pots, \$3.00 per doz.; Specimen plants, \$4.00 per doz.

Hydrangea (Olds), 5-6-in. pots, \$2.00 to \$4.00 per doz.

Cineraria hybrida. Choice colors, 6-in. pots, \$2.50, \$3.00 and \$4.00 per doz. in bloom now or at Easter. I have a house full of them.

Begonia. President Carnot and Semperparvum giganteum, also some other varieties, 6-in. pots, \$2.00 to \$4.00 per doz. Veron and other good blooming varieties, 4-in. pots, \$1.20 per doz.

Headquarters

...for...

Easter Plants

BLOOMING EASTER WEEK.

Daisies (white) Marguerite. Fine bushy plants, 5-in. pots, \$2.00 per doz.; 4-in., \$1.00 per doz.

Lilium Longitorum and Harrisii. Fine plants, raised from bulbs, 7x3, obtained of the well known firm of Henry F. Mitchell, 6-in. pots (from 5 to 10 buds to a plant), at the rate of 50c per bulb. Height, 32 to 34 feet. No lilies sold by themselves; other plants must accompany them.

Cyrtus (Umbrella plants), 4-in. pots, \$1.00 per doz.

Corypha australis (Palms), fine plants, 14-15 in. high, \$2.50 in pots, 50c each.

Dracaena indivisa (imported), for decoration; 6-in. pots, 50c each.

Hyacinths (Dutch named), strictly my own importation, raised from bulbs that cost from \$6.00 to \$8.25 per 100. These fine hyacinths I am selling at the rate of \$10.00 per 100; extra choice, \$12.00.

Tourensol Tulips (double red and yellow striped), 3 in a 4-in. pot. They are simply beautiful and sell at sight, \$1.50 per doz. pots.

Daffodils (Von Stom), double nose, 3 in a 5-in. pot, from \$1.50 to \$1.75 per doz. pots.

Geraniums, 3-in. pots, Mme. Tibbaut, Pilot, and some other good varieties, \$5.00 per 100.

Cash with order, please. Money can be sent safe by express, postal money order, registered letter or drafts on Philadelphia or New York banks. At such a busy time (packing and shipping) I have no time to inquire into recommendation letters. All goods shipped at purchaser's risk.

State if plants are to be omitted out of pots to save express charges or not.

Mr. G. Aschmann has very fine healthy Azaleas, Hydrangeas, Easter Lilies, Spruces, Tulips, Hyacinths and other plants in bloom and bud. We can very highly recommend our customers to Mr. Aschmann for fair, reliable business treatment. Signed, H. S. F. MICHIELL, 1018 Market St. Philadelphia, Feb. 21, 1901.

There is nothing too much said in Mr. Aschmann's ad; all that is said is true. Signed, THOS. LUDAN, Ashbourne, Pa. Head gardener to W. L. Elkins, Jr.

No use a-talking—Mr. Aschmann has a fine lot of Easter plants, and I can recommend him to any one, as I have known him for the last 20 years. Signed, GEO. HUSTER, 1018 Market St. Philadelphia, Pa.

Mr. Aschmann has a large stock of fine Easter plants, and am greatly surprised at the low prices he quotes on same. Signed, WM. KLEINHEINZ, Head gardener to P. A. B. Widener, Esq., Ogoutz, Pa.

GOFFREY ASCHMANN, 1012 Ontario St., Rising Sun, Philadelphia, Pa.

...DREER'S...

Novelties and Specialties

Campanula Isophylla Mayii.

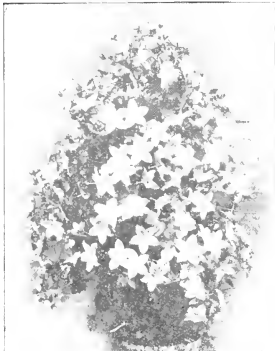

In this new Bell Flower we have one of the most important and valuable novelties of the season, and a plant that with only ordinary care can be grown by anyone; a plant for everybody. It succeeds best as a pot plant grown in a half shady situation, and may either be permitted to trail over the sides of the pot or staked and grown upright, under either condition it becomes one mass of flowers of a pleasing light blue color, and are produced continuously through the summer. Strong stock plants in 4-inch pots, 50 cents each; \$5.00 per dozen. Good young plants in 2-inch pots, 25 cents each; \$2.50 per dozen.

Deutzia Gracilis Rosea (new).

Identical with Gracilis in general habit, but with flowers fully double the size of that graceful variety, to which is added the additional charm of being suffused with a delicate rose tint, just sufficient to relieve the dead white which is objectionable in the type, and which will undoubtedly place it in the front rank of shrubs for winter forcing. A limited lot of one-year-old plants. \$2.00 per dozen; \$15.00 per 100.

Anemone Japonica Queen Charlotte.

The finest of all the Anemones, and a grand summer and fall cut flower. Strong 2½-inch pots, 75 cents per dozen; \$6.00 per 100.

Campanula Isophylla Mayii.

New Adiantum Charlotte.

Our illustration gives a fair idea of the beauty and grace of this new Maidenhair; it is entirely distinct from all other varieties, and even more graceful than A. gracillimum, and possessing the advantage of having much stouter, stiffer stems, on account of which it forms more shapely plants, and increases its value for cutting purposes. Specimens of this handsome sort shown at the exhibitions of the Penna. Hort. Society during the past two seasons attracted the attention of all lovers of Ferns. Strong, 4-inch pots, 35 cents each; \$3.50 per dozen.

Montbretia Crocosmiaeflora Germania.

This new giant Montbretia has been under our observation for the past four years. It grows about 3½ feet high, is of sturdy habit, much branched, and produces most graceful spikes in the greatest profusion. They are well furnished with large six-petaled, widely expanded flowers, measuring over 3 inches across, probably the largest of the genus. The color is a rich glowing scarlet, shading to brilliant orange, with a blood-red throat. The buds and also the reverse of the petals are blood-red, a most striking combination of colors, making a grand effect. 20 cents each; \$2.00 per dozen; \$15.00 per 100.

Polygonum Baldschuanicum.

A hardy climber of recent introduction from the mountains of Turkestan. It is of very rapid growth, frequently growing from 10 to 12 feet high in one season. The stems are twining and cling for support to any object within reach. Every branch terminates in a panicle of white flowers, which are produced in the greatest profusion from July to September. A plant that is certain to meet with popular favor. Strong plants, 75 cents each.

Tuberous Begonia, "Duke Zepelin."

A most useful and attractive variety that should soon become a favorite for bedding, possessing the great advantage over other tuberous-rooted Begonias of delighting in full sunshine. It is of dwarf habit, growing from 6 to 8 inches high, throwing up well above the foliage numberless stems bearing full, double dazzling scarlet flowers, giving the whole plant a brightness, grace and elegance difficult to describe. Strong bulbs, 20 cents each; \$2.00 per dozen; \$15.00 per 100.

Frilled Tuberous-Rooted Begonia.

A most unique form, with very large single flowers which are entirely distinct from anything heretofore offered, the petals being wavy and beautifully frilled on the edges, similar to the newer forms of Petunias. A decided acquisition. Strong bulbs, 25 cents each; \$2.50 per dozen.

Frond of Adiantum Charlotte.

Montbretia Germania.

Cactus Dahlias, Aezir, Loreley and Strahlen Krone.

Introduced by us last year, are three gems, and no collection is complete without them. Strong roots, 15 cents each; \$1.50 per dozen; \$12.00 per 100.

Twelve Choice Japanese Tree Paeonias.

We can supply twelve of the finest Japanese varieties in strong heavy plants, 80 cents each; \$9.00 per dozen.

Yucca Filamentosa Bicolor.

This elegant plant has proven entirely hardy with us the past winter. We offer good, one-year-old plants, 35 cents each; \$3.50 per dozen.

Our new Quarterly Trade List which has only recently been distributed, offers a complete line of all the leading novelties, together with a full line of reasonable stocks, with full lists of our specialties, as Decorative Plants, Water Lilies and Aquatics, and the most complete list of Hardy Perennials offered in this country. If you have failed to receive a copy advise us.

GEO. A. SUTHERLAND,

TELEPHONE MAIN 1270

34 HAWLEY ST., BOSTON, MASS.

A PRE-EASTER RAMBLE.

With Robert Craig,

It was a glorious morning, clear and crisp, with scarce a touch of spring's mildness in the air, when I reached my destination. First came a chat with William P., who seemed to feel that a point of difference between Andrew Carnegie and himself was that while the steel king voluntarily rained libraries, he was obliged to rain papers. Every member of the club will agree with me in my support of the chairman of our essay committee: the papers were good and, like *Oliver Twist*, we ask for more.

Now, the man who taught me the possibilities in this business of hard work and slow advancement, but that is full of absorbing interest, appeared and we are off to see his place.

Five houses full of Japan grown lilies in grand shape, and, most important, on time. There are single stems, double stems, three stalks and four stalks to a pot, all well feathered and hard as nails. Several houses of azaleas follow, the feature of interest being the loose, graceful appearance of some of the plants, a departure from the Belgian closely trimmed type, which the buyers should encourage as they did the bouquet of today when it fought for supremacy with the stiff camellia centered bunch of our forefathers.

Then came some acacias and six plants of miniature cherries in pots, trimmed in true Japanese style and ready to burst into flower.

Spirea astilboides was well done in single plants. I missed the quartette in 16-inch pans, last year's novelty. Then *Crimson Rambler* roses, unusually shaped, the surface looking like an azalea crown, full of buds. *Hydrangeas* were there, well set with buds, and the first detachment of bulbs in pans, timed for the greatest event of the year to the church and the florist.

The morning was finished with a run up to "Wills", where, as his father truly said, the carnations are exceptionally well done.

SOME STORIES.

During a discussion upon bedding plants at a recent meeting of the Chicago Florists' Club a reference to the treatment plants often receive after they have been delivered to the buyer brought out some good stories.

Mr. Buettner told of an azalea that was delivered in fine condition at the kitchen door of a residence and the next day he was sent for to explain why the plant had no leaves or flowers left. On investigation he found that the cook, fearing the plant had been chilled during delivery, had set it on the stove awhile to take the chill out.

He told of another lady whose azalea was not doing well and who gave assurance that instructions had been carefully followed. She had not failed to "water it every day." He called and found the plant in a copper jardiniere and the water nearly to the top. She could not have watered it but once or twice more with safety to her carpets.

He had filled a vase of plants and the next day on going by discovered the coachman playing a heavy stream of water on the plants with all the force he could give it. He was so angry he went in and punched the coachman's nose, which seems a very effective way of conveying a hint.

This reminded Edwin Kanst of a story of a man-of-all-work who was discovered playing the hose upon plants in the manner described by Mr. Buettner. When called down he responded: "You can't tell me anything about handling a hose. I was in the fire department for three years."

Referring to the azalea incidents, Mr. McAdams said they sent with each plant a printed slip giving explicit instructions as to what to do and what not to do.

WORCESTER, MASS.—The first exhibition of the year of the Worcester County Hort. Society brought out a fine display March 14. Cinerarias, cyclamens and the bulbous stock was especially fine.

KNOXVILLE, TENN.

The recent action of Prof. Scott, state entomologist of Georgia, in prohibiting the shipping of nursery stock from Tennessee into Georgia has been the cause of considerable discussion among the nurserymen of this state. A bill has been prepared and will be presented to the general assembly to create the office of state entomologist to inspect the nurseries of this state. N. W. Hale, of this city, is chairman of the committee having this bill in charge.

Prof. Scott's action did not precipitate this movement, as the initiative was taken by the appointment of that committee at the meeting of the East Tennessee Horticultural Society in September. Mr. Hale, in speaking of the proposed bill, said:

"At present, the state of Tennessee has no officer or law to protect the nurseries. The nursery stock in Tennessee is as free from disease as that of Georgia, but the action taken by Prof. Scott was merely carrying out the provisions of the Georgia law. This provides that no state shall be allowed to ship nursery stock into Georgia without its being inspected. The University of Tennessee has been making inspections, but as there is no law to protect them, these have been discontinued. This is what precipitated the action of Prof. Scott. All the large nurseries of Tennessee favor the passage of this bill and have requested that such be done. Unless it is passed in a short time our state will be debarred from doing nursery business with several other states, while other states can unload all their diseased stock on Tennessee."

A NEW FERN.

W. H. Hoffmeister, Fort Madison, Ia., sends us a photograph of a group of plants of a seedling nephrolepis that he found among his ferns some time ago. It is similar to the Boston fern and Mr. Hoffmeister reports that it is a rapid grower and makes fine specimens in a very short space of time.

BUCKLEY'S Plants and Rooted Cuttings

Calla lilies, sm'l blooming bulbs	50	Orange Otaheite	50		

Our Wholesale Catalogue is now ready and will be mailed to all applicants. Write for it, as our prices will be sure to interest you.

THE GOOD & REESE CO.

The Largest Rose Growers in the World.

SPRINGFIELD, OHIO.

Nephrolepis Wittboldii.

Plant of *Nephrolepis Wittboldii*.

If you have'nt yet obtained a stock of this grand new commercial fern you will make a mistake if you do not do so at once. A dozen plants now will be the best investment you ever made.

HENRY A. DREER,
of Philadelphia, says it is

“A Most Valuable Decorative Fern.”

All who have bought it recognize it as possessing those qualities that will make it a money maker from the start.

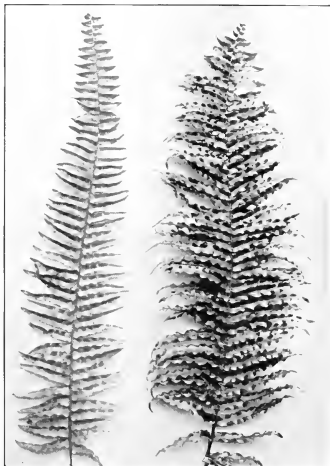

A. J. BALDWIN, Newark, O., says it is
“The Great Fern of the Future.”

J. PAULUS, Chicago, says:
“In reproducing
it equals the Boston Fern.”

Remember we are not sending out weak, puny plants, but Strong, Vigorous Stock that will immediately produce runners if planted out in the bench.

We are offering fine plants, ready for 3 and 4-in. pots,
at \$1.00 each, \$10.00 per doz.,
\$75.00 per 100.

See our offers of **PALMS, FERNS, ASPARAGUS, ARAUCARIAS**
and **FIGUS** in Classified Advs. in this issue
of the Review.

Frond of *N. Bostoniensis*.

Frond of *N. Wittboldii*.

THE GEO. WITTBOLD CO., 1657 BUCKINGHAM PLACE, CHICAGO.

CHESTNUT HILL, PA.

The regular meeting of the Chestnut Hill Horticultural Society was held on the evening of March 12th. President John T. Morris presiding. Wm. Kleinheinz, gardener to P. A. B. Wildener, Ogontz, Pa., read a very thorough paper on carnation growing, taking up in detail the propagating, planting and care of stock, as well as the varieties he finds most satisfactory.

The following premiums were awarded: Three cinerarias—first, to Geo. Robertson; second, to Geo. Morrison. Three cyclamen—first, to Geo. Robertson. One plant of *Deutzia gracilis*—first, to Geo. Robertson. One azalea, not over 8 inch pot—first, to Michael Punch, Germantown; second, to Hans Reuter. Vase of twelve double daffodils—first, to Robt. Forrest, Jenkintown, Pa.; second, to John Little. Vase of twelve single daffodils—first, to Wm. Boyce. Vase of twelve Bride roses—first was awarded to a very handsome vase which was exhibited by Wm. Robertson. This same exhibitor also took first with a vase of Bride-mail. Wm. Kleinheinz being second. John Little won first on a collection of vegetables stored for winter use, Geo. Robertson being second. Best three heads of lettuce—prize was taken by Harry Harris. For two heads of cauliflower—premium was taken by Wm. Robertson, and Robert Forrest secured the first award on collection of vegetables grown under glass. Special premium was awarded to Hans Reuter for an exceptionally good collection of flowering plants, including azaleas, orchids and cypripediums. Special premium was also awarded to James Bell for two vases of violets; these were not called for on the premium list, but were exceptionally fine.

In addition to these, a number of growers sent carnations as follows: A handsome vase of fifty Mrs. Thomas W. Lawson was received from Peter Fisher. This bunch was admired by all and certainly showed it had been grown by a master in the art; though having been shipped a long way, the blooms were in good condition. The same can be said of a vase of fifty Queen Louise sent by J. Dillon of Bloomsburg. This is certainly a good variety and appears to be an excellent keeper.

Mr. Ward, of the Cottage Gardens, Queens, Long Island, sent a very fine collection, including the following: J. H. Manley, Governor Roosevelt, Viola Allen, Mrs. Lawson, Novelty, Harry Penn, Marquis, Golden Beauty and Morning Glory. Of this lot, Governor Roosevelt, Mrs. Lawson, Marquis and Morning Glory showed to advantage, while J. H. Manley and Novelty seem to be extra good varieties.

Messrs. Crab & Hunter, Grand Rapids, Mich., sent their Irene, but unfortunately, the shipment was not received until the following day. This is a flower of exceptionally good color, of good size, and seems to be a good keeper. The writer regrets that these blooms were not received in time for the exhibition.

At this meeting there was an attendance of 93, of whom 64 were gardeners. We feel that this showing augurs well for the success of the society during the coming year. Schedule for the fall show, which will be issued shortly, will contain special premiums to the amount of about \$200 and also a silver cup. These items are in addition to the regular premiums which will be offered by the society.

J. HOWES HUMPHREYS.

Clematis Paniculata

100,000 SHRUBS.

Hydrangeas, Roses,

SIEBRECHT & SON : : NEW ROCHELLE, N. Y.

POTATOES AND CELERY.

Extracts from a paper on "Gardening for Exhibition" read before the Massachusetts Horticultural Society, Boston by Herbert E. Kinsley:

I have raised potatoes of fair quality and smoothness on very heavily manured market garden land, but they are not a crop that responds to heavy manuring. To grow the best and handsomest potatoes possible I would use no manure the year the potatoes are planted, but from 1,000 to 2,000 pounds of good fertilizer per acre, about one-half broadcast and one half in the drill, thoroughly mixed, using large seed cut to two-eye pieces, and planted the 1st of May in drills 18 to 22 inches by 30 to 42 inches apart (the latter distances for the late varieties). Give thorough cultivation and plenty of Paris green and Bordeaux mixture, and you should have potatoes of the best quality.

As to celery, if you would have a shouldered head of nice proportions and not too tall, the plants must be set ten or more inches apart; but if you want nice celery for family use or market, from four to six inches should give a more satisfactory crop. To get celery of the best quality it must be grown rapidly, and it is quite important that it should take an extra start when we begin to blanch it. Celery that is banked with earth gets this start from the cutting of the roots, and the chance that those roots which are left get to work up into the soft earth of the bank. Perhaps the best way to start golden celery that is to be blanching is to give a good watering and work the ground about the time the boards are set up. This gives celery of fair quality; but no method will give as good celery in the early fall as can be produced later when the weather becomes cooler. Celery grown in this way will not keep so well as that of poorer quality.

PHILADELPHIA, PA.—Albert Smilling has given Charles S. Bambo, contractor, a contract to build a large, handsome greenhouse, stone, brick, iron and glass, at 6110 Ridge avenue.

CHESTER TOWN, Md.—Fire did serious damage to the greenhouses of Charles B. Smart the morning of March 15.

EVANSTON, ILL.—John Weiland will add some new houses to his establishment on Greenwood boulevard.

VERMONT PLANTS.

Some interesting statistics of Vermont plants are sent out from the Vermont experiment station. These figures are taken in part from the new flora of the state, published by the Vermont Botanical Club.

According to this publication there are now 1,563 species of ferns and flowering plants known to occur or cultivated in Vermont. Of these, 79 species are of trees, including 11 species of oak, seven kinds of maple, six poplars, four pines and four birches. These are mostly useful, but there are 80 species of weeds, some of which are pernicious and promising trouble.

Out of the present census of 1,563 species, 270 have moved into the state since the country was settled. Many of them have come mixed with agricultural seeds, or have been introduced directly or indirectly by artificial means. A large proportion of these newcomers are imitations from Europe, and only a minority of 60 or less have come to Vermont from other states or from Canada.

DELUKE, MIXEN.—John Richter is now with W. W. Seekins.

success. The use of the application "Old-trench Plume Chrysanthemum" for Mrs. Alphens Hardy, and of the "Memorial Rose" for Rosa Weichmann, were equally profitable for results. But many other popular names were not descriptive and were meaningless in their application. The offering of a money prize for a suitable name was the natural outgrowth of the first principle, and for a time was a potent agent in attracting customers. All these are interesting as manifestations of the evolution of American horticulture. The catalogue trade in plants, influenced no doubt by the cut-flower market, is given up largely now to roses, chrysanthemums, carnations, etc. Twenty-five years ago there was a larger collection of plants offered than today. This is somewhat to be regretted. The green-houses on large private places are mainly devoted to growing out flowers instead of collections of choice and greenhouse plants. For this reason they are not so interesting to visitors, not even to the owners, and a return to the former vogue would be an improvement.

The period which we are contemplating saw the rise of the climax, and the partial fall of the ornate bed-in-outdoor bedding, and carpet system of indoor bedding. That it was carried to excess is undeniable. It is questionable taste to show prize fighters and elephants in ornamental beds of plants. Butterflies could be tolerated, flags are not so bad; but ships that do not sail and railroad trains that never go can only be regarded as monstrosities in lawn decorations. This school of gardening was vigorously attacked in the house of its friends by William McMillan at the convention of the Society of American Florists in 1880. At the World's Fair in '93 it was conspicuous by its absence. The pendulum swung too far the other way there, the railing came, and we are promised some ornamental bedding at the Pan-American Exposition in Buffalo this year.

The Society of American Florists, founded in 1885, brought about a concentration of effort otherwise impracticable if not impossible. A trade press was established through which intelligence was disseminated. The annual meetings brought men together and ideas were exchanged, rivalry was fostered, and ambition received a spur. Florists' clubs and gardeners' associations have sprung up in all the large cities. We have the Rose Society, the Dahlia Society, the Florists' Mail Association and the Florists' Protective Association. New plants are officially registered; printed labels are in general use in the shipping trade; hotels and private residences are buyers of exotic plants; one may order in New York to have flowers delivered in Paris, London or Berlin. These are a few of the milestones in a quarter-century's progress. In that period we have seen introduced the Bermuda Lily, the Crozy canna and their seedlings; we have seen roses propagated during the summer and distributed by millions and tens of millions by mail and express; we have seen the home grower successfully compete in huddled rows with the foreigner; cheap and good land with energy plus have beaten cheap labor; we have had Asparagus plumosus and progeri; we have had the Crimson Rambler rose; we have seen the bay trees dot our streets; we have seen great botanic gardens like the Bronx brought into being; we have seen the wonderful development of the

Arnold Arboretum, the Metropolitan system of parks in Boston, have seen the Rock Bay Fens converted from a swamp into a garden, and here I desire to say that in all which tends to the advancement of horticulture along its best and broadest lines, the Massachusetts Horticultural Society has played and is playing a most prominent part. The Boston fern has impressed itself on the horticultural life of the day. Begonia Gloire de Lorraine has appeared, and this reminds me of how much we owe to Lemme, Bonart and other foreign hybridizers for improved heliotropes, syringas, begonias, tubasias, pelargoniums, chrysanthemums, fuchsias, etc. There are other plants which I shall give the quarter century, but I feel that I have named enough to show the progress made.

FROM OUR ENGLISH EXCHANGES.

The Gardeners' Chronicle.

Largest Trained Chrysanthemum.—We have seen plants of 5 feet to 6 feet in diameter at the shows of the National Chrysanthemum Society, and plants grown in Japan of 9 feet in diameter have been figured in this journal. The Japanese are clever cultivators, and plants of very large size are obtained by grafting branches of one or several varieties on to those of a mother plant, and thus extending it laterally on a fence or an indefinite length.

Margarites.—The grubs in the leaves of your Margarites are the maggots of mining larvae of a fly, *Phytomyza nigra* Curtis. It will be best to remove these leaves which are worst disfigured; the maggots in the other leaves may be crushed between the thumb and finger. Spray your plants occasionally with a solution of Quassia, which will make them less tasteful to the female *Phytomyza* that lays her eggs upon the leaves.

Montbretia and Iris Disease.—The spotting of the flag Iris-leaves is caused by a fungus (*Heterosporium gracile*), which is abundant on the specimen. The leaf-spots so characteristic of this fungus on Iris, are not shown on the Montbretia, where the disease appears as an irregular, dark-colored coating of fungous filaments over all parts of the leaf and stems; spores with the same appearance as those on the Iris, and evidently identical, are abundant. It is therefore probable that this fungus already occurred on several genera of Iridaceae, also occurs on Montbretia.

Solanum capsicastrum Disease.—The fungus on the shoots sent is the Tomato-leaf Rust (*Cladosporium fulvum*). We have previously found it, as in your case, on other species of Solanum. No doubt, as you suggest, forcing treatment has rendered the young shoots susceptible to attack. The fungus is not difficult to check. You say it occurs as yet only here and there; then prune off the parts where it occurs. Spraying with potassium sulphide (1 oz. in each gallon of water) is generally successful with Tomatoes, if begun early; but with your Solanums it might be well to try this strength on a plant or two, to ascertain whether it does damage to the foliage. If so, more water must be added. If the same house, or a Tomato-house, is to be used next year for this plant, it should be previously washed down with a disinfectant.

Panulium Veitchii.—This in common with other species of the Screw Pine requires a stove temperature, and there-

fore, in need of a large amount of water, and winter should be suitably secured against the danger of frost. Do not even in the summer, after the cessation of frost, allow a heavy rain to fall on the plants, and provide carefully for the drainage. In winter, if the plants are crowded, considerable quantities of water should be essential the water should be forced down through the soil. Good water is encouraged by affording the plants a good shade, in the absence of which the bottom portions of the leaves become pale, green or faint yellow color. The plants should now be given less exciting treatment than they will need in spring, with the decreased temperature less water should be afforded, and the atmosphere may be kept less moist.

Lacina Fading to Blossom.—These plants flower on the stronger of the annual growths, and the better practice is to cut out some of the older parts of the vine, lying in an equal or greater number of strong young growth, tipping them to induce laterals to push. All other shoots of the year's growth should be spared up to an inch in length. Do not let the plants form a tangle of shoots, but thin them a little, and let the finer ones hang free from each other. The border or tub in which the plant is grown should contain plenty of nutriment, and the present is a suitable season to attend to this matter. Let the drainage material be efficient, but not excessive in amount; make the soil fairly firm, and in the height of the season afford mild manure-water or mineral dressings occasionally, but do not afford this sort of assistance after July, or the growth will be extended to too late a date, and will not ripen sufficiently to flower satisfactorily. Do not afford shade to the plant at any time, and let it occupy a sunny situation. The plant never burns.

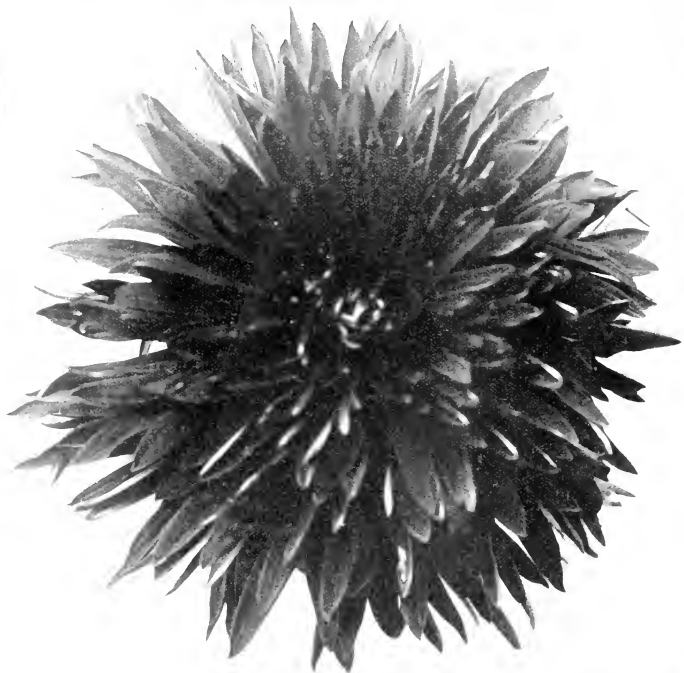

International Congress of Rose Growers.—The Journal of the National Horticultural Society of France, in its number for October, has a full report of the proceedings of the Congress on June 14 last. Amongst the interesting papers read on that occasion was one by Mr. Guillot on the classification of Roses for garden purposes. For this purpose, M. Guillot establishes seven groups among hybrid perpetuals, viz., 1 group, illustrated by Charles Lefebvre, bright red carnine; 2, General Jacquemont, brilliant red; 3, Jules Margottin, cherry-red; 4, La Reine, lilac-rose; 5, Souvenir de la Reine d'Angleterre, brilliant rose; 6, Triomphe de l'Exposition, red crimson; 7, Victor Verdier, carmine-rose; 8, Geant des Batailles, fiery red; 9, Madame Laifay, deep rose; 10, Madame Beaugrand, flowers white, flushed with rose. Each of these groups is distinguished by characteristic features, which are given at length, and a list of varieties belonging to each is also given.

The Gardeners' Magazine.

Begonia Moonlight.—This beautiful begonia is by no means new. It is, however, a very scarce plant in cultivation, though now it has been proved amenable to the same treatment as secures success with the charming Begonia Gloire de Lorraine it is highly probable its cultivation will be extended. Begonia Moonlight was raised by the late Colonel Trevor Clarke, who was a great hybridist, by crossing B. Dreggii with B. Pearcei, the latter one of the forerunners of tuberous begonias.

Malcolm Lamond

THE RED CHRYSANTHEMUM THAT DOES NOT BURN.

It grows 2½ feet high and is perfectly self-supporting; beautiful foliage, a splendid keeper and never shows a dull reverse color. Received the Chrysanthemum Society's Certificate and was awarded 91 points by the Philadelphia committee.

Price 35c each; \$3.50 per doz.; \$25.00 per 100.

...ESTABLISHED 1859....

We would call your attention to the following letter :

KEAP STREET GREENHOUSES,

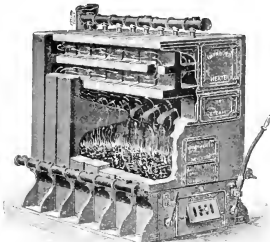

Brooklyn, New York, March 23, 1901.

Messrs. Thos. W. Weathered's Sons,
Nos. 46 and 48 Marion Street, New York City

Gentlemen: I purchased from you last September one of your Sectional Hot Water Boilers for my Greenhouse at Flatbush, and was so well pleased with the results that I bought another one for my Keap Street Greenhouse, taking out another make.

Anything I might say would not be too high praise for your boilers. It works perfectly and I am pleased to say that so far I have saved in coal one half the cost of the boiler. They will therefore pay for themselves in another year, a result which I consider remarkable. I will be pleased to reply to anyone desiring the actual proof of above.

Yours very truly Signed, JOHN SCOTT.
P. S.—Kindly book my order for another boiler. I will let you know later when to deliver it.

NEW YORK.

FLOWERS OF OUR STATES.

The discussion anent our national flower is still an open one, some contending for the violet, some for the golden rod. Many states, however, have adopted special flowers for their own, as follows:

California, California poppy; Colorado, columbine; Delaware, peach blossom; Idaho, syringa; Indiana, corn; Iowa, wild rose; Maine, pine cone and tassel; Michigan, apple blossom; Minnesota, cypripedium or moosehorn flower; Montana, bitterroot; Nebraska, golden rod; Nevada, sunflower; New York, rose; North Dakota, golden rod; Oklahoma, mistletoe; Oregon, golden rod; Rhode Island, violet; Utah, sego lily; Vermont, red clover; Washington, rhododendron; Alabama, golden rod; West Virginia, inclines to the rhododendron.

In other states the sentiment appears to be favorable to flowers as follows: Illinois, rose, violet and golden rod, in the order named; Massachusetts, columbine; Ohio, golden rod; Tennessee, golden rod. Michigan adopted the apple blossom by vote of the legislature. New York, in addition to choosing the rose as the state flower, has selected the maple as the state tree.

No final steps have yet been taken for the adoption of a national flower. An effort was made in 1896 by the National Floral Congress, called together by the Governor of North Carolina, to agree upon a flower, but as many states were represented nothing came of it, and it is now suggested that another national convention shall be called. Inasmuch as many nations have floral emblems the United States should have one, but even

if a national convention could agree upon one, it is doubtful whether Congress would find time to consider a memorial which would carry with it neither political advantage nor an appropriation.

YOU WOULD FIND a copy of the Florists' Manual, by Wm. Scott, especially valuable during the next few months. It tells you all about handling bedding plants to the best advantage at the least expense. The book will save you many times its cost during that period.

If you need help and you are a subscriber to the Review you can insert a 35 word want adv. one time in this paper and there will be no charge. Extra insertions at the rate of one cent a word.

WE WISH to call your attention to the value in our Florists' Manual as recognized by many readers. See their letters that have appeared from time to time in the Review.

If you want a position and you are a subscriber to the Review you can have a 35 word want adv. free one week. Extra insertions at the rate of one cent a word.

The Duplex Standard Metal Gutters

A Common Sense Gutter in all its details. Built of the best and strongest material manufactured. The best combination for strength, durability and neatness that wood and iron can complete. No drip from either underside of the gutter or any part of the house. Only 8 inches of shade. No sash bars are butted against the gutter, thus retaining the moisture and causing early decay. No ledges to retain water. No wires to hold the sash bars against the gutter. Only 5 joints in 100 foot length. Only 16 posts in same length. Will last a life-time. Ask your leading architects and they will tell you the same.

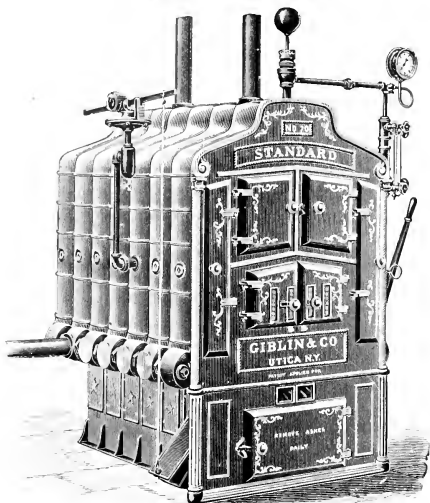

The Standard Ventilating Machinery.

They are made to fill all wants for Greenhouses, Factories, Foundries, etc. In sectional or solid posts, with slow and rapid motion. All fitted in the best workmanship order. No accidents. Always reliable and warranted for 10 years. Will last a life-time. Made mostly of malleable iron.

SEND FOR CATALOGUE OF GUTTERS, VENTILATING MACHINERY,
AND THE BEST MALLEABLE IRON HINGES MADE.

PEACE OF MIND

is not generally included in the cost of the heating apparatus, yet every florist knows how valuable it is to him to have an apparatus that he can arrange

IN THE EVENING

and know it will carry with a certainty the proper temperature until morning. This is

ONE OF THE FEATURES

of our boilers, as is fully

EXPLAINED BY THE

following letter

W. D. SMITH, Newville, Herkimer Co., N. Y., Jan. 2d, 1901, says:—
"I wish to express my thorough satisfaction with the No. 70 Standard sectional steam boiler which I placed in my greenhouses early in December last year. I have three houses, 20x65, located side by side with glass in roofs and gables. The houses are built of glass and wood and contain in all about 5,000 square feet of glass surface. I have in use about 2,000 feet one-inch pipe or about 700 square feet of radiation. I carry a temperature of about 50 degrees at night, but have had no difficulty in getting any higher temperature desired. I find that the boiler will run ten hours without attention. I attend it about nine o'clock at night and it will run with no further attention until seven o'clock in the morning. The draft I have is not a good one, yet notwithstanding this objection, I have no difficulty in getting the fire up and getting as much steam as I desire.

"I can thoroughly recommend the boiler and it will be glad to have you refer to me anyone that wants further information."

Send for our
Greenhouse Catalog.

We can name price delivered at any railroad station in the United States, and special price is given where our boilers are not used.

Trade Conditions.

Trade has kept up very nicely during the season of Lent, although funeral work was the cause of this to a large extent. The demand from the mourners, at times, caused quite a shortage in stock of all kinds.

Prospects are bright for a beautiful stock for Easter. Even though all the Harris and Longhorn will not be in, the supply will be larger than last year and of better quality.

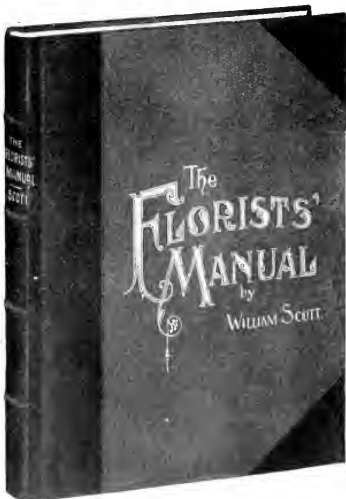

Prices have changed very little during the past two or three weeks, carnations dropping only a trifle. There is a great shortage of good ferns and hardly any sulkax. J. B.

ONE of the New York papers in reporting the rose show last week devoted over half of its report to a description of the costumes worn by the fashionable women in attendance. Evidently the costumes were more interesting than the roses to this reporter.

LOS ANGELES, CAL.—The Park Board has appointed a committee to design a floral float for the parade during the feast of flowers in May.

LIBERTY, Mo.—Paul Stark reports that trade is improving and that calls for funeral flowers have exceeded those of any former years. He will have more glass this year to supply home demand.

ELMIRA, N. Y.

At the monthly meeting of the Elmira Horticultural Society held March 12 there was a fine display of carnations contributed by the Chicago Carnation Co., Joliet, Ill.; Dana R. Herron, Olean, N. Y.; John B. Rudy and E. M. & H. N. Hoffman, this city.

The newly elected president, Prof. J. W. Roberts, delivered a very interesting address. He announced that various valuable special prizes had been contributed to be competed for at the exhibitions of the society and outlined plans for increasing the society's usefulness.

The program included a paper on perennials by Flora Swift, one on sweet peas by Eugene Lewis, and one on the vegetable garden by J. E. Anthony.

Mr. Rudy exhibited a number of fine new geraniums.

FAIR SIZED.

"No," said the retired showman, "I won't say that we had the biggest giant that ever happened, but it is a solemn fact what I am going to tell you. The giant had a penchance, or whatever you call it, for trying new styles of whiskers."

"M-hm."

"Well, when he wanted a new style laid out he had to send for a landscape gardener."—Indianapolis Press.

INDIANAPOLIS, IND.

The regular monthly meeting of the Florists' Association of Indiana will be held in room 300, Denison hotel, April 2, at 8 p. m. Besides the regular business, preliminary work will be taken up regarding the convention of the American Carnation Society, to be held here next February.

GOOD RETURNS.

The Snow Question Again.

I recently published views of wooden gutter and Garland iron gutter houses at the establishment of Wictor Bros., Chicago, taken soon after the big snow storm.

Here are two from photographs taken a little later at the establishment of Peter Reinberg, Chicago.

✿
This view shows how the snow lay in the valley in the wooden gutter houses.

✿
This view shows what was left of the snow in the valley between the Garland Iron Gutter houses at the same time, the two photographs being taken within a few minutes of each other.

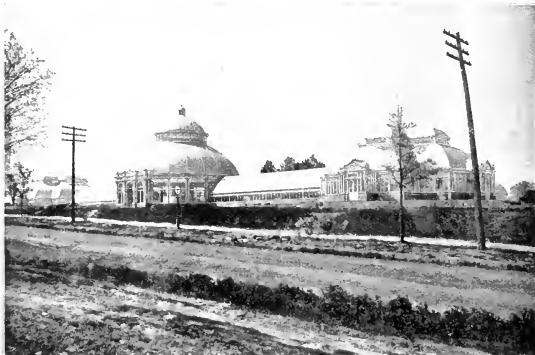

✿
What makes this difference? It is simply because iron is a better conductor of heat than wood. The iron gutters absorb the heat from the inside of the house and this starts the melting of the snow at the gutter instead of at the ridge, and starts it at once. Wood doesn't absorb enough to have any appreciable effect.

THE RETAIL

FLORIST.....

Easter.

Easter comes but once a year; make the best of it. No use to get worried; smiles pay better than scowls. A good, conscientious plantsman to care for your stock is a very valuable personage; get one from your grower if you have none. Whatever you do hide nervous excitement. Stop and think and look over the situation once in a while. A little planning may avoid much trouble. If there is no time to get out to eat see that food is brought in, and on time, too; a hungry stomach usually produces an unpleasant face and the few moments required to obviate all this is time well spent.

A florist's store at Easter should be like a battleship going into action, the deck cleared of all useless stuff. Be sure to have the right people in the right place; have pads and plenty of pencils always handy. Avoid creating an impression on anyone that they are being overcharged, for such is often fatal to business. Remember you are in the business 365 days a year, and that your customers' continuous trade is necessary to keep you up. Therefore, don't try to squeeze all your year into one week. The easy-going customer, or in vulgar parlance, the "sucker," whom many gloat in "soaking," may wake up some day and prove how easy it is to lose a good patron and how foolish it is to imitate the hog.

A good shipping clerk in busy times is worth his weight in substantial appreciation. Boys will be boys and are not men; remember that when loading them up with packages for delivery. Don't be satisfied and feel entirely relieved of responsibility when you see a plant, basket, or box leave your store; make provisions for and assure yourself that it reaches its destination in good condition. A plant delivered in a broken or otherwise dilapidated state is a mute but forcible example of your incompetency or carelessness. Temporary help, who know not plants, are seldom blamable—it is the employer.

Better to have plants delivered on Saturday night than on Easter Sunday afternoon or night. Easter presents delivered after noon on Sunday have lost considerable value from a sentimental point of view. "Far away" deliveries deserve the same consideration as those near by, and the same principle applies to small and large purchases. The dollar customer to-day may be a ten dollar customer to-morrow. Many florists forget this.

A few moments devoted to the tying up of plants, especially azaleas, lilies, etc., when ready for delivery may make it unnecessary for you to replace them or try to appease and explain to two angry people, the purchaser and the recipient. Unless pinched for room, and even then, don't crowd all your stock together. Great masses of color may be very effective to the general eye, but the purchasing eye—the eye you are anxious for—cares not for the massive group; it seeks individual beauty and worth, there-

fore, have your specialties elevated, singled out; make them prominently attractive. Many a good plant remains unpurchased because its beauty is hidden.

First come, first served, may be a good practice in some cases, but not in all. Good customers who are unavoidably late in coming to buy appreciate a reservation of stock you may think will suit them, and invariably the selection it good is satisfactory. It is bad policy to create the impression on any mind that the best stock is sold; there are too many florists these days to justify any one's momentary gulp of satisfaction in pointing to the best stock going to Mrs. So-and-So. If you sell a handsome basket try to duplicate it at once. If you cannot and some of your customers are unreasonably jealous (and many such there are) put the basket or plant out of their range of vision.

Making Stock Attractive.

It is too late now to doubt the wisdom of your purchases. Do the best you can to dispose of your stock at a fair profit. Quality, of course, is at all times most desirable, but inferior goods may often be made to exceed in beauty. In other words, quality of art can always add to the quality of material. A good plant or flower may sell itself, the poor ones need assistance. Almost anything in fair condition has a chance to be sold this Easter; it depends on the manner of presentation. Styles there are to be sure a plenty, you can manufacture some yourself. Made-up baskets of plants will be the leading and most profitable offering in the principal New York stores, and for these mostly anything is suitable. We'll give our own and other people's creations in very brief description, for time is valuable to all just now.

In the first place, people accustomed to growing plants generally prefer to see them in plain, clean pots. The expressed desire to have plants delivered so is yearly increasing among the most sensible; of course the growers don't bother cleaning the pots; you should, though, and often a soft, water-soaked common red brick rubbed on the pots will give them a good brightened up color. Ordinary plant pots and saucers covered with enamel paint in good colors, such as foliage green, white, genista yellow or cherry red have been and will continue to be very popular; they are cheap and add much to the effectiveness of any plant, providing of course the color is appropriate to the flower. White and yellow seldom fight, but the reds and pinks are often troublesome.

The general run of large plants will be put in basket pot covers, and foliage green or white is the best. Often plants such as Crimson Ramblers, etc., which carry all their flowers on top, are made more festive, we mean attractive, by a short bow or two of broad ribbon half way down the plant, but again look out for war in colors. Plenty of ribbons are being used this Easter, but they are be-

ing used more sensibly. They are being combined or over the flowers, but are attached to the stem or branches only to cover defects, or add emphasis to the beauty or color of the flower.

The ribbons are broader than you are of one self color, and the colors are softer and more beautiful than ever. Foliage and satin finished ribbons are the greatest favorites. We have found one brand of ribbon in New York that we think the best of all for florists' fine work. Speaking of ribbons and baskets, they come mighty light; one needs be careful in selection and extent; a large stock of such material is essential in some stores, but many can dispense with them.

The tendency this year is for the larger and better plants. The average lily in a pot is too small; many of them have been put three, six, nine and even twelve in a pot or tub and they sell quickly. The tubs can be painted green, white or yellow, the bands a different color, and often a broad sash of light blue ribbon is preferable to white, tied half way up the stem.

The best and newest things we have seen this season are the gaily colored Porto Rican Carnival hats. So far they have not been used by the florist, but could be made a great feature when filled lightly with flowers and tied with band and hanging bow of bright colored soft ribbon. The hats would be prized as favors even more than a basket, because they are fantastic and novel. They are very large, of many colors, and the edges are rough and unfinished, giving them a very odd appearance. These hats are destined to form a principal feature at many affairs during the summer.

The Porto Rican matting we made mention of in previous notes is used instead of crepe paper in the leading stores. It is more expensive, of course, but is richer and more artistic. Very fine effects can be obtained by ruffling or unweaving the edges from four to six inches. It does not become soggy from a little water and does not crumple up in a woebegone manner like paper does. We are using it with contrasting ribbons of which the following are a few:

Color Combinations.

The matting is arranged to hide bareness of stem as well as to cover pot. Suppose you trim a lilac, white or green mat; tie round with broad bow of white or lavender ribbon; if white lilac, blue or light pink ribbon is best. With deep pink azaleas use white mat and white ribbon; the same on light pink unless you can match the flower with ribbon, then use green mat. With white azalea use white mat with pink or blue ribbon. A soft yellow will go well with bougainvillea, dark green around the violet, primroses, genistas, acacias and ericas, with same colored ribbon or one to match flower. Scotch plaid effects can be got for the ericas, but there's a little jealousy left among the clans and these ericas are not Scotch anyhow. That flat of roses or bulbs would look better if the box were painted green. No time to do it now, so we put green mat around—just enough to hide box and soil, and tie with bright harmonizing color ribbon. Where the flowers are light it is safer to use a darker ribbon; where the flowers are dark, a lighter ribbon.

The half open hamper basket is a winner this time; with zinc lining it is fine,

but needn't bother with any more; line inside of basket with good paper, fill in with gray moss, pack an assortment of small green and flowering plants that will just peep over the rim and sides when planted in soil etc. We tie a broad ribbon around the body of the hamper and arrange a couple of small Eadleys to hang with over this ribbon. The effect is fine with yellow, white, pink or any soft color. Be careful of the flowering plant you put near

Referring to the pictures, Mr. Rudy writes: "The plants were benched June 10, somewhat later than in former seasons. They were planted about ten inches apart each way, in well rotted soil. The house is an iron frame one, running east and west, and there are roses and other stock in the same house. We never shade the chrysanthemums, and aim to give them the benefit of all the sun at all times in the growing as well as the flowering season."

them started to grow when planted out. I plant them in three different places in the garden to make sure I get them in one place if not another.

I plant in a row running east and west on the north side of a row of canes or some tall growing plants. I find this gives them enough shade in the hottest part of the day. I have planted a bed for the last few years alongside of a row of locust trees running north and south, on the west side, but each time they have become diseased. The soil is very sandy, so I find it necessary to give them a heavy mulching. I find that half rotted leaves are good for this purpose, as they retain the moisture in the soil for a long time and violets like the earth cool and moist; this I find a most important thing to get good strong plants.

I believe in keeping the runners pulled off, and if the plants spread too much and make too many crowns to pinch them off, as I get better results from plants with one or two crowns than with four or five. I may not get as many blooms but I get larger and stiffer stems. If there should come a long dry spell or weather I give them a good watering, enough to saturate the earth around them. I have grown them in the house and frames all summer, but this I do not approve of. I find that in growing them out in the summer I can make the beds rich enough inside to run the plants over winter without applying any manure, which I find is the best, as I believe a great deal of harm is done by

No. 1. Photographed July 17.

the ribbon; it may be azalea, carnation, small rose or bulb, but must be choice. We arranged some hampers last Christmas and they were considered by experts the best things in the city; there is a general adoption of them this Easter and they bring big prices. Use all the variety you can and fill in with small ferns; need not take anything out of pots unless basket is very small; keep roots and moss damp.

You florists out west have concentrated too much attention on cut flowers. Plants deserve attention. Here we have a large variety of good, well grown stock to select from and the results are what you too should know. Low baskets of primroses, pansies, violets, forget-me-nots, bulbs, etc., sell well. Needn't bother about fancy baskets; we prefer the butcher and grocery baskets seen at the markets, only they should be painted green; this can be done if attended to in time.

Don't crowd your best stock in the window; put a few made-up plants or baskets in it, and have the good things right under the people's nose. Good luck to all. IVYRA.

A CHRYSANTHEMUM STORY.

We present herewith a series of five engravings from photographs kindly sent us by Mr. John B. Rudy, gardener to Hon. J. S. Fassett, Elmira, N. Y., showing the progress of a bench of chrysanthemums during the past season. It is certainly an interesting record, especially in view of the fact that from this bench Mr. Rudy cut splendid blooms with 6-foot stems with which at the last fall show in his city he captured seven first premiums out of seven entries against keen competition.

No. 2. Photographed July 15.

A Chrysanthemum Story.

VIOLETS.

BY JOSEPH TRAVILLA

(Read before the Tarrytown Horticultural Society, March 28.)

The way I grow violets: I take cuttings in February or first week in March from plants grown in a cold frame, with just enough protection from the cold to keep them alive; in so doing I get stronger plants. I start the cuttings in half sand and half leaf mold and find they root quicker and make more roots than when grown in all sand. They are left in the violet house until planted out; by that time they have good, long roots, and there is no trouble to get

using artificial manures in the winter.

I use the soil I take out of the rose house. I make it about six inches deep, spread a good coat of rotted cow manure on top, then spread over this a good coat of air-slaked lime and mix the whole well together. When I have not enough of this I take two-thirds good garden soil to one-third of leaf mold, with the same treatment of manure and lime as above. I have used new soil the same as for roses, but I cannot get as good results from it.

I plant inside in September and like them to get a good hold of the fresh soil before the growing season closes, but

No. 3. Photographed August 19.

am careful to keep the house open as long as possible and allow them to have the first few light frosts, as it stiffens them and makes them hardy. I do not turn on the heat until I am forced to. I try to keep it about 42 degrees, with the ventilators a little open. I would rather have it at the freezing point than 50 degrees. I keep them well watered and syringe them on bright mornings, but never in the evening.

I find it very beneficial to keep the surface of the soil stirred between the plants; this I do with an old chisel. I give them two or three sprinklings of air-slaked lime and work it in with the chisel and hands; this keeps the earth sweet and there is nothing so detrimental to violets as the earth becoming sour.

There are two varieties of insects which damage the plants if not kept in check. One is a small green worm or caterpillar, which lodges on the under side of the leaves and eats them full of holes. I use slug-shot for these put on with a small blower. Then there is

No. 4. Photographed October 16.

No. 5. Photographed November 11.

A Chrysanthemum Story.

the larva of a gallfly. This gets on the young leaves as they come up from the crown and causes them to curl and rot

off. I use Ivory soap for these; one small cake dissolved in five gallons of water and put on either with the sy-

ringe or watering pot. This also keeps clean red spider.

The red worm is very destructive, and I used to be troubled with it until I used plenty of lime. I believe it is like the lime, and there seem to be a reason of using too much. There are three forms of disease. One is common, called the "Spot," which causes the most trouble. This, in my opinion, comes from too much dampness on the foliage coupled with a warm, muggy atmosphere. I have had the spot for the last three years, and each time have succeeded in getting clean of it by simply placing the plants in the frame and greenhouse and placing the sash over them to keep the drip off them and keep a lively circulation of air through them. For those in the frame I drive a row of stakes at each end of the sash, leaving them ten inches above the frame, then nail a strip on top of them and then lay on the sash. For those in the house I can lift up the sash from the bottom,

which I do, thus getting a good circulation of air, and here I would say, never leave them closed one hour that you can have them open. When a few dull days come in winter and the frames have been kept closed I have seen specks of disease come on them.

There is another form of disease which causes a brown rim around the leaf. This I think comes from the roots and may be caused by the soil becoming stagnant and sour, or it may be caused by artificial manure or by the red worm, and I find when once it comes it is very hard to get rid of. I give them a good coating of air-slaked lime, and work it in as deeply as possible without cutting the roots; this helps them somewhat, if not too bad.

Then there is what is commonly called the heart rot. This again is caused by too close an atmosphere, and this is one of the reasons I prefer a medium-sized plant to a large one; the foliage is not dense and it allows the crowns more air and keeps them dry. I have been more troubled with this last-named disease, if it may be called a disease, than with both the others, and I believe this is on

account of so much warm, nobody weather so late in the fall.

If you wish to keep them blooming as long as possible in the spring I find it necessary to shade the glass with lime the last week in February or the first week in March; it keeps them from

sending up their young foliage and for those in the frames about the last week in March I lay the shutters on and tilt the sash from one side. By so doing I can keep good blooms on them from two to three weeks longer.

for some reason or other they grew up taller than was desirable. Those propagated in July and August often make the most useful and those propagated in September make the right plants for pans, in which shape now we find most of our customers prefer them. You must, however, get the old canes up and started or they will be starting themselves beneath the bench.

WILLIAM SCOTT.

MISCELLANEOUS SEASONABLE HINTS.

Geraniums.

After the eventful days of this week there is still a great deal of important work to do, particularly with those who have been growing a lot of Easter stuff to be succeeded with bedding plants.

Our most important item is to get all the zonal geraniums shifted from a 3-inch to a 4-inch pot. We have to give them this size for our patrons want a good plant in flower. Don't ever put zonals into a rich, light soil or they will grow leafy and soft with a poor flower. Use heavy loam with a fifth or sixth of old rotten manure and see that they are potted firmly. I have many times urged this point but it is an important one. Firmness of the soil produces a stout, hard growth with a tendency to flower and that is what you want. You feel tempted to shade every house in the bright suns of April and May but we manage to get along till the end of May without any shading over the geraniums.

I have also often commented on the great benefit of plunging material between the pots. I cannot wholly account for the great benefit it is to all plants in pots on a bench in hot bright weather, for it is not any manorial quality that the plants receive. It is doubtless the uniform moisture that the roots enjoy, or rather the ill effects of the severe drying out which they escape, and that teaches us quite a little. Of all the material for this purpose nothing equals for cleanliness, easy handling or good results, the refuse hops. Even if your plunging reaches but half way up the pot it is of the greatest benefit. Now, this plunging of plants costs some labor but really scarcely a fraction of a cent on each plant, and it is well repaid in the size and vigor of the plant. This plan does not apply to geraniums alone but to all plants that should receive the full sun till bedding out time.

Hot-beds.

We still believe in the old-fashioned hot-beds and five or six weeks in a mild one will finish off many plants that no greenhouse can do. You do not want a great deep affair, such as the growers of lettuce and cucumbers make in March; eighteen inches of stable manure is enough with five or six inches of soil or sand for plunging material is all you want. Now, there are some plants that are not at all benefited by a hot-bed, or rather would make a rank growth which would unfit them for bedding. Among them the flowering geraniums, salvias, petunias, centaurea, nasturtiums, in fact anything that grows freely inside. But there are several of our bedding plants

that don't grow freely inside and the hot-bed makes them jump. The alternantheras, lemon verbenas, variegated and scented geraniums, verbenas, small pots of mignonette, and a little later coleus and achyranthes and acalypha will do finely. There is a decided advantage in having the bedding coleus in a hot-bed, because by the middle of May you can lift off the sash on warm days and harden them off, which is an immense advantage when putting plants into the open ground.

Seedlings.

Soon after Easter your seedlings will be ready and by the middle of April the asters, phlox, dianthus and other so-called hardy annuals will do very well in a cold frame.

Begonias.

We usually start tuberous rooted begonias for bedding about now. You do not want large plants of these for the flower gardens; they don't do so well when put out. The best beds of begonias I ever saw were started in a mild hot-bed as late as May the first. They had made little growth when put out on June the first, but grew finely and made the most brilliant bed, not eclipsed even by a geranium. We start them in flats of sandy soil on a warm bench and about May the first pot them into 4-inch pots, and then into a hot-bed in the full sun and ventilate on all possible occasions. To take a tuberous rooted begonia out of a shaded house and expect it to do well out of doors in the broad sun and wind is not reasonable, but if grown right they do make a fine bed.

Poinsettias.

I believe these were very popular last winter and are now known by many of us as the Christmas flower. Supposing you have, or buy, any old canes, it is time now to start them growing. Don't cut them up into pieces three or four inches long as we used to. It is a slow method and they don't make as good plants. Just shake off all the soil and repot, at the same time cutting back the cane to sound wood. In a good warm house the eyes soon break and when the cuttings are a few inches long take them off just below a joint, but leave one eye of the new growth on the old cane because from that you will get another cutting. You can keep on propagating till next September. Cuttings root easily and surely in sand during the whole summer, but you must keep them soaked and shaded.

The earliest rooted cuttings sometimes make tall plants. Last year, with us,

MILDEW ON ROSES.

What can we do to prevent mildew on roses? We have grown Jacqueminots for the last twenty years. With the first crop we have no mildew, but the tender growth of the second crop is generally badly affected.

MARYLAND.

Mildew on roses under glass is easily kept in check, but it is very difficult, in fact, almost impossible, to keep outdoor grown roses clean in some localities. It is brought on by exposure to cold draughts when the plants are growing rapidly, by too much moisture over night, by sudden and extreme changes of temperature and by various other causes. I know of no way to prevent it other than to avoid these conditions as much as possible. The best remedy is sulphur, and if used in time will do much to keep it from spreading.

M. STAUCH.

SMILAX-ASPARAGUS-CARNATIONS.

What is the proper temperature for smilax, also for Asparagus plumosus and A. Sprengeri?

Which are considered best for carnations—solid beds or benches?

J. G. W.

The pages of the REVIEW have many times contained my opinion of how to grow smilax. It can be grown in a night temperature of 55 degrees, but under these conditions it would not be profitable; 65 degrees at night is the right temperature to grow it profitably. Contrary to what might be expected, smilax grown in a high temperature is not by any means more liable to wilt than that grown in a cool temperature. With good management you should be able to get four crops in a year. To do that you must plant early in July and they should be strong young plants in 3-inch pots. A good heavy soil suits smilax as it does all the family.

Asparagus plumosus will grow very well in 60 degrees and so will Asparagus Sprengeri. Plumosus is always planted out. It does much better in a solid bed; and have no boards or planks between the earth and the bed. Let it be on the solid ground. Asparagus Sprengeri will do on a raised bench. In fact it is a better place than on a solid bed and can be very well grown in 7 or 8-inch pots or hanging baskets. Sprengeri is a great feeder and soon exhausts the soil you start with.

The question about carnations is rather a heavy one and quite a chapter could be written on it. Some growers are very successful with the solid benches. My own opinion from experience is that I would rather have them on raised benches in five inches of soil. When we see the good results that are obtained by the leading growers on benches why should we want anything better?

The Cape Jessamine.

The advantage in getting them in a solid bed would be that you could have the walls of brick and there would be no replenishing as is the case every three or four years with benches. And perhaps another advantage of the solid beds would be that when the hot suns of April and May come they would not need so much watering and as the roots would go deeper they would likely give larger and better flowers. Still for all that from October to April, and that is the time when we get big prices for flowers, they are easier managed and better results can be obtained on the raised benches, and that, I believe, is the best way to grow them.

WILLIAM SCOTT.

THE JESSAMINES.

Among the southern grown flowers which are most widely known for their fragrance, beauty and shipping qualities are the Jessamines (*Gardenia florida*).

Of the Cape variety there are two kinds, known as the Capes and Grandifloras. They are very much alike, being pure white with rich, waxy green leaves. The Capes blossom almost all summer, but are much smaller both in buds and foliage than the Grandifloras, and seldom have the long straight stems of the latter. The season for the Grandiflora Jessamine is about the middle of May, and usually lasts three weeks.

Near Alvin, a little place in southern Texas, the Grandifloras were first found, and now they are cultivated in open fields. The shrubs reach a height of from six to eight feet, are evergreen, and during the blossoming season are covered with the pure white blossoms which perfume the air for miles around.

The buds have been shipped as far north as Canada and to every state in the Union.

PENSE COOK.

Alvin, Tex.

PHILADELPHIA.

The Market.

The cut flower market has been active since the last report. Business for this week opened with a rush on Monday, a very large number of floral offerings being sent to the members of new councils, in their chambers at city hall. The gifts were nearly all made-up baskets of various kinds, creating an unusual demand for roses of the poorer grades. So numerous were the orders for this occasion that twelve florists' wagons were counted in front of the public buildings at one time, and the popular members were obliged to hire express wagons to carry their flowers home.

Prices rule about the same as last week, excepting that the second class roses advanced as noted above. The indications are that roses will advance little if any at Easter. Choice Beauties are expected to bring from \$3 to \$6 a dozen; Brides and Maids from \$8 to \$10 a hundred. Carnations will be in good supply, better it is thought than usual at Easter. Ordinary grades are quoted at from \$3 to \$4 a hundred, fancies at from \$5 to \$8 a hundred. Sweet peas, which are becoming more plentiful, will bring from \$1.50 to \$2 a hundred and can now be had in several colors. All greens are in brisk demand, especially asparagus.

Lilies are selling well and will probably be cleaned up, many being late and others poor; the ruling price is 12 cents per bud and flower whether cut or on the plant. Some fears have been felt as to whether azaleas will be in short supply. This seems unlikely, as at the close of last week, Aschmann, Bunting, Dreer and Mecky, all had large stocks on hand. The retailers can generally manage to make other plants go around if the lilies and azaleas hold out.

Various Items.

Most of the large retailers have secured a convenient annex, so to speak, wherein they can store plants sold till the time for delivery arrives or where they can display part of their stock. Some of the growers have taken stores and stands in the heart of the city just for a week. Charles Fox, Broad and Thompson Sts., received his lilies the end of last week, the plants all being in bud with no open flowers. This plan makes the transfer from the greenhouse to the store much less risky than when the flowers are open. Judgment must be used in selecting plants with buds that are far enough advanced to open in time without the aid of sunlight.

W. L. Edwards, of Norwood, Delaware Co., lost many of his carnations by stem rot last fall and was obliged to find a suitable substitute. He planted two houses in pansies, separate colors; the cut flowers have proved a paying crop.

There has been some inquiry for well grown geraniums in 6-inch pots. These should pay at from \$3 to \$4 a dozen. Here is an opening for some one next season.

Thomas Mechan & Sons have two houses of sweet peas that are beginning to bear well. They have Blanche Ferry, Emily Henderson and New Countess.

Hugh Graham as well as George Anderson will have Brunners at Easter.

Jacob Becker has some well grown Souvenir de Wootton in pots.

Friday night saw the close of a pretty Easter opening, held on three evenings last week by Samuel S. Pennock. Five ham, of Logan; Hugh Welch, of Tioga; William K. Harris and Robert Craig & Son, of West Philadelphia; and Robert Scott & Son, of Sharon Hill. Each grower exhibited sample lilies, azaleas, hydrangea, genistas, spiraea and other plants in bloom on tables from which orders were taken. There were also exhibits of choice Beauties, Lawsons and other cut flowers to show that Mr. Pennock's consignors will keep up the high standard of quality at the coming great plant festival. The whole place, including the cold storage rooms, showed to advantage, being brightly lighted and full of people. The affair was successful from a business standpoint.

Charles Zimmer has been making a reputation as a grower of Princess of Wales violets this season. Color, stem and foliage are praised by critical buyers.

A Philadelphian who was at the "Hyphen" rose show says that all the growers took off their hats to Stephen Mortenson when they saw his vase of Liberty. It was not for competition, but so fine a display that great things were prophesied for this Southampton man in the near future.

Robert A. Stewart has his new store in running order for this month, which he considers the best of the twelve.

The rose growers are trying raffia for all types of both stakes and plants. It is cheaper than string, but whether it is as quick and effective is a question.

A contemporary announces that William Munro has succeeded W. A. Leonard as foreman at R. Scott & Son's, the retiring foreman having rented a place on his own account.

The club meeting has been postponed until Tuesday in Easter week. John N. May will speak on the rose meet at the "Hyphen."

PHIL.

BUFFALO.

We have been blessed with a hot time, bright days, which have been especially welcome to those lily buds who were backward. Although having very sharp frosts every night we are gradually tapering off, with every sign that a few days more will bring the weather we so much desire for Easter. The Main street stores are making a very gay appearance. Palmer is always up to date. Last week his window was especially attractive. He had the now famous Beck design, which as every one knows is North and South America, and on it a huge buffalo. The ground work was galaxy leaves, and the two continents were faithfully worked out in white and pink carnations, and it was all surmounted by a well designed buffalo standing on a globe. Although this is not so much art as it is fine mechanical work it attracted throngs of the passers-by.

As I said in my last letter, there is every probability of a lively Easter for the florists, and from the present outlook I scarcely think there will be enough good stuff to go round. Mr. Henry Wise,

But with all this these are not to be the chief source of accommodation for visitors. It would be within bounds to say that there are thousands of homes in Buffalo, good substantial residences, and their owners are anxious and willing to make a little money this summer by renting out rooms to visitors. This season alone will accommodate, I believe, fifty thousand people. The rates of these private houses are already known to be from one to two dollars for a person. This includes a breakfast and other meals if required, but usually an exposition cities a breakfast is all that is expected as there are plenty of restaurants and other places to obtain meals besides going home to the boarding house. Whatever apprehensions there were a few months ago of Buffalo not accommodating its many thousands of visitors are, I believe, entirely dispelled, for from all sides we are having applications from people who are anxious to rent their rooms, and I wish particularly to say that these are not a poor class of houses but good, substantial buildings, and what is better than

and the other rows, bulbs one year from small bulletts. We have an irrigating plant here, capable of taking care of all our fields, and we never allow our stock to show the want of water, for during droughts we have men who spray the fields at night with a 2-inch hose. The following day, after the top moisture is dried out, cultivators are put through every row of gladioli, so as to retain the moisture underneath.

While on the subject of large bulbs, let me say that while a large gladioli bulb is admittedly the best for blooming purposes, it does not follow that in selecting from a mixture one should take all large bulbs, for it has been clearly demonstrated that there are very many fine varieties grown which, although given extra care and cultivation, respond to such treatment not in the increased size of bulb, but rather in producing two or more blooming bulbs, or many cornels, frequently both. Such varieties as these are of course eliminated by selecting only the largest, and it is no wonder that the average retail buyer complains of quality when he insists upon having nothing but large bulbs, and does not leave the selection to one who knows the character and habit of most, if not every variety, he offers. What is most desirable is a clean, healthy, well shaped fat bulb. These facts are being realized more every year, and are acknowledged by those seeking quality rather than quantity and low price.

ARTHUR COWEE.

Large Gladiolus Bulbs.

"the wise man of the East—Aurora," gave us a call this week. Mr. Wise has been very successful this winter with the Imperial violet. I have not heard much about this, strange to say, and yet it is much larger, quite as fragrant, and has finer foliage than the Marie Louise. If it does as well generally as it has with Mr. Wise it will certainly soon displace the old favorite.

Mr. Harlan P. Kelsey was also here. Every one ought to know this bright nurseryman, who was the author of the galaxy. We are too busy this week to write much gossip but there is one important subject that I want my readers to take particular notice of.

Buffalo Hotels.

We have heard from reliable sources that there is a rumor going round the country that the hotels and restaurants of our city are going to charge exorbitant prices during the Pan-American season. The best hotels will possibly put up their prices a little above their usual figures, but it will be a very small percentage of the great army of visitors to the Exposition who will depend on going to these hotels. Buffalo, for the last five or six years has built a great many very fine apartment houses; in fact in that line the city has been overdone. All these are now converted into hotels. There are, besides that, a great many temporary structures being put up specially for the accommodation of visitors, several of them of immense size.

that, all in the beautiful residence portion of our city.

There are already several agencies that can be applied to and rooms engaged months ahead. But Mr. W. A. Adams, of 479 Main street, is chairman of the florists' hotel committee, and he has promised, and I know will send a communication to all the trade journals announcing the fact that he is ready to receive applications from all or anyone who wishes to engage rooms. W. S.

GLADIOLUS BULBS.

The engravings are from photographs of gladiolus bulbs and bulletts grown at Meadowvale Farm. The largest bulb—shown in the cut with the rule, is, I believe, the largest yet brought to the attention of the public, measuring after two months' curing a triple over four inches in diameter. It is of the Lenoine strain, and one might suppose from its size that it received extra cultivation, which I assure you is not so, for it was grown in a large field, six acres, with other varieties, and was not noticed until digging time, when the foreman's attention was called to its unusual size.

While having this bulb photographed I had some others taken to more especially show the healthy condition of stock grown in our soil. The varieties photographed comprise Groff hybrids, Lenoine and Gandavensis. The bottom row contains corns of Lenoine. The next row, bulletts, one year from corns,

ST. LOUIS.

The Market.

Easter stock has been helped along by several fine, clear days, although the weather has been cold and windy the past week. Shipping trade was brisk all of last week; prices have held up quite well and stock has been somewhat scarce. No doubt many of the growers are holding back their stock so as to obtain better prices. First-class stock has not been over plentiful during the week and the wholesale market shows a few changes over the past week. Carnations are not coming in quite so plentiful as they were. Roses of good quality keep at regular prices except in large lots. Meteoros are seen in fine condition with rather short stems; Brides and Maids are short in supply just now; the demand for Beauties has been fine with not enough to go around. Easter prices will no doubt bring them up to \$6 and \$8 per dozen; other roses will run from \$4 to \$10 per 100.

In carnations there are very fine flowers: Daybreak and all whites lead in demand. None are sold under \$2, from that up to \$3, extra fancy bring \$4.

Bull Staff is not so much overstocked as it was; Dutch lyciums are scarce, though no doubt lots of them will be seen in pots this year for Easter plants. Romans are selling well at \$2, so is valley at \$4; daffodils are rather stagnant and trumped major is a drug; callas do not sell well; Harrisii and longiorum are steady. It is the opinion of the wholesalers that while Easter sales will be large the prices will not advance much. Smilax seems scarce just now and asparagus sells well at 50 cents per string.

Various Notes.

The floral cuehre was a grand success

last Thursday night and the large crowd that was present seemed to enjoy itself very much. All the prizes were plants and cut flowers. Much credit is due Fred C. Weber, John Young, F. M. Ellis, F. H. Weber and Will Adels for the way in which they handled the affair. The arrangement committee are thankful to all the local florists who donated plants; Walter W. Coles, of Kokomo, Ind., is especially thanked for the fine lot of American Beauties and Kaiserins he sent; they were among the best prizes. After the playing and distribution of prizes the young folks danced until early in the morning.

Our visitor last week was the genial Walter Mott, who represents Henry Dreer, of Philadelphia. Walter has a great many friends in St. Louis who are always glad to see him.

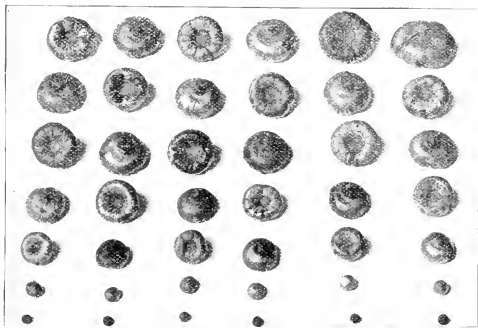

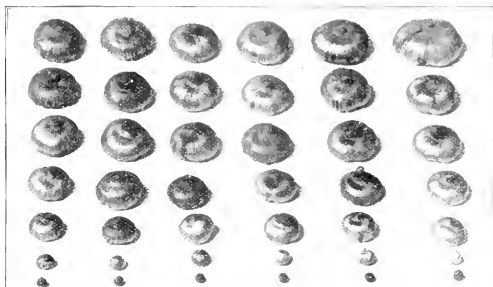

I noticed in the last issue of the Review the article headed "Looking" from Bro. Scott, P. N. F. B. L. I think the plan a good one and heartily indorse it, and hope the other "cranks at large" will do the same. St. Louis has the three men that can beat any three florists that will be at the convention in Buffalo this summer. J. J. B.

a big lot of them, but there will be a few enough first-class ones to go around and no one seems to be ready to take the poor ones.

The supply is certainly not what it ought to be, but we imagine there will

Washburn will remain there for the winter, her health improving rapidly in such a favorable climate.

Mr. O. P. Bassett is now on his vacation at West Baden, Ind. Mr. J. McKellar & Winterson are doing a

Gladiolus Bulbs Raised at Meadowvale Farm.

CHICAGO.

The Market.

The weather averages very unfavorable and indications of a shortage for the Easter trade are becoming stronger. All the wholesalers report large advance orders and the shortage may extend to every line, except possibly daffodils and violets. Carnations are already very scarce, especially white. A feature noticed in many advance orders is an increase in the call for white over previous years. In roses Brides are in largest demand, though Ardis usually lead at the season. Good Beauties are much short of the demand. Prices of good roses and carnations are stiffening some over the quotations previously published. Good bulbous flowers will evidently be none too plentiful, though there may be an oversupply of that which has been held too long. Already overripe tulips are making their appearance. As none of these can be shipped the fakers will be about the only outlet.

When the lilies are all in there will be

be a lot of stock marketed and that the average results will be better than seems possible at this writing. Let us hope so.

On Wednesday we were favored with some really bright weather, and if this continues the supply may be materially enlarged, though it comes rather late to have as much effect as is to be desired.

Various Items.

A regular meeting of the Florists' Club will be held at 40 Randolph street tomorrow (Friday) evening. The program includes a paper by Mr. D. F. Hawkes on "Hardy Herbaceous Plants."

Mr. Frank Garland, the well known grower of Des Plaines, has opened a city wholesale place at 55 and 57 Wabash Ave. in the store formerly occupied by A. H. Poehlmann. C. S. Stewart is in charge.

Mr. C. L. Washburn has returned from South Carolina. He reports that the peach trees and the trailing arbutus were in bloom when he left and that the native rhododendrons were in bud. Mrs.

business in Easter plants as well as cut flowers and supplies. They are fortunate in having a larger supply of lilies than usual.

Callas from California are again in the market. It was merely an experimental shipment. These came through in better shape than the big shipment made some years ago. If they can be sent through in quantity as well and the freight don't eat them up California callas may yet be a factor in the market at Easter.

Mr. E. Winterson entertained a party of about twenty florist friends at his home last Sunday evening and it seems needless to add that Walter Kreitling was the star of the evening.

Mr. F. J. King, Ottawa, Ill., was a recent visitor.

TARRYTOWN, N. Y.

The Tarrytown Horticultural Society held its regular monthly meeting March 28 with President Smith in the chair and about thirty members present. The executive committee reported the list of essays for the year complete, and that the annual flower show of the society will be held Nov. 3, 6 and 7. Mr. L. A. Martin resigned as corresponding secretary. His future address will be Greenwich, Conn. On motion a vote of thanks of the society was tendered him for his able services as corresponding secretary. Henry Bradley was elected to membership. Alex. McClelland, Alfred C. Cooke and Mr. Crossman were proposed.

A hundred Marie Louise violets exhibited by Mr. Joseph Bradley were awarded a certificate of merit; Mr. Claude Wilson and Mr. Able Weeks, judges. H. J. Rayner was duly elected as corresponding secretary. Mr. Joseph Bradley read a very able essay on the cultivation of violets, in the discussion that followed Messrs. Cockburn, Scott, Farlow and Mooney taking part.

H. J. RAYNER,
Corresponding Secretary.

When you want to buy any stock our classified advs. will save you time and money.

BOSTON.

Trade Conditions.

Probably business is tully at good as usual at this time of year or even better. A large amount of goods is being moved, prices ranging from very low to very fair. If anything is overplentiful it must be lilies, double violets and roses. Other material in fair supply, except good carnations, and those are not so scarce as they have been. An exception must be made of red roses, since they are much more plentiful and surely the demand seems smaller. Some large stores that have carried a stock of Beauties all winter do not now dare to purchase them on speculation, but perhaps carry a small stock of Brunners instead.

Various Items.

George Sutherland demands the right to label his 34 Hawley street establishment the most complete wholesale place in New England. He keeps everything compactly on one floor and has expanded laterally some four or five hundred square feet in two rooms; one for a wire worker and one for the manufacture of the Koral letter. This letter is working up a fine reputation, and he is now working the same idea into different designs. His new addition of territory also gives him a fine rear entrance to his store and a spacious private office.

Phil Feinstein has always been classified as a street faker, although he has had headquarters in an old street car on Portland street for the past few years, where he has actually carried on as regular a trade as many others in more pretentious structures. He had his little wooden block fitted with electric lights, cash register, etc., and backed it up against a good large ice chest. He has been a heavy buyer of good material in the city, besides contracting for the whole output of two or three quite large growers. But he has now come out of this chrysalis state and spread his wings in one of the largest rooms devoted to the business in the city. He sub-lets part of it, however, and his personality is amply large enough to fill the rest.

A Royal Visit to King Street.

"Half a league, half a league"—yes, a league and a half onward via Dorchester avenue we found the rose houses managed by Lawrence Cotter. They carry some 40,000 feet of glass, are somewhat of an antiquated pattern, but were built in a most thorough manner, and have been kept in good repair. The rose bushes are first-year plants on their own roots, not very heavy, but looking well and coming in good for spring trade, if there is any. One house is devoted to the Liberty rose, which showed a big lot of fine buds on long stems at the time of my visit, on Mar. 25. Another house shelters the finest lot of potted crimson Ramblers I ever saw, with a few specimens of the pink variety, which looks all right, but is not recommended by Mr. Cotter. But he is enthusiastic over a new climbing red rose bush, of which he has quite a supply. It makes a large plant, and throws a profusion of Brunner-like blossoms. Fine thing.

But we were out for lilies, and found nearly half the houses full of them, to be followed by summer roses.

Probably this is our largest collection of lilies next to that of E. N. Peirce &

Sons. And they are good ones. But do not take my word for this. Go and see them or visit representatives at the New England Cut Flower Co. on Ordway place.

L. H. Foster's place, across the street, was also inspected. He will pardon me while I say it is really not an awfully interesting place to visit, even with the courteous treatment of himself and foreman. But it is a monument to his thrift and energy in that he manages to sell his plants when they get large enough to be really worth looking at. Billions of small palms and trillions of small ferns; the ground is full of them out there! And he has a raft of bedding material coming, too. J. S. MAXTER.

AN EMPLOYEES' ASSOCIATION.

The editor of the REVIEW suggests that I take up the question of an association and call upon employes in regard to forming an organization. Every interested employe will, I am sure, appreciate the editor's generosity in offering to devote a page or so of the REVIEW to the interests of employes.

If it was at all possible I would be willing to do what I could. I would first issue a call to all employes around Chicago who are interested, inviting them to send in their names to the REVIEW (if it would not be asking too much of the REVIEW), said names to be handed over to me. I would then invite them to meet me at a given date and we could then go ahead with the organizing.

But the fact of it is I have been called away from the city and all I can hope to do in the case is to extend the call for names and ask the next most interested one to act in the matter.

W. K.

[If those interested will send in their names we will endeavor to arrange for a meeting for preliminary organization. —Ed.]

SAN FRANCISCO.

The Market.

Our Easter trade promises to be very good this year; the supply of stock will be good, the only scarcity may be in HARRISII. Crimson Ramblers are in good supply and no doubt will sell well.

Prices: Beauties, 81 to 83; Brides, Maids, and Carnots, 20 to 75 cents; Perles, 25 to 50 cents; Cecil Brunners, 123 cents; Kaisersins, Golden Gates, Meteors, 25 to 75 cents. Carnations, Hobart, 81; Crocker, 25 to 50 cents; Schwerin and Bradts, 25 cents; mixed fancy, 25 to 50 cents; Scotts, 20 to 25 cents; Portias, 123 to 20 cents; Hill, 25 to 35 cents; Lawson, 50 cents; Marquis, 30 to 50 cents. HARRISII, 81.50 to \$3.50; tulips, 35 cents; valley, 35 to 50 cents; Japan iris, 50 cents; callas, 81 to 81.50 per 100. Violets, Princess, 75 cents to 81; Marie Louise, 81 per doz. Smilax, 5 cents; asparagus, 10 cents per string. Crimson Ramblers in pots, 3 feet, 50 cents; 4 feet, 75 cents each.

Trade Notes.

Domoto Bros., Fruitvale, lost \$4,000 worth of plants in the wreck of the Rio Janeiro. They were imported from Chota, Japan, and consisted mostly of wisterias, bananos, aspidistras and callielias for Easter. This firm will have a fine lot of longiflorums, 7,000 in number; also 4,000 Spanish irises, yellow and

purple. Four houses 20x200, for roses and carnations, will be built this spring.

A. Farnum, Elmhurst, Alameda Co., will put up one house 25x150, for roses. J. Gilmore, Elmhurst, Alameda Co., will erect one house 16x300, for roses. Mr. Gilmore will try his hand on a batch of two-year old plants. He thinks he can master this beautiful rose, but had better.

H. Yoshike, Willow street, Oakland, has about 10,000 seedling carnations, quite a number are in pots, while box after box can be seen filled with seedlings as thick as grass. Three boxes of seeds from Lawson seed pods were sown this week. Lookout for something good.

E. W. McLellan, Burlingame, will have about 400 dozen lilies for Easter. Fiek & Faber will move to San Mateo. J. N.

THE PAN-AMERICAN.

Floriculture.

The landscape features and adornment of the grounds are of great importance at the Pan-American Exposition. In the Grand Court, in the Court of Fountains, in the Court of Lilies, the Court of Cypress, in front of the Pergolas—in fact, everywhere that flowering plants and ornamental foliage plants can be planted, they will be lavishly used. The colors employed in the flower gardening will harmonize with the coloring of the surrounding buildings. There are over 600 large vases which will be filled with flowering plants and drooping vines, and many of them with specimen palms. Large quantities of palms have been brought from California, as well as oleanders, oranges and ornamental grasses. All these will be planted in the open ground as soon as the weather will permit.

Five hundred standard sweet bytes have been imported from Europe. These have magnificent symmetrical heads and are six and seven feet high, and will be largely used to adorn the exterior of the largest buildings. A most effective feature will be the use of 500 tall, tapering cypress obtained from the south. They are thirty or forty feet high, now in boxes, and will be planted in the Court of Lilies and Court of Cypress. They are in most perfect order and will lend an oriental aspect to this part of the grounds which it would be impossible to obtain with any other material. The idea of using these cypresses was most happy, and their condition now reflects great credit on the ability of the landscape gardener.

The display of aquatic plants is very large. On the south margin of the east and West Mirror Lakes are planted in groups of ten to fifteen in one variety upward of 1,500 of the finest known species and varieties of the hardy nymphæas and nelumbiums. The Court of Fountains in front of the Horticulture Building, to the west of the Esplanade and in front of the Government Building on the east, will contain many of the finest nymphæas as well as other less known aquatic plants. The two grand basins, each 125 feet across and situated a few feet to the south of the Machinery Building and Liberal Arts Building, respectively, have been heated for the special welfare of the Giant Lily of the Amazon, the Victoria Regia, and the exotic nymphæas. The location of

A Good Wheel Hoe.

these are splendid, both for the appearance they will make and their sheltered location. Henry A. Dreer, of Philadelphia, is making at great expense the entire exhibit of aquatic plants.

The space devoted to horticultural exhibits, and covering some twenty acres, contains 200 beds of every size and design. A large part of it is known as the Music Garden, and there is no prettier or more pleasing spot in all the grounds. The absence largely of straight lines and the liberal planting of trees, with its already beautiful lawn, gives this part of the grounds a natural and park-like beauty. The demand for space in this garden for exhibits by the leading nurserymen and florists of the country has far exceeded the space available, but nearly all well-known firms are represented. Every familiar flower as well as the new and choice introductions will here be seen, and from groups of our native trees, evergreens and mountain plants to the humble but admired pansy.

All these beds, as well as those in the landscape department and in the courts and surrounding the buildings, are now filled with hyacinths, tulips and narcissus and other spring flowering bulbs, which insures a brilliant display during the month of May, to be followed later by the permanent summer blooming plants. In August last there were planted on the margins of the shrubbery borders 200,000 hardy perennials which will flower during the summer, giving not only color but naturalness to these borders. To those seeing the grounds

now with the great diversity of levels, its sloping banks and terraces, its wooded mounds and leafy glades, its canals and lakes and lagoons, it seems almost incredible that less than one year ago today it was a flat plain with scarcely a rise of two feet in its mile of length and breadth.

The spacious and magnificent Horticulture Building will be devoted entirely to fruit. Every inch is already assigned to the several states. The two large conservatories leading from this building to the Graphic Arts Building on one side and to the Mines Building on the other, will be constantly gay with flowering and fine foliage plants. Beginning with the opening week in May and continuing throughout the summer will be held special flower shows of all the most popular flowers, for which medals and diplomas will be offered. The prominent specialists of the state are taking the liveliest interest in these exhibitions and will all exhibit. Particularly is this so in the case of carnations, roses, peonies, sweet peas, gladioli, asters and chrysanthemums.

It is impossible to give in a few hundred words more than the merest outline of the work and beauty of horticulture at the Pan-American Exposition. It is not in one spot or one exhibit that the visitors will be charmed, but in the beauty and completeness of the whole.

WILLIAM SCOTT,

Assistant Supt. of Horticulture in charge of Floriculture.

A GOOD WHEEL HOE.

We present herewith an engraving of a wheel hoe of a very simple but efficient pattern that proves satisfactory to Mr. W. E. Hall, the Hort. of C. G. S. Ohio that he is offering it to the trade and others. He says it beats any other tool he has ever had. Its simplicity is certainly in its favor, and it would seem to be just the thing for cultivating gardens in the field.

NITRATE OF SODA vs. SULPHATE OF AMMONIA.

Of the several fertilizers that are used in the production of garden and farm crops none are better known than the two important sources of nitrogen—nitrate of soda and sulphate of ammonia—and judiciously applied none are of greater value for several of the principal crops. It may be assumed that with a fuller appreciation of the aid they are in certain cases able to render there will be a material increase in their use, and it is therefore desirable the cultivator should be acquainted with the comparative returns which may be expected from these manures, and with the conditions under which they may be the most profitably employed. Hence the exhaustive paper contributed by Professor Warrington to the current issue of the Royal Agricultural Society's Journal on the comparative value of these two fertilizers is of much interest, and fully deserve the careful consideration of both gardeners and farmers. As the author points out in his opening remarks, sulphate of ammonia and nitrate of soda have long been competitors for the cultivator's favor, and the competition is likely to continue, as the market price of each influences the market price of the other. It is consequently desirable the cultivator should be acquainted with the conditions under which each attains its maximum efficiency, as without this knowledge he is not in a position to employ them to the greatest profit, or to take advantage of the variations in their market prices. As the paper occupies nearly fifty pages, it is not possible to do more than very briefly refer to a few of the conclusions at which Professor Warrington has arrived as the result of his investigations.

Although sulphate of lime and sulphate of ammonia are chemically distinct substances, not one of the proximate constituents of one salt is found in the other. In their use as manures they become, however, far more alike. While the nitrate of soda undergoes but little change in the soil the sulphate of ammonia is profoundly altered. By contact under favorable conditions with a moist soil containing carbonate of lime the sulphate of ammonia is finally resolved into two salts, the sulphate and nitrate of calcium; and the mention of this fact will show that the presence of lime in the soil is essential to its efficiency. According to the results of the investigation made by Professor Warrington, sulphate of ammonia cannot be profitably used as a manure on land destitute of lime, and in its use on soils containing a large percentage of

...DREER'S... Novelties and Specialties

Campanula Isophylla Mayii.

In this new Bell-Flower we have one of the most important and valuable novelties of the season, and a plant that with only ordinary care can be grown by anyone; a plant for everybody. It succeeds best as a pot plant grown in a half shady situation, and may either be permitted to trail over the sides of the pot or staked and grown upright; under either condition it becomes one mass of flowers of a pleasing light blue color, and are produced continuously through the summer. Strong stock plants in 3-inch pots, 60 cents each; \$5.00 per dozen. Good young plants in 2-inch pots, 25 cents each; \$2.50 per dozen.

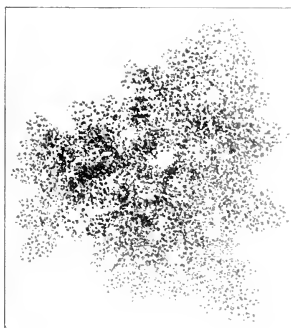

Campanula Isophylla Mayii.

Deutzia Gracilis Rosea (new).

Identical with Gracilis in general habit, but with flowers fully double the size of that graceful variety, to which is added the additional charm of being suffused with a delicate rosy tint, just sufficient to relieve the dead white which is objectionable in the type, and which will undoubtedly place it in the front rank of shrubs for winter forcing. A limited lot of one-year old plants. \$2.00 per dozen, \$15.00 per 100.

Anemone Japonica Queen Charlotte.

The finest of the Anemones and a grand summer and fall cut flower. Strong 2 1/2 inch pots, 75 cents per dozen; \$6.00 per 100.

Frond of Adiantum Charlotte.

New Adiantum Charlotte.

Our illustration gives a faint idea of the beauty and grace of this new Maidenhair; it is entirely distinct from all other varieties, and even more graceful than A. gracillimum, and possessing the advantage of having much stouter, stiffer stems, on account of which it forms more shapely plants, and increases its value for cutting purposes. Specimens of this handsome sort shown at the exhibitions of the Penna. Hort. Society during the past two seasons attracted the attention of all lovers of Ferns. Strong, 4-inch pots, 35 cents each; \$3.50 per dozen.

Montbretia Crocosmiæ-flora Germania.

This new giant Montbretia has been under our observation for the past four years. It grows about 3 1/2 feet high, is of sturdy habit, much branched, and produces most graceful spikes to the greatest profusion. They are well furnished with large six-petaled, widely expanded flowers, measuring over 3 inches across, probably the largest of the genus. The color is a rich glowing scarlet, shading to brilliant orange, with a blood-red throat. The buds and also the reverse of the petals are blood-red, a most striking combination of colors, making a grand effect. 30 cents each; \$2.00 per dozen; \$15.00 per 100.

Montbretia Germania.

Cactus Dahlias, Aezir, Loreley and Strahlen Krone.

Introduced by us last year, are three gems, and no collection is complete without them. Strong roots, 15 cents each; \$1.50 per dozen; \$12.00 per 100.

Twelve Choice Japanese Tree Paeonias.

We can supply twelve of the finest Japanese varieties in strong heavy plants, 50 cents each; \$5.00 per dozen.

Yucca Filamentosa Bicolor.

This elegant plant has proven entirely hardy with us the past winter. We offer good, one-year-old plants, 35 cents each; \$3.50 per dozen.

Our new Quarterly Trade List which has only recently been distributed, offers a complete line of all the leading novelties, together with a full line of seasonable stocks, with full lists, our specialties, as Decorative Plants, Water Lilies and Aquatics, and the most complete list of Hardy Perennials offered in this country. If you have failed to receive a copy advise us.

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA.

OSAGE, IOWA.

The florists of this section (southern Iowa and southern Minnesota) have all had a very prosperous winter and have had no trouble to sell at good prices all the cut flowers they could grow.

We are all very friendly terms and held our fourth semi-annual picnic at Charles City, Ia., Jan. 23 and 25, with Mr. M. H. Wetherbee. There were present at this meeting Symonds and Caldwell from Decorah, Perry from Cresco, Klein from Mason City, Springer from New Hampton, Hall Bros. from Osage, and Kinsman from Austin, Minn. We all had a very pleasant time and gathered much valuable information through an exchange of experiences with different varieties under varying treatment. A committee was appointed to report upon the advisability of forming a Florists' Association, but the committee thought it best to postpone forming an organization until our next meeting, which will be held in August at Austin, Minn., with Mr. A. N. Kinsman. II.

CORRECTION.

In the cut flower quotations in the double page advertisement of Messrs. McKellar & Winterson in our last issue the printer made some errors that caused stock to be quoted in dozens when it should have been in hundreds. The error was undoubtedly apparent to our readers, who are familiar with such quotations, and hardly need be told whether the rate is per dozen or per hundred, but in case there are any who were mystified we will explain that only the American Beauties were to be quoted per dozen and the remainder should have been per 100.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head. Every subscriber is entitled to a free advertisement not exceeding 30 words in any issue desired during the year. If the advertisement exceeds 30 words, send at the rate of one cent for each additional word.

SITUATION WANTED.—By competent grower or Sicut flowers and plants; good decorator and designer. **MANAGER, single.** Address C. G. F., care Florists' Review.

WANTED.—Young man for first-class cut flower trade and general storeman of experience. J. M. Gasser Company, Euclid Avenue, Cleveland, O.

HEATING.

In reply to the inquiry of Mr. J. G. W., in a very short house he could get fair results by running the 4-inch overhead main to the far end of the house, and the returns under the benches to the boiler, which should be placed with its return connection just below the ground level, but I would not advise this on a long house used for commercial purposes.

In order to get the most effective and economical results the boiler should be placed with its flow connection on below the ground line. The cost of a cellar or pit is not a serious matter, even were the ground to be wet, compared with the ultimate economy and the more perfect results thus obtained.

Four-inch water pipes give good results, especially when but little attention can be given to the heating of the houses, but with good management far better results are obtained by a circulation through 2-inch pipes.

HENRY W. GIBBONS,

New York.

WE HAVE received a copy of the report of the Committee on Entomology by Professor F. M. Webster, reprinted from the Ohio Horticultural Report for 1900. It contains much valuable information regarding treatment for insect pests in the nursery and orchard. The report shows that over 150 nurseries were inspected, that 7,270 trees were destroyed, and that 22,033 trees and 28,700 shrubs were treated by the inspectors. Prof. Webster has also issued a reprint from the journal of the Columbus (Ohio) Horticultural Society of his "Notes on the Longicorn Beetles Affecting Growing Nursery Stock," which is illustrated by several engravings.

SOUTH FRAMINGHAM, MASS.—C. J. Power, the well-known florist, died March 24, aged 76 years. He retired from active business several years ago.

VINCENNES, IND.—W. A. Rieman will add several new houses this season.

DENVER, COLO.

Trade Conditions.

Trade has been fairly good to date, and the first effects of Easter are felt. The weather has been un-fitted for the past two weeks and considerable anxiety is felt whether it will continue so. Considerable stock is to be seen around and the weather will have to be good to unload it all. Though not overplentiful, lilies show up in good quantities and of good quality; azaleas just about enough and good. Spiraea shows up rather heavy, but being particularly good should go off without any trouble. There will also be some fine Deutzias, which so far have sold well. A good amount of lilies will also be offered. About the best thing seen is some well grown Ramblers, the Park Floral Company having a good lot of them. The stores all lean to baskets, and no doubt a big trade will be done in plant baskets.

The supply of cut flowers will perhaps not be equal to that of last year. Still there should be enough to go around when one stops to consider the plant trade. By the time you are through selling plants there is very little time left to sell flowers.

News Items.

Miss Simpkins, for many years an able hand at the Park Floral Company's store, is on the sick list and will not be with us this Easter. Her loss will be felt very much, for she was well liked by the customers and was an artistic worker and a hustler.

I was glad to see that the "P. F. N. B. L." (is that right?) has started something new in the way of howling. I think the idea of a three-man tournament a good one, but should not like to see the old six-man team interfered with in any way. Shall be pleased to send in a few suggestions a little later on.

Rocky.

FREMONT, O.—The firm of Horn & Wetzel is to be dissolved, Mr. Wetzel continuing the business.

ST. LOUIS, MICH.—L. B. Longwell's greenhouse was burned March 28; no insurance.

Nephrolepis Wittboldii.

Plant of Nephrolepis Wittboldii.

If you have'nt yet obtained a stock of this grand new commercial fern you will make a mistake if you do not do so at once. A dozen plants now will be the best investment you ever made.

HENRY A. DREER,
of Philadelphia, says it is

“A Most Valuable Decorative Fern.”

All who have bought it recognize it as possessing those qualities that will make it a money maker from the start.

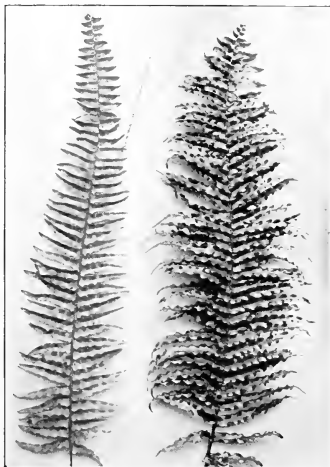

A. J. BALDWIN, Newark, O., says it is
“The Great Fern of the Future.”

J. PAULUS, Chicago, says:
“In reproducing
it equals the Boston Fern.”

Remember we are not sending out weak, puny plants, but Strong, Vigorous Stock that will immediately produce runners if planted out in the bench.

We are offering fine plants, ready for 3 and 4-in. pots,
at \$1.00 each, \$10.00 per doz.,
\$75.00 per 100.

See our offers of PALMS, FERNS, ASPARAGUS, ARAUCARIAS
and FICUS in Classified Advs. in this issue
of the Review.

THE GEO. WITTBOLD CO., 1657 BUCKINGHAM PLACE, CHICAGO.

NOT BAD SOWING.

DEAR EDITOR: I notice that in your issue of March 21 a correspondent signing himself "Phil" has attempted to impress upon my friends and the public that the sowing done by myself or under my management caused a failure of the greenhouse end of the business I sold last year, and suggests that the results will be more satisfactory when the present owners can reap from their own sowing.

"Phil" has no foundation for such an attack upon my place and men. He has been falsely informed or has allowed his imagination to run away with him. The houses that were planted with roses at the time the place was turned over to my successors were in first-class condition and had made good, vigorous growth, producing good flowers until some time in November, when for some reasons that I had nothing to do with they had a very bad setback and many were thrown out. The carnations were in the field and were good, healthy stock. I turned the place over the first of September, 1900.

In defense of my foreman and all others in my employ, I remain, yours,
E. HIPPAED.

[We feel sure that our correspondent meant no reflection upon Mr. Hippard or his employes in the paragraph referred to. However, we give space to the communication.—Ed.]

FRANKLIN, PA.

W. T. Bell & Sons have bought twenty-seven acres of land at Niles Station, on the L. S. & M. S. R. R., five miles from this place, and early in the season will build two carnation houses, each 27x300 feet; the product from which will be sent to their larger place in Franklin, or shipped direct to customers. Water from a fine spring will be piped more than half a mile, and will give a pressure of sixty pounds in the hoses.

A large stock of young carnation plants in excellent condition is now in two-inch pots ready for planting out at the new place as soon as the weather will permit; and a portion of the material for the buildings, including glass, has already been bought. This addition will give them 35,000 square feet of glass to use.

W. T. Bell, the father, has been engaged in business here as a florist for more than thirty-two years; while the sons, John and Philip, were admitted to the partnership three years since.

PIQUA, O.—The Piqua Floral Co. are building a three-quarter span house 12x65 for carnations. They had fair success last season and will endeavor to improve their stock this year. They have opened a seed and cut flower store down town with Mr. F. H. Frisch in charge.

CATSKILL, N. Y.—Henry Hansen reports that trade has been brisk all winter with an excellent call for carnations. Easter promises to be ahead of last year. He has a fine lot of lilies and bulbs stock in prime condition. He will add another house for carnations this season.

ANYONE having Iris Kaempferii would find ready customers by offering it in our advertising column.

KANSAS CITY, MO.

Easter Outlook.

Will the supply of cut flowers be sufficient to meet the Easter trade is an important question asked by all the retailers. After making a tour of the largest growing establishments, the writer can safely say that we were never better prepared for a plant trade than we are this Easter. Probably the best collection, especially in bulbous stock, was seen at the greenhouses of Samuel Murray. He says it will all sell at his Broadway store this week, and with favorable weather his expectations will be fully realized. In one house was seen 1,500 lily plants with scarcely an inferior bud.

Albert Barbe is well supplied with all the leading plants and his roses and carnations are coming in full crop. He is cutting a few blooms of the Liberty rose which are gems and we hope it will be grown here more extensively another year. Trade through the month of March was very satisfactory; many report an increase over the same month a year ago and very little stock wasted.

W. L. Rock is branching out and will soon open a second store, which will be located on that part of Elsworth street familiarly known as "Petitot Lane," the shoppers favorite thoroughfare. The feature of the new place will be a fourteen-foot display window. Mr. Rock will also become a grower and in connection with Mr. Charles Heite, of Merriam, Kan., will form the Rock-Heite Company. Ground has been purchased on Troost avenue, south of the city, within a half mile of beautiful Forest Hill Cemetery and a better location could not be selected. The enterprise will start this spring with 35,000 feet of glass, the houses to be 300 feet long. The firm intends to grow for the wholesale trade, for which we have a promising field. Both are young men of ability. Up to the present time Mr. Heite has made a specialty of growing carnations in which he has been unusually successful and with Mr. Rock's knowledge of the requirements of this market we bespeak the success of the new firm.

Recent visitors were Mr. Wirt, of Parsons, Kan., who reports trade good in the sunflower state, and the strictly business Walter Mott, of Philadelphia.

H. J. M.

THOMPSONVILLE, CONN.—Mr. D. Wm. Brainard has his eighth annual Easter display April 3 to 6 and issued a very neatly printed announcement of same to his customers.

SAN JOSE, CAL.—Over \$6,000 will be expended in making the rose carnival a success, this being in addition to what will be done by individuals. Nineteen deals have been already promised.

March Prices.

Ethel Crocker has been with me all that I claimed for it, but not with some of the growers. If you can get the results I do it will be your best pink and in order to have it tried a second season I offer it free by mail for \$2.50 a 100.

Elm City is a white that has given me excellent results and as it is comparatively unknown I make the same offer with it—free by mail at \$2.50 per 100.

Genevieve Lord. Mrs. Lippincott, White Cloud, Bradt, Olympia, Leslie Paul, Gomez and Maceo at reduced prices for March. Send for them.

ALBERT M. HERR, - LANCASTER, PA.

PLANTS HAVE SOULS.

So Says a Belgian Scientist.

The likes of the field problems a foremost scholar of Belgium have embryonic souls, with rudiments of memory, reason, genius of habits and perception, and clearly in thought sketched outlines of every other essential requisite of soul life. This he has demonstrated in certain painstaking observations and experiments which he transmitted, with frequent intermission in comparison of aptitudes at a recent conference of the Association of the Students of Science. The scholar in question is Professor L. Errera of the University of Brussels, and he regards the physiology of vegetables as a Cinderella among the natural sciences, whose sisters human and animal physiology, back in high places under the homage of scientists, while she, in degrading humility, serves to attend to a little necessary rough work. She is quite unknown in her true character.

With the minutest and most scientific analysis of his subject Professor Errera demonstrates startlingly and precisely how mistaken philosophers, physiologists and even botanists have been in so completely passing over this phase of nearly one half the organic world.

Botanists, he says, have contented themselves with merely a picture of some flowers and some plants, with an herbium and a microscope. Those who study into physiology in the general acceptance of the term deal with a scientific study of the life of beings which move, which think, which react upon stimulants, vividly and briskly. They do not take into account the fact that plants present movements, experience sensations and manifest reactions; that the term physiology is ordinarily applied to everything that has life, saving only plants. Vegetable physiology does not exist except in name.

As for philosophers, they, too, have come short, says Professor Errera, in forgetting that under the denomination vegetable physiology there has been grouped a collection of phenomena of the highest interest. They do not seem to have perceived this because in any attempt to classify knowledge they have assigned vegetable physiology only the most insignificant position.

INDIANS BUILD A RAILROAD.

Out in Wyoming the Burlington railroad is building a line down into the Big Horn Basin country, and the contractors succeeded in interesting a lot of Crow and Sioux Indians from the reservation near by, and engaged a number of them on the grade. At first they were lined up each with a scraper and a team of horses and at the word, with a yell, they started to race, that being the sport dearest to the Indian heart. But after the "boss" got them in line again, and explained that they were there to "move dirt" and not to race horses things went more smoothly, and most of the backs have developed into good workmen.

And so it happens, that within a few miles of the battlefield where Custer and his brave men of the Seventh Cavalry made their last stand in 1876, these warriors, and sons of warriors, many of whom no doubt took part in the massacre, are peacefully taking up the white

man's burden and "make 'em hush sweat."

THE STANDARD Duplex Metal Gutters,

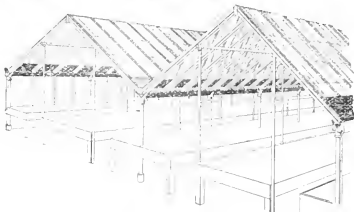

Like our battleships and other valuable inventions, the so pretended all-wise criticized them long before they could prove to the world their efficiency. But such judges have long been relegated to the deep and fathomless sea of ignorance and are still the laughing stock of the better and more intelligent judges.

Just so the Duplex Gutter will get its unjust awards long before it can establish its superior qualities over any other in the same line. I make a gutter for my customer, and when he asks for a steel, wrought iron, cast iron, copper or zinc, he gets just what he asks for, and at reasonable prices for any weight he desires. I will guarantee a more lasting and perfect construction than can be made by using any other kind of a gutter, with no drip at all. I claim nothing that reflects upon my construction in order to injure the merits of any other party's gutter.

Notice the following questions: How long does a cast iron gutter last when erected upon 2-inch gas pipe made of thin steel and subject to the moisture of the cement in the earth (pipe is now most all made of steel), and lasts only four years as claimed by some advertisers. How long will a house last that uses steel wire to hold it together, when its life is claimed only four years? All well informed people will laugh at such contradictory statements. We all know that bridges are not made of cast iron. Why? Because they would fall of their own weight unless a support were given them every four or five feet, therefore steel and iron are used and they last more than four years. Neglected and unpainted, how long do you suppose a piece of 1/4-inch steel or iron will last suspended from the earth in a greenhouse? Have you found any steel wire stakes that were corroded only where they came in contact with the earth, in four years? I have some in use over twelve years and they are as good above the earth as when bought. Now if you used what we also make gutters of, cast iron, copper and if desired zinc (very little higher in price than cast iron) what would their life be? My gutter must be a painful invention.

Send for my catalogue giving plain facts for intelligent persons to study. Yours truly,

E. HIPPARD, YOUNGSTOWN, OHIO.

The Original Garland Valley Gutter and Drip Conductor.

The Gutter is the Foundation of the House.

It has stood a ten-year test and I can warrant that it will last fifty years longer. Will outlast one dozen galvanized or steel gutters, as steel is the poorest material for greenhouse use. No breakage of glass by frost or ice. Only seven inches of shade in December. No drips from condensation when proper humidity is maintained within. No wires to hold bars to gutter; wires are for supporting ridge pole without using ridge pole posts. Simplest and easiest to erect, never sags or gets out of line. Made in my own foundry, of No. 1 Lake Superior cast iron. Do not make a mistake by putting in untested devices, but get into the band wagon with the successful growers who have tested the Garland Iron Gutter and Drip Conductor. The following is a partial list - write them:

HAMMOND'S SLUG SHOT.

1901

Destroys Pests which prey upon Vegetation in the GREENHOUSE, CONSERVATORY or GARDEN.

SLUG SHOT is a composite powder not dependent solely upon any one of its parts for effectiveness. For 21 years **SLUG SHOT** has been used, doing effective work against Leaf Eaters, Juice Suckers, Sow Bugs, Snails or Grubs in the soil. **SLUG SHOT** is spread by duster or blower. Water will carry it through a sprayer or pump. It destroys in this way elm tree beetles, caterpillars on trees. Where Snails or Sow Bugs are troublesome, dust **SLUG SHOT** on the soil with a duster. **SLUG SHOT** rids fowls, calves and dogs of lice and fleas. **SLUG SHOT** is put up in tin perforated screw-top canisters and cartons holding one lb. The 5-lb. package (see cut) retails at 25 or 30c each, larger packages at less rate. **SLUG SHOT** is

Sold by the Seedsmen in all parts of the United States and Canada.

GRAPE DUST for mildews and blights.

SOLUTION OF COPPER against fungus of all sorts.

THE EASTER TRADE.

We print below reports from all sections of the country on the Easter Trade, that most important event of the year to the florist, and are pleased to note that they show the trade has increased to a marked degree this year except in sections where extremely unfavorable weather conditions prevailed. And in many places the business was ahead of previous years in spite of unfavorable weather, which is a truly encouraging indication for the future. On the whole we think the trade has good reason to be more than satisfied with the average results.

TOLEDO, O.—Koenig Bros. report Easter trade as about 20 per cent better than last year, with prices ruling about the same.

MUSCATINE, IA.—Last week being rainy and cloudy with the exception of only two days a poor Easter trade was the result.

PERIN, ILL.—The demand for blooming plants and cut flowers was much greater than the supply and therefore trade was good.

UNIONTOWN, PA.—Barton Bros. report the Easter trade as the best they ever had. The demand soon outran the supply and prices were well maintained.

NEW ALBANY, IND.—Anders Basimussen reports: "Easter trade was excellent. Everything sold out clean and could have sold more. Prices about the same as last year."

ROCKFORD, ILL.—H. W. Bucklee reports Easter trade as very satisfactory and fully 30 per cent in advance of last year. Harrisii lilies were in great demand. Carnations were also favorites.

TRENTON, N. J.—C. Ribsam & Son report Easter trade as the best they ever had. Out-side of lilies the greatest demand was for azaleas and hyacinths. Fern balls sold well.

FREMONT, NEB.—C. H. Gibson reports it was the best Easter he ever had. And in addition to this, funerals, weddings and parties have been numerous and kept trade lively.

AURORA, ILL.—R. Rees & Son say Easter trade was better than last year, with a great demand for pot plants in bloom. Cut flowers were sold out clean at 11 o'clock in the morning.

ATLANTIC CITY, N. J.—Easter trade was satisfactory but sales would have been 25 per cent larger had Saturday been clear instead of a very stormy day. All blooming plants sold well.

ST. JOSEPH, MO.—L. J. Stuppa reports sales probably 25 per cent larger than last year, the increase being in calls for plants. Not much call for beauties. Other roses, carnations, bulb stuff and violets sold well.

LAWRENCE, KANS.—A. Whitecomb & Son say Easter trade was about the same as last year. Bad weather made the supply of cut flowers short. Blooming plants sold well. The call for lilies was greater than could be supplied.

GALESBURG, ILL.—Ge-lely & Deby report Easter trade this year better than ever before and that they cleaned up

in fine shape. All good blooming plant-stock, Easter lilies preferred. They displayed all their stock in their new store on Main street.

ALBIONA, PA.—Easter trade here was excellent, exceeding that of any previous year. Stock was fine and apparently abundant, but the demand was fully equal and in cut flowers rather in excess of it. Today (Monday) there is very little available stock in sight.

MONTGOMERY, ALA.—The Messes Wilson report: Cut flowers were more in demand than ever before, also lilies, ferns, begonias, etc., in pots. Everything sold, even to the pansies and verbenas.

and sold out clean. Weather clean and sunny, making delivery easy.

MOBILE, ALA.—C. Raper & Sons report Easter trade as 25 per cent better than last year. Easter lilies were in special demand, but unfortunately they were not in bloom and had to be shipped in pots, roses and carnations. They could not be heard from the other florists.

OKLAHOMA, IA.—C. Kraus reports the best Easter trade ever known. He had a large supply on hand, including over 200 pot lilies in full bloom, 1800 roses, 2200 carnations, violets in abundance and many other small flowers. At 10 o'clock he was sold out of everything.

NEWPORT, R. I.—James Golin writes that everything was sold out and could not meet the demand. Trade was about 25 per cent larger than last year. Carnations and violets very scarce. Weather very dark. Have not seen the sun for six days. Rain and fog all the week.

GALESNA, ILL.—R. F. Vandervate reports a larger Easter trade than ever before in the plant line as well as in cut flowers. He was entirely cleaned out of cut flowers and everything sold well. He made a large display in a downtown

Easter Plant Arrangements. No. 1.

from the garden, notwithstanding the woods are full of wild flowers.

DAYTON, O.—H. H. Ritter says Easter demand was greatly increased over last year and better prices were obtained. Lilies were in great demand and in good supply; in fact, everything in bulbous

store that was much praised by the local press.

SHARON, PA.—John Murchie reports that he believes all the Sharon florists sold out clean. Volume of trade was about the same as last year. Plants more in demand. Prices a little better.

Supply was abundant but demand except lilies in pots, of a high grade, could have been sold.

DUNQUH, IA. W. W. HALLIDAY reports sales as slightly ahead of last year, with prices about the same. Supply is tight advance on lilies. There are high demands for medium priced flowering plants and less for expensive fancy plants. Stock was plentiful except for a slight shortage in Harrisii and pink roses.

SHARON, PA. M. J. O'Brien reports: Easter trade was fully 20 per cent greater than last year, with better prices. Flowering plants sold well, considering a continued rain all day Saturday. In cut flowers carnations had the call, with not enough to supply the demand. Roses went fairly well at good prices.

KANKAKEE, ILL. Elmer Bros. report Easter trade as much better than last year, with better prices for all kinds of flowers. Calla lilies brought \$2.50 a dozen; Harrisii, \$6.00; American Beau-

LEAVENWORTH, KANS.—R. C. Hinz reports that Easter trade was 50 per cent better than last year, with a lively call for everything. There was plenty of plants with the exception of hyacinths and lilies. There was a shortage in all cut flowers except lilies. A good many lily flowers were shipped in, but no plants.

BIKINGHAM, ALA. C. H. Reed reports: "The Easter trade was never so satisfactory as this year. Should judge there was three times more cut flowers sold than any previous year in the history of this place. The demand for potted plants was beyond the supply. Prices for everything good and every thing sold out."

BRIDGEPORT, CONN.—James Horan & Son reports: "It rained most all the time. A plant trade almost entirely. Plenty of plants left over and plenty of flowers, too, except violets. The nearest Easter Saturday in years. Rich customers bought well. Poorer customers

the florists were sold out by noon Sunday and all are well pleased.

MASSACHUSETTS.—Easter sales were about 25 per cent larger than last year with an increasing demand for flowering plants. Lilies, azaleas and bulbous stock in pots and pans sold especially well. In cut flowers carnations took the lead. Roses, bulbous stock and violets were in good supply and sold well. Prices about the same as last year.

HORNELLVILLE, N. Y. W. A. Wotton reports: "An increase of about twenty per cent over last year. The only shortage was in carnations, which sold for \$1 per dozen; the most we ever received for them in former years was 75 cents. The plant trade was about the same as last year, but the weather was very bad, which no doubt affected that line."

HAMILTON, ONT.—E. G. Brown reports: "Trade here this Easter was the best we ever had. Although lilies were in short supply what there was brought better prices. Roses, carnations and violets sold well; also very good demand for valley, which seems to be getting more in demand each season. In plants lilies took the lead, followed by good white azaleas."

LITTLE ROCK, ARK.—Tipton & Hurst say: "Easter trade was very heavy. We had to cease taking orders and selling at noon Saturday. Could have sold twice as many cut flowers had we had them. Demand heavy for Easter lilies and carnations. Had a large shipment in as well as our own stock. Demand for plants good, especially Easter lilies, which were in short supply."

CLEVELAND, O.—The weather was miserable, a cold rain falling all day Saturday, yet we were pushed, reports J. M. Gasser & Co. Had all we could do. Sold more plants than ever before and could not supply the demand for violets. Roses did not sell so well as on previous Easters; in fact there was quite a falling off in that line. Not much call for valley.

ELMIRA, N. Y.—H. N. Hoffman reports that in spite of a stormy week and steady pouring rain all day Saturday the Easter trade showed a good increase over last year. Any sort of good blooming plant selling at from 50 cents up went readily, especially azaleas, lilies, rhododendrons, dentzas and bulbs in pans. In cut flowers carnations and violets were in most demand. Lilies scarce.

JANESVILLE, WIS. Rent-schley Bros. report Easter trade as 25 per cent better than ever before. They were lucky enough to have 150 Harrisii plants in bloom and sold out clean at an average price of \$1.00 per plant. Next to lilies the call was for azaleas, spiraeas and daisies. In cut flowers violets, carnations and daffodils sold best. In all trade was very satisfactory.

WISCONSIN.—John Wunder reports Easter trade as about 25 per cent larger than last year. There was a good demand for plants and everything in bloom sold well. There was a big demand for lilies and but few to offer. He lost two-thirds of his Harrisii. The call for carnations was larger than for roses, though both sold well. He had to sell dozen at \$1 and carnations at 60 cents a dozen.

Easter Plant Arrangements. No. 2.

ties, \$8.00; Bride, Bride-maid and other roses, \$1.50 to \$2.00; carnations, 50 to 80 cents; violets, \$2.50 per 100.

BAY CITY, MICH.—Boehring Bros. report Easter trade as generally satisfactory, sales of both cut flowers and plants being larger than last year, with somewhat better prices. Lilies were scarce on account of the disease. It was noticeable that the better grades of plants sold quicker than the cheaper ones.

PLETOFSKY, MICH.—S. J. Long reports Easter trade for this vicinity as fully 50 per cent better than any previous year. Everything saleable was ordered by Wednesday. Grand Rapids had to be heavily drawn upon for stock. Violets in pans sold like hot cakes. Pot plants sold equally well with cut flowers.

MEXCIE, IND.—S. Humfeld reports Easter trade as 75 per cent better than last year. Roses short. Greater demand for fancy carnations. Supply of bulbous stock ample. Great demand for pot plants. Some well grown cinerarias in 7-inch pots brought \$1.00 each. Azaleas, lilies and rhododendrons sold well.

didn't get a chance to get out. Not up to last year at all."

MEMPHIS, TENN. Otto Schwill & Co. report an exceptionally good Easter trade, in fact double that of last year, which they credit largely to the improved general business conditions in the south. Their stock was good in quality, especially the lilies, and in addition to their own they had many shipped them from Chicago.

DANVERS, MASS. E. & C. Woodman report weather unfavorable for trade. Lilies in good condition; fine stock plants, 3 to 8 flowers, Japan stock. Neighboring towns and cities we hear sold lilies as low as 15 cents a flower at retail. This competition and the weather caused a falling off in amount of sales as compared with last year.

QUINCY, ILL. C. F. W. Gentemann reports Easter trade as better than ever before. The demand for lilies, roses, carnations and violets was great and all sold at good prices. All blooming plants sold well, especially potted hyacinths, daffodils, azaleas and lily of the valley. All

Easter Plant Arrangements. No. 3.

OGDENSBURG, N. Y.—Mrs. Thos. Lawrence reports: "Easter trade in cut flowers was ten per cent better than last year. The demand was chiefly in lilies, roses, carnations, violets and daffodils. Plant trade was heavy, fully fifty per cent better than last year. Azaleas, hydrangeas, lilies, daffodils and tulips in pots and pans, and Rambler roses, all sold well. Plenty of mud, rain and wind both Saturday and Sunday."

ROCHESTER, N. Y.—F. Schlegel & Sons reports: "Cut flower sales were about the same as last year, but more carnations could have been sold if to be had; there was a shortage of them. In blooming plants there was an increase of 10 per cent over last year, azaleas, lilies, H. P. and Crimson Rambler roses taking the lead. Good rhododendrons also found ready buyers. More small plants could have been disposed of."

HAMILTON, O.—Theo. Beck says that Easter trade was very good. He had a large lot of flowers, but ran short in carnations and somewhat so in roses. Sold clean out of Mirillo, LaReine and Cottage Maid tulips, of which he had a large lot. Had daffodils and Romans to spare. Lilies in pots could have been largely sold, but there were none to be had in quantity. Volume of trade was fully up to last year.

LANSING, MICH.—Robert Mann reports: "Easter trade was very good. All the florists report the best trade they ever had. The call was mostly for pot plants, roses, carnations and lilies; also a good demand for bulb stuff. Trade was fully 25 per cent better than last year. All stock was well cleaned up. The Industrial School had a very elaborate decoration and pretty exercises, which are to be repeated next Sunday."

PITTSFIELD, MASS. John White reports Easter sales equal to those of previous years. Had not the weather conditions been very unfavorable double the quantity of stock could have been sold. In cut flowers, carnations led with roses second. Violets sold well. In plants lilies were in greatest demand, azaleas, second. Apparently, blooming plants are in greater demand each year. Anything that is well grown can be sold.

JACKSON, MICH.—Lee & Co. report that stock was pretty well cleaned up, although on account of rain most of the orders came by telephone. Lilies, roses, etc., were all in good shape and as good in quality as ever seen here. Prices ranged lower than last year. Daffodils, 40 to 75 cents a dozen; roses, \$1.00 to \$1.25; carnations, 50 cents to \$1.00; violets, 25 cents; lilies, 20 cents a flower. All the florists report a good trade. Violets sold exceptionally well.

DAVENPORT, IOWA.—Otto Klingbeil reports a very good Easter trade. Lilies, geraniads, Marguerites, calla lilies, rhododendrons, Azalea mollis, lilacs and lots of other blooming plants sold like hot cakes. Roses and carnations were rather scarce and poor on account of the cloudy weather for the preceding two weeks. Violets, lily of the valley and bulb goods were plentiful and sold at higher prices than last year. Altogether we had a very satisfactory Easter trade and pretty good weather for delivering our plants.

BERLIN, ONT.—A. H. Ewing says: "Easter trade about 50 per cent larger than last year, and more spread over from Thursday to Monday instead of being mostly on the Saturday. Roses plentiful, selling retail at \$1.50 to \$2.50.

Carnations very scarce. Calla lilies sold more readily, and roses second and lily of the valley flowers in place of them. Very many plants and ferns sold well. Plants were not in demand. Violets and valley were of good quality and sold well. Tulips and dalls were a drag and not much wanted."

DULUTH, MINN.—W. W. Seelens reports that notwithstanding that it rained all day on Saturday, he did the largest Easter business in his experience. Trade in plants was double that of a year ago; cut flower trade about equal to last year. He made a fine display, as did other florists, and this no doubt stimulated trade, as the effort was much praised. Duluth people are buying more flowers every year and are requiring more decorations from the florist, where formerly they did their own decorating.

OSKAHOOSA, IA. The Kenble Floral Co. reports: "The business done here this Easter was fully 25 per cent larger than last year, and the demand larger than the supply, owing to dull cloudy weather. The demand for plants was very light, but I attribute that very largely to the weather. It rained almost continually Friday and Saturday before Easter, so that very few people got out and most of the business was done by phone. I find it very hard to sell plants over the phone. People like to see them."

CHAMPAIGN, ILL.—J. E. Yeats reports Easter trade as away ahead of last year, prices ranging about the same. Carnations retained at 75 cents to \$1.00 a dozen, common roses \$1.50 to \$2.00, Beauties \$1.00 each. There seemed to be more call for good carnations than anything else. Lawsons sold at \$1.50 a dozen. Lilies were very scarce. Lots of decorating was done. Mr. Yeats had six churches to decorate. Business is still keeping up well with good prices. We want more sunshine. Can't get enough flowers.

MARION, IND.—Gunnar Teilmann reports Easter trade about the same as last year. Everything in cut flowers was cleaned up and many carnations were shipped in. All went at good prices. Plants went well, too. Hyacinths and daffodils in pots and pans, roses, spiraeas, geraniads, etc. Of lilies there was a pretty good supply, all local grown, and there were a few left over. He had a good crop of Kaiserin roses in and cut nearly 2,000. The weather was unfavorable, cold and cloudy, which hampered trade or there would have been a good increase.

ATHERLY, N. Y.—Geo. Dolbs & Son report: "Easter trade was fully as good as last Easter. Everything in the cut flower line was sold, there being nowhere near enough carnations to supply the demand, as every one was short on them. Roses sold well. There was a nice supply of them, too. Lilies all sold, but there was not a very good supply of them. Plants did not sell quite as good as last year, the weather being the cause of that, as it was a very dull and rainy Easter and several days preceding it. Prices were the same as other years. Taking it altogether trade was good and no one can complain."

PHILA., N. Y., C. F. (Globe), 1890 say their Easter trade was 25 per cent better than ever before. It was good, and not only a plant Easter. The same partly due to the weather, it being bright and wet the week preceding Easter. No novelties were offered, the bulk of the trade being in lilies, lily-of-the-valley, azaleas, hydrangeas, spiraea, geraniums and the usual assortment of bulbous stock in pans, hyacinths, tulips, lily, daffodils, violets in pots. Lilies were fine and plenty. The same of other carnations except the plenty. Violets scarce and poor. Lilies good and abundant, stock of same going in style to bunches.

PHILA., N. Y., E. H. (Globe) reports that Easter trade was probably 10 to 20 per cent larger than last year. The demand for good flowering plants is undoubtedly growing, especially for lilies, hydrangeas, lilies, Crimson Rambler and other good roses in bloom for the most wealthy people, and hyacinths, tulips and daffodils in pots and pans for the less wealthy class. Azaleas, carnations and primroses were less in demand than in former years. In cut flowers the demand was mostly for first-class carnations, Easter lilies, gold tulips, daffodils and violets. Roses were not so largely called for and there were but few calls for valley.

YONKERS, N. Y., Walker & M. (Globe) report: "Easter trade in this city has been fully up to our expectations, being about thirty per cent in advance of last year. The best selling flowers were carnations, violets, roses, lilies, tulips, narcissus, in order named. In plants—lilies, spiraea, tulips, hyacinths, Rambler, azaleas, narcissus, lilies, in order named. This being our first Easter in Yonkers town we are unable to make any comparison with former years, but feel sure that there has been a decided increase in the sale of pot plants, and also feel satisfied that the increase in plant trade is due to our having an unusual number of plants in fine condition at the proper time."

PHILA., N. Y., Easter trade was the heaviest ever experienced. Lilies were short in supply and the demand for cut flowers could not be met. Call lilies, report fair trade. Their hydrangeas were superb and sold well. J. C. Murray reports a very heavy trade on every thing. His fancy tea roses sold at eight to \$2.50 a dozen. Crane and Marquis carnations were extra fine and sold at fancy prices. Lilies were all that one could ask for and sold rapidly at good prices, also spiraea. Loveridge had the finest specimen Easter lilies ever seen in this market; his stock was extra fine. All the stock that could be had was bought and the florists are smiling. The weather was perfect.

LOUISVILLE, KY., H. Lichtfeldt reports: "Easter came in right and cold. On Saturday it rained and it hurt the trade to some extent. But take it all in all it was satisfactory in general. Prices were about the same as last year. Lots of bulbous stuff was sold. Harrisii lilies were scarce and there were not enough to go around. Callas sold well. There was a good demand for sagus and palms and ferns. Roses in pots sold well. In cut flowers the call was for carnations and roses, hyacinths and narcissus. Some very fine azaleas, hydrangeas and geraniums were to be seen in the stores. All the florists report good sales for Easter.

Easter Plant Arrangements. No. 4.

We are having too much cloudy weather here for this time of the year.

LOWELL, MASS., "Patten The Florist" reports: "A whole week of rain, Saturday night the heavens opened and kept open until after closing time on Sunday and as a result our late receipts of roses, carnations and violets, to the extent of thousands, were left in our hands, which wipes out most of the profit. Lilies ran from good to poor mushy stuff which one of our department stores sold for 15 cents per bud and flower. Also a grower who has a store sold his for the same price. Our sales of lilies increased. No call for callas. Good call for roses and carnations but there was a prohibitive price on them; single daffodils, tulips and pansies in bunches sold well. Hydrangeas and azaleas sold well. Take it altogether it was a very unsatisfactory Easter."

COLORADO SPRINGS, COLO., Wm. Clark reports: "The Easter trade in this city started in brisk early in the week, and although it received a check in the way of a heavy snow fall on Thursday, it was resumed on Friday and continued lively until Sunday noon. The increasing popularity of flowering plants was quite evident, and while the lilies went readily, the demand for other varieties was very strong. Azaleas, hyacinths and daffodils followed lilies very closely, but hydrangeas were slow. In the cut flower line, carnations carried off first prize as usual of late, selling in large quantities. This has been practically the first season for fancy fern balls here, but they have introduced themselves in good shape and will take their place on the list for Easter gifts."

SYRACUSE, N. Y., L. E. Marquisse reports: "Sales for Easter greater—some local florists report sales as double last year's—all a satisfactory increase.

Prices about as former years' except on carnations, which were higher, fancy varieties, such as Marquis and Lawson, ranging from \$1.50 to \$2 per doz. Violets were in good demand and every florist ran short. The demand for roses was hardly up to the high water mark of former years. Tulips sold well, both as cut flowers and in pans. Daffodils went slow. Lilies were in usual demand but short crop. Nearly all potted plants sold well, especially roses in bloom. There is from year to year a noticeable increase in the demand for blooming plants. There was about the usual sale on azaleas. As a rule the best stuff in plants and cut flowers sold best. Inferior stuff and the florists who had it both got left."

SPRINGFIELD, MASS., Mark Aitkin reports: "I cannot give you any definite report at this early date as it is rather early for me to have my books straightened up. Our book trade was somewhat heavier than last year, and our cash business about ten per cent greater, although it rested here from Thursday morning until Sunday morning. The greater demand seemed to run to potted plants more this year than ever before, lily plants selling well with azaleas, hydrangeas, violets in pots, Scotch heather, primulas and crimson Ramblers. Rambler plants with us were rather poor, so did not meet with great demand. The principal demand was for azaleas, and violets in pots. There was a very strong demand also for cut violets, we alone selling 4,000 more violets this year than last year. The rain was terrific, making delivery very bad and uncertain, but we consider under the circumstances that we came out of it rather well, not meeting with much loss. There was not very much in the line of novelty for the regular run of trade, but for our fine trade

we had to make up a number of large baskets of plants, which proved to be very effective. On the whole, with the terrific storm, I was more than satisfied with the Easter business for 1901, although one of our large dry goods stores had a cart load of Easter lilies in pots for sale, of which I hear they had a great quantity left over."

EASTER PLANT ARRANGEMENTS.

We present in this issue engravings from photographs of six Easter plant arrangements seen last week at the establishment of Mr. E. Wendeboer, Chicago, that we know will be of general interest.

No. 1 shows a tulip shaped birch bark basket with large bow handle which

to give height and grace, pink and white hyacinths and Primula obconica for color. To cover soil and relieve yellow, a hyacinth, *Lyopodium* is added. The ribbon (No. 16) matches the pink hyacinths in color. Arranged to sell at \$10.00.

No. 5 is filled with a number of delicately colored flowers and no color scheme is attempted. The azalea is a delicate pink, the clematis white, hyacinths light lavender and pink and the narcissus a princeps. Durability is aimed at more or less. Arranged to sell at \$10.00.

No. 6 is a white lily dressed with white matting and finished with Nid green ribbon, which harmonizes well with the delicate green foliage. Very popular. To sell at \$8.00.

Easter Plant Arrangements. No. 5.

is suitably decorated with the long stem of a Crimson Rambler rose. The other roses are Clothilde Souper, which with their fullness give the whole a summer effect. Rose pink ribbon is added to carry out the conventional idea of the basket. It was filled to sell at \$20.00.

No. 2 stands in contrast to No.3 because of its more formal appearance. The azalea is Mme. Van der Crayssen evenly grown and full of flowers and looked well with the olive green matting which is shaped to have the appearance of Mexican pottery. Azalea ribbon was used. Arranged to sell for \$15.00.

No. 3 is distinctively an Easter arrangement because the impression is that of virgin whiteness. The azalea, "Nobe," pure white, is chosen, preferably to others with a solid crown of flowers, because of its gracefulness. The lily matting is also white and the gauze ribbon with which it is tied ends as if were in an egret to grace the beauty of the azalea. Arranged to sell at \$12.00.

No. 4 is a birch bark basket trimmed with moss and pine twigs. It is filled as follows: Small arca and asparag-

CARNATION NOTES.

Easter and After.

In this section the weather has been very bad during the past few weeks, just contrary to what it should have been. Five bright days in March (when we usually have some nice weather) is not very encouraging to the grower who expects the Easter rush to help him make his books balance on the right side. But when we read of the snow storms that visited other sections lately we can only be thankful that we had only clouds to contend with.

Few growers, if any, are likely to cut more blooms than they can dispose of just before Easter, even if the weather is fine, but when it remains cloudy for two weeks and we have lots of orders booked we can hardly be blamed for turning on an extra pipe and forcing up the temperature a few degrees higher. But now that Easter is over you must be careful so as to get them into their regular stride again before any serious damage is done to the plants. You will

also reduce the long run by the time these notes appear, but you must also be very careful of covering. They should be kept just a little on the dry side for a few more days at least, and decided on if it remains

dry. The warm sun and breeze that we will have and a light sprinkling once or twice and during the walks will help them immensely. Putting water onto the roots will not keep them from wilting, so don't do it.

A light sprinkling of hose water into the soil and water in the help render the growth if it remains cloudy but a few bright days will bring the same effect if plenty of air is given. Don't stop firing too soon, wait until the weather is warm enough to keep the ventilators open an inch or two all night, without reducing the temperature below the regular mark. There will be many nights when it is rather warm by fires, but too damp without, and you should run at least one pipe and open the ventilators. With the ventilators open the houses can stand it to be several degrees warmer than when they are shut down tight.

A. F. J. Ryan.

PHILADELPHIA.

The Easter Trade.

The Easter business was fully up to last year's and would have been even better had not rain interfered. The weather was excellent that is the strongest word our editor will allow us to use, especially on Saturday, when all blooming plants exposed on the streets were ruined. The business done in blooming plants was tremendous, probably two-thirds of the whole business done would be a fair estimate. Rather better value was given this year than in the past, and the retailers bought freely in consequence.

There was no scarcity of anything and stock did not appear to be cleaned up entirely either among growers or retailers. Lilies were not in short supply as anticipated; this was probably due to a slight falling off in demand, buyers preferring other varieties of plants. Azaleas were in great demand; the larger sizes sold especially well, unfortunately there were too many. The weather was partly to blame for this and quantities of six-inch azaleas were left. Hydrangeas were in short supply, and only a limited number of really good ones were seen; these sold well, the poor ones went slowly. Spiraea sold exceptionally well in the stores; some of the growers had too many. Crimson Ramblers did not go quite as well as in the past, some being left in the stores, still the sales were good. Rhododendrons, genistas, deutzias, lilacs and daisies all moved well in moderate quantities; valley in pots and pans was popular. Immense quantities of hyacinths, tulips and daffodils in pots and pans were sold. The pans were generally from 8 to 12-inch, all in one color.

Cut flowers sold well, but there were some drawbacks. There was the awful flood of daffodils that swept over us, variously attributed to the South and the violet growers' frames. Be that as it may, daffodils were everywhere at 10 and 12 cents a dozen; one commission man said even then he had 5,000 ready for Easter Monday's business. Another

trouble was with carnations. The second story. The out-of-town shoppers held them on Wednesday and Thursday when they were wanted badly, and sold 84 a 100; then sent them on Friday and Saturday in poor shape so poor that many of them are still in the commission houses or on the dump. If not business, gentlemen. Now, do be good.

To return to the market, Long Beauties were plentiful a little overdone, perhaps, while good shorts were scarce. Prices, \$2 to \$5, a few times, \$6 to \$7.50; 14s brought \$6, 8s, \$10 and \$12; a few selected for shipping, \$15; the poorer grades did not go well, price, \$3 to \$5. Carnations were scarce, \$4 was asked for the stuff, \$6, 8s and even \$10 for fancy. Violets were plentiful; the stores got most of the doublets, the street most of the singles. Smilax and asparagus were in demand, the former at 15 to 20 cents; the latter at 50 cents a string of bunch. Cut lilies sold well at \$12 and valley fairly well at \$3, \$4 and \$5.

Notes.

Pennock Bros. were well satisfied with their Easter business. They noticed a falling off in demand for lilies and an increase in that for large azaleas. They sold quite a number at from \$25 to \$35.

Charles Fox did well. He made up boxes of hyacinths and lilies of the valley which were very popular. These boxes were about 6x8x8 inches, worth from \$3 to \$5 when filled.

Mrs. Edgar, Ridge and Columbia avenues, is well pleased with Easter. She did an exceptionally good business and cleaned up nicely.

Jos. Kitt & Son complain of naught but the weather; they did well. Some large pans of lilies, six or eight bulbs to a pan, came in good shape from Pabst of Collingwood.

George E. Campbell had a good lot of lilies, azaleas, etc., and sold nearly all.

Albert Woltemate's store in town paid, but not like his regular place at Main and Queen streets, Georgetown. This is generally true of the temporary or one-week stands. People get to know and trust their florist.

Samuel S. Pennock did a heavy business. Lilies, smilax, asparagus and carnations were in brisk demand.

Never before were so many plants seen on the street; Saturday's rain made an awful mess of them.

William Berger was well cleaned up except on some bulbous stock.

Few of the retailers slept on either Friday or Saturday nights of last week. Business this week has opened well.

The Georgetown Horticultural Society's meeting held on Easter Monday was well attended. There was a good display of flowering plants by local growers. The feature of the show was Pandanus Sanderi, from Henry A. Drew, which was much admired. Beside it was shown P. Veitchii in good form, from J. W. Young, the points of contrast being clearly brought out. P. Sanderi is a great acquisition and deserved the society's certificate of merit.

Albert Woltemate read a paper on "Lawns and Their Care," and John H. Humphreys one on "Insects." Pitt.

DON'T FAIL to have a copy of the Florist's Manual to guide you during your spring work. It will save you dollars.

BUFFALO.

The Easter Trade.

I am writing this on Easter Sunday, "better the day better the deed." It is early to say how trade has been with all of us, but I can safely say that it was at least equal to last year and I expect to hear several say that it went beyond. The old-fashioned church decoration with a number of memorial pieces is about obsolete, although most churches devote to some extent. The great and leading feature of the trade was for several years past the purchase of plants or flowers to give to friends. Children sent a plant to Grandma, and Grandma sent a flower to Baby. Girls exchanged presents of flowers and of course the only girl in Freddy's eyes received violets or roses. Even in some extreme and remote cases a man sent his own wife an azalea or dwarf Japanese chestnut. The exchange of gifts is enormous and long may it be the custom of fashion with all classes. It blesses those that give and those who receive and incidentally helps the poor florist to lay up a little to spend this year at the Pan-American.

Lilies were in as much demand as ever and more could have been sold. Azaleas sold well but there were enough and a few to spare. Crimson Randalls went only fairly well. Pans of bulbous stuff went well and moderate priced plants like spirea went very well. Only plants in flower were wanted and palms and ferns were scarcely mentioned.

In cut flowers it would be hard to say which were the favorites of the three leaders, violets, roses or carnations; the latter touched the high water mark for price for this city. Lawson and the Marquis sold for \$2.50 and \$3.00 per dozen and no one kicked. This of course seems very humble to Mr. Thorley or Mr. Galvin, but we think it was doing finely. Different firms have a reputation for some particular flower, but certain it is that there were never so many violets sold on any previous day. Everybody wanted them, and particularly did Alphonse send a bunch to Mamie. Locally the weather was not ideal, yet it might have been so much worse that we are truly thankful. Cloudy and slightly chilly, but away above freezing, so altogether we ought to be well pleased with the first Easter of the Century.

Various Items.

Mr. Lorenzo Dunn, the expert fruit grower of St. Catharines, Ontario, had a good look over the Pan-American last week and went away greatly impressed with the beauties of the exhibition. Another well known Canadian, Mr. John Chambers, the superintendent of the Toronto Park System, had a good tramp over the territory. Such men as these can appreciate what it is going to be even if the last frills and tucks are not put on. Mr. Chambers, I believe, was surprised and delighted and will not forget to enlighten the thousands of Torontonians who will fire questions at him.

Perhaps many other lines of business have made the phenomenal growth of ours, but we hardly realize it. None have advanced on a surer basis. The love and fondness for flowers and the

liking to have them with us is a sentiment of marvelous growth in this country during the last quarter of a century, and is as sure to grow with all classes as is the desire to have a comfortable home with all who have the means. Thirty years ago it was only the very well to do who thought of indulging in roses and carnations. Now all classes claim their share of flower gifts. Good taste, refinement and appropriate accessories on the part of the florist should advance with the ever increasing demand.

Here is a little story almost word for word as it happened on Saturday during the rush. A little lad of seven or eight with lustrous black eyes and tattered clothing crept up to the counter and said, "Please I want a four-cent bouquet." The clerk in his hurry paid little attention but said as a joke, "It takes six cents to buy a bouquet," thinking that would dismiss the neophyte. He retreated, but turned up again in two or three hours. This time a young lady asked him what he wanted. "Please, I got six cents now for the bouquet." That would melt a harder heart than that of the good natured girl so the little fellow was given far more than the six cents' worth. "Will they keep till to-morrow, ma'am?" "Oh, yes. What are you going to do with them?" "They are for my mother. She loves flowers and I don't want her to see 'em till I give 'em to her. They're lovely and more than I thought I'd get. Thank you, ma'am." And off went a heart-ful of joy as a heart can be. If all our little boys were like him what a nation this would become.

W. S.

CHICAGO.

The Easter Trade.

The shipping demand for Easter was far larger than ever before and an immense amount of stock passed through the wholesale houses, though the supply of roses and carnations was short, as anticipated. The prices on roses and carnations went higher than advance quotations and the rates kept hardening until Saturday morning, when there was a decided relapse, as a lot of consignors then began pouring stock into the market, and in short order prices dropped from 25 to 100 per cent on most lines. Most of this could have been marketed at the high figures prevailing on Thursday and Friday, when the dealers were of necessity cutting orders short, and carnations that would have brought 84 readily on Friday were sold at \$2.50 on Saturday. But those who got their stock in at the right time got better figures than for some years past, and on the average it was a great Easter. There were lilies enough to go around, and while many were good, the average quality was some little below that of previous years. An immense lot of violets was sold and prices were good except on a big lot that came in Saturday, when it was too late to handle to best advantage.

There was an enormous supply of lullabies flowers in the market and a large percentage of them were of poor quality. First class stock brought good figures, but the great bulk was so poor it is doubtful if they brought enough to pay for the bulbs. Tulips that drop to

Easter Plant Arrangements. No. 6.

pieces while you wait stood no show at all. As to daffodils, Flint Kennicott says: "It rained yellow."

Roses were the scarcest right through and all orders were cut short up to Saturday. Outside buyers who got their rose orders filled were in luck. The outside calls, by the way, seemed uniformly for quality in preference to quantity. Carnations were also in very insufficient supply and those who had good earnings got banner prices with ease and comfort.

Locally the trade was probably a little larger than last year and would have shown a much greater increase had the weather been more favorable on the shopping days. The drizzling rain and raw air undoubtedly kept many from venturing out.

Some of the retailers overstocked a little on lilies, but fortunately all that failed to move for Easter were cleaned up by the large call for flowers in general on the following Monday. Probably the sale of lilies was hurt somewhat by the exaggerated advance reports in the daily papers as to the great scarcity and that prices would put them beyond the reach of all but the wealthy, etc. The florist who feels that sort of stuff to a reporter is an enemy to himself and everyone else in the trade.

Those retailers who had facilities for handling plants to advantage report an increased demand in that line and there is a continual development in that direction each year. We photographed a number of these plants and arrangements and reproduce some of them in this issue. Others will appear next week.

In plants the Crimson Rambler rose did not go as freely as anticipated, though many were sold, and hydrangeas hung a little, too. An encouraging sign was that the more expensive plants and arrangements moved more freely than last year with those florists who cater to the swell trade, but the great bulk of the sales were of the smaller plants, and pans of bulbous flowers formed the backbone of the trade in most cases.

Trade has been very fair since Easter. Quotations on roses now range from \$3.00 to \$8.00 and on carnations from \$3.00 to \$5.00 for fancy and \$1.50 to \$2.50 for commons.

Various Items.

At the first meeting of the new city council last Monday evening there was a great display of flowers, the mayor and many of the aldermen being literally buried in bloom. In the collection there were some wonderful "designs," but it all helped trade for the florist and made the Monday following Easter a lively one for many in the trade.

Mr. O. P. Bassett has returned from West Baden, Ind., apparently much benefited by his outing.

Mr. Luke Collins has taken a position as foreman for Mr. G. A. Heine, Toledo, O., and after April 15 Mr. James Psecneka will be foreman for Victor Bros. Mr. Psecneka has been in charge of a section for Victor Bros. for four years and was last year in charge of the carnation range.

Kennicott Bros. Co. say it was the biggest Easter in their business experience.

Bassett & Washburn say last Friday's

sales were the largest of any day since they have been in business.

Victor Bros.' sales were double those of last year. They were fortunate in having a big lot of carnations just at the right time.

L. Malcher has removed to 369 Wells street.

It was a mistake to attempt to hold a meeting of the club at a date so close to Easter, when everyone in the trade is on the jump.

ST. LOUIS.

Easter Trade.

Easter trade was fully up to the expectations of all the florists; the trade here was a little larger than that of last year. There was an increase in the sale of plants and all the retailers report excellent business. A great many of the orders came in at the last moment and some of us had to work half the night in order to get the orders in shape for early delivery Sunday morning. The plant trade did not present any especially novel features. The West End florists found the strongest demand for lilies and azaleas; foliage plants also sold well this year.

The wholesalers were kept very busy with both shipping and local trade. Great quantities of lilies were disposed of, they being in great demand. In bulb stuff there was a great glut; although lots of it was sold, still lots of it is left over only to be thrown in the waste box. First-class roses sold readily while inferior grades suffered. Some pickled stock came in as usual, which, of course, was left unsold.

High-grade Beauties sold well at \$5 and \$6 per dozen; Brides and Maids, from \$6 to \$10 per 100; Meteors, same; Gates, \$4 to \$8; Perles were very scarce. Cut Harrisii had a great demand at \$15 per 100; callas, \$12.50 to \$15. Carnations sold well at from \$4 to \$6 per 100. None could be had under \$4 and some extra fancy brought \$8. Sidelas were poor and good stock was very scarce. The demand was greater than the supply; 50 and 75 cents per 100 was asked for them. All bulbous stuff was very plentiful and generally speaking good in quality; prices were about the same as usual and the demand fair.

The majority of the florists had their windows handsomely decorated. Ellison & Tesson, Rierson Floral Co., North and C. Young & Sons Co. had a fine display of Harrisii in pots, azaleas and other blooming plants with a fine assortment of cut flowers. In the West End, Weber, Eyers, Waldhart, Newman and others, also made fine displays in their windows, consisting of fine blooming plants of all kinds and a large assortment of the choicest cut flowers.

The growers in the South End report a great plant trade and Schray, Fillmore, Beyer and Windler had all they could do to supply the demand.

Notes.

Report comes from Washington, D. C., that Prof. B. T. Galloway, of Missouri, has been assigned as chief of the proposed Bureau of Plants.

The Missouri commissioners to the Pan-American and Charleston Exposition held meetings last week considering plans for the construction of the Missouri displays at these exhibitions. The following committee: Messrs. E. S. Gar-

Dr. John T. Blair, John M. Vest, C. C. Bell, F. P. Graves, reported only March 23, have already done their work. It is greatly desired by those from the State and County Horticultural Society cooperate with them in an display of fruits. Prof. Trelease of the Missouri Botanical Garden, will kindly contribute palms and other plants in locations. The meeting will continue all of this week. J. J. P.

BALTIMORE.

The Easter Trade.

The clouds have hardly cleared nor the combats rested after the battle so that an adequate estimate can be formed of the operations of the day, and the point of view of the observer, doubtless, will influence the verdict as to the Easter trade.

To an onlooker it would seem that the plant decoration of windows and rooms was hardly equal in extent to last year's. For personal adornment there was less than the usual opportunity of display, the weather being windy and raw, so that the customary parade on Charles Street was not a thing to be indulged in longer than was necessary to go through the form and display new hats, gloves and wraps. The women were mostly violets, great bunches reaching into the hundreds and almost into thousands, adorning their corsage, but some American Beauties were worn, though under trying experiences from the wintry breezes.

Saturday was ushered in by a diving rain, not so cold as penetrating and depressing, and as it came down until near noon the spirit of the dealers sank with it, as it threatened to break up the day's business by keeping people off the streets. Toward afternoon the downfall ceased, but the clouds were dull and leaden, with no inspiration of glad sunshine. Notwithstanding, people thronged the stores and market stalls and the buying continued lively until nearly midnight.

Yet we believe on the whole, there was not the complete clearing out of all kinds of stock witnessed in some years. Perhaps this is due to the larger preparations made, for, taken altogether, the consensus of opinion seems to be that never were there more flowers sold, especially in the markets. Of cheap stuff, hyacinths, tulip- and narcissus, there was too great a supply. Calla lilies were in excess of requirements, although there seemed to be at first an insufficiency in sight. Carnations were good and about proportioned to the demand. Of white and Perle roses there was a shortage, but Beauties and pink roses were fairly abundant. Harrisii lilies were not to be had, and many orders went to our consins of the City of Brotherly Love. The sale of violets was enormous, but more were still wanted and would have been readily absorbed.

The azalea was not in as high favor probably as in former years. Perhaps this statement should be modified to refer to plants of some size. The market men were provided with small well bloomed plants, which found great favor, selling at 75 cents and one dollar, which is a figure at which most buyers of a single plant in the market stop. The Crimson Rambler did not go, as in the days of its earlier introduction, and at several stores today (April 8) fine samples are on hand on-hand.

The "stories" in the daily papers did a conspicuous disservice, as usual, to the trade by their exaggeration of the prices and cupidity of the florists. Many persons, who would otherwise be buyers, are frightened off from even trying prices by these exaggerated fictions.

The Florist's Exchange did, as usual, a rushing business, demonstrating anew its lack of capacity of room and accommodations to properly handle the material which comes to it. Ampler quarters would lead to more business, the better handling of stock and to the peace of mind of the buyers.

Various Items.

The market missed the large contributions usually coming in of carnations from John M. Rider, whose houses were partially, and his stock entirely, destroyed by fire some weeks ago, resulting in a loss to him of something like \$2,000. A number of the gardeners banded together lately and went down to help him straighten things up somewhat. The houses will be rebuilt. Mr. R. has the sympathy and good will of the entire trade, for he is a good fellow, built on a broad gauge, and one who has achieved marked success as a grower.

Following promptly on Easter are a number of large seedlings this week, which naturally will call for many flowers. There will be no scarcity, but the growers are all telling now how different things might have been had bright sun-biny days taken the place of the rain and clouds of last week.

Theodore Eckhardt, a well known gardener here, widely known for his contributions on horticultural subjects to the trade and daily press and who established some years ago a large commercial establishment near this city, has reconsidered his determination to go back to Belgium and has accepted a position at the Springfield Insane Asylum, a state institution, where he will lay off the grounds and superintend the garden work in general. The appointment is one received with much favor, as Mr. E. is a capable and active man.

New houses continue to go up. Two are noted at Woodberry, the builder at this writing unknown. Another erected for carnations at Melvale by Mr. Baker, and a party was lately looking about Mt. Washington for a suitable site for a large florist's plant. There is consequently no probability of a death in the flower market. R.

BOSTON.

Trade Conditions.

The general run of retail trade was very quiet for Easter week up to Saturday morning. This is especially true of classes of goods not usable in funeral work. But of course all were busy in anticipation of a rush the latter part of the week. Many branched out into temporarily enlarged quarters. All put in a heavy stock of potted plant life, and all salesmen of out flowers hustled to obtain orders ahead. When at last they got their feet placed business did not open up and the lowering skies produced a rain storm, which began Thursday.

Saturday morning a boom opened like the polar current rushing through the Straits of Belle Isle. It was felt first at the wholesale establishments where things jingled merrily in the morning.

The witches of Macbeth seemed to have control at the Co-operative Market. It was surely "Bubble, bubble, toil and trouble." To this add equal parts Donnybrook Fair and Baltimore riot, ad lib, and move the decimal point twenty places to the right. "Such a peesness!" But all kinds of goods were plentiful enough to fill all orders at low prices even though there was a demand for something all day long, because at the retail stores it soon became almost a chaotic. Toward night it began to rain again and Saturday night was one of the juiciest ever known. But traffic kept right on, even the unprotected street fakirs pushing their sales among the home-going after-theater people in the downpour. There was quite a little left to attend to on Sunday, but not so much as usual, I have an idea.

Points.

Double violets were delightfully plentiful. Roses came in a mighty close second. Prices on unengaged plants fell from twenty-five to fifty per cent. Good lilies soon became very scarce and toward night poor ones did even, and prices advanced on them every hour of the day. Single violets were scarce. The new continuous performance theater near Galvin's store is all right. The average of the lilies at Easter was rather poor. They had to be rushed too fast the last few weeks of their growth.

J. S. MANSTER.

INDIANAPOLIS, IND.

Meeting of State Society.

The State Florists' Association held its April meeting at the Denison House, and by request of President William J. Berterman of the Carnation Society the consideration of and laying plans for next year's carnation convention was made the chief order of business of the evening. There was a good attendance and every member seemed anxious to help make the very best convention in the history of the society, and if the present interest is kept up it surely will be, as we have the men to do it. President Haugh was in the chair and after the matter was thoroughly discussed he appointed a nominating committee consisting of Messrs. E. G. Hill, F. Dorner, Jr., H. W. Reiman, J. S. Stuart and J. Bertermann, with instructions to appoint other committees as they deemed necessary.

This committee was afterwards made an executive committee. They appointed the following committees to arrange for the convention: Finance, H. W. Reiman, J. Evans, M. Heller, F. Dorner, Jr., Geo. Weigand. Exhibition, J. S. Stuart, F. Lemon, E. A. Nelson, J. Hartje, J. Bertermann. Entertainment, E. G. Hill, J. A. E. Haugh, Ervin Bertermann, Wm. Billingsley, H. Junge, Reception, R. McKeand, F. E. Alley, A. F. J. Baer, F. Huekride, W. W. Colex. Every member present agreed to become a member of the Carnation Society and we hope to have a good many more throughout the state within a month or two.

President Bertermann read a communication from the German House Society offering part of their clubhouse for the meeting and exhibition, and several who have attended various conventions say that it would make an ideal meeting

place. We would rather see it a few blocks farther down town, so it would be handier for the public, but there seems to be no suitable place right in the down town district. The rooms in the Denison House, where it was held several years ago, are far too small to hold us now with our multiplied membership and extensive exhibitions.

There was a table full of choice cut blooms and plants brought in by various members. Stuart & Haugh showed several varieties, including their Avondale. J. Hartje showed several seedlings that looked like trotters. Bertermann Bros. brought some nice tulips. E. C. Hill brought over some roses that attracted much attention. A vase full of a red seedling of his own raising looked to be a fine thing, and a large bright pink bloom which he said was the first bloom from a seedling plant was simply grand. If it forces well it will be a good one indeed. E. A. Nelson showed a good specimen plant of *Spiraea multiflora* superba, also a few blooms of his pet carnation.

Those present from out of the city were E. G. Hill, Fred Lemon, J. A. Evans, from Richmond; J. S. Stuart, J. A. E. Hugh, from Anderson; F. Dorner, Jr., from Lafayette; J. W. Bernard, from Marion. We missed our friend Kaiserin Augusta Victoria Coles, from Kokomo, as he is usually on hand when something of importance is going on.

Easter Trade.

Easter trade as far as can be judged at this date was as good as last year, but if the weather had been good the latter part of the week it would have surpassed last year at least 25 per cent. The past couple of weeks have been very dark, and Saturday and Friday preceding Easter were damp and chilly, thus preventing many people from venturing out who would have bought flowers. The supply of cut roses and carnations was just about equal to the demand, and in most cases the quality was good, considering the weather we have been having for several weeks. Plants in some lines were abundant, while in others the dark weather kept them from blooming out in time. Lilies and azaleas were abundant, also all kinds of bulbous stock, while hydrangeas and Crimson Ramblers in most cases failed to develop in time.

Wiegand had the best line of plants they have ever had of all kinds, and they report sales heavy and prices good. Bertermann Bros. had their store fixed up fine and the conservatory in the rear was a blaze of color. J. Rieman also had his store filled with choice stock. All the growers are satisfied with the business done, but could have sold much more if they had been able to cut more.

E. A. Nelson intends building four new houses this spring for his new carnation. John Hartje has started preparations for moving part of his houses, so as to have them all in one range.

E. Hyatt, foreman for Stuart & Haugh, at Anderson, was a visitor last week, also Mrs. Mathes and V. Beyers, from Franklin.

PITTSBURG.

Easter Trade.

Easter trade was good considering the miserable weather we had the last four days of the week; if the weather had

been better it would have been a record breaker.

Stock was pretty well cleaned up except bulbous flowers, which were plentiful. Good lilies sold well, a good many poor ones are left over. Carnations, violets and good roses were more in demand. Prices about same as last Easter. More plants are sold here every Easter. Some very pretty things in plants were seen at Breitenstein a Fleming's store a few days before Easter.

Carnations were rather scarce a week before and up to a few days before Easter, retail men and wholesalers cursing the growers for holding back stock for Easter to get better prices. Now, when these same retail, also the wholesale, men ask the grower two or three weeks ahead "How many of this or that can you give us for Easter, we need so and so many," what is the grower going to do to accommodate them unless his houses would all come in with a heavy crop just for the right time? I believe every sensible grower would be satisfied to send his flowers in every day in place of holding them if he would get a better price for the whole week instead of only for two or three days.

About 40,000 people visited the Easter show at Scheuney Park Easter Sunday.

BABEL.

NEW YORK.

Club Meeting.

The meeting of the Florists' Club, held on Monday night last, was fairly well attended considering it was so soon after Easter and all were tired out. Of course Arthur Herrington's fine paper on "The Land of the Olive" was an attraction and was well worth listening to. Mr. Herrington showed many views illustrating his graphic account of the land of Sunny Sicilies. With Walter Sheridan in the chair every club meeting transacts a vast amount of business. The committee on the club's summer outing promised a report at next meeting. The preliminary schedule for the October show was distributed among those present.

The Ways and Means and Exhibition committees will meet at the club rooms April 23. A full meeting is specially requested, as business of great importance must be acted on.

Messrs. Lager & Hurrell exhibited one of their beautiful new cattleyas. The committee awarded it honorable mention. Mr. Herrington exhibited some blooms of the very showy Gebera Jamesoni, which were awarded a certificate of merit.

Easter.

Easter was expected to be a record-breaker and immense preparations were made for it, and a record-breaker it was to be sure, but a heart-breaking one. "The worst Easter I ever had," is the answer from all except the grower of plants. The grower of cut flowers and the wholesaler needs the utmost sympathy in the density and blackness of their wrecked hopes. They must remember that it was the weather, and only the most urgent necessity could justify anyone going out to buy plant or flower in the deluge of rain that poured continuously on the accustomed purchasing days. The retailers plunged heavily in plants and left the cut flower market to shift for itself until the last;

then no flowers were bought, only those needed to fill orders. It was a case of pushing plant sales to save themselves. High prices were asked up to Saturday morning, at which time the market went to pieces. Prices swelled but can be written of them. To be sure the cream of the market, that is a few thousand roses picked from the immense quantity sent in, brought a fairly good price, but the average stock could not get at any price offered. It was a sad Easter.

New York never saw so many plant failures. The quality was only fairly good, but the trimming and arranging spoiled in beauty and good taste.

J. I. D.

THE FATE OF THE FLOWERS.

Translated by Alice May Downes, Easter Show, 1901.

They have by choice one Easter more
 Me within my lady's tower—
 One to be sold, another to be sold,
 The other a fragrant fragile flower.
 Each raised by hands with gentle care,
 Each from the loath and moist shade
 Then kindly plucked from parent stem
 To people some winsome little maid.
 How sad our lot," quoth the vineyard man,
 "Though sweet while bloom and beauty last,
 A few short hours of grand repose
 Then, like all things of the past,
 No sacred bourn is deemed so fair
 But we without one jealous thought
 Of our lonely child and rustic throng,
 And loathe the vesper chorused solemn
 Sun-kissed, feast and wedding day—
 That binds the heart and being tight,
 We cheer them in their happy way.
 Our presence lends a peaceful air,
 But when we draw our withered leaf
 Or show our sorrow in decay—
 Soon forgotten—oh! we're cast
 Our life is spent, we've lived our day."

WILLIAM A. CUNNINGHAM

IN THE LAND OF THE OLIVE.

Read by Arthur Herrington before the New York Florists' Club April 8, 1901.

It was a rapid transportation from the rigors of winter at its worst to the joy and exhilaration of spring in its most genial aspect—from leaden skies, still air and a frost-bound earth to glorious sunshine and its responsive life in tree and flower and song of birds. At 8 p. m. two travelers in winter garb shiveringly awaited the departure of the south-bound "Rapide" from the Gare de Lyon, in Paris. At 10 a. m. next day the same two travelers sought the shaded side of the streets of Marseilles while walking out to the garden of M. Fournier, a place charmingly situated in the suburbs of the city, with commanding views of the busy seaport and the blue Mediterranean beyond. Here we got our first glimpses of that wealth and variety of vegetation that makes the Riviera a paradise to plant lovers, the garden spot of Europe. Here plants like cocos, bamboos, magnolias and camellias, grouped and massed, show the garden possibilities, of which more will be said anon, in the "sunny south." But even Nature in her kindest mood as seen here fails to satisfy M. Fournier, whose first love is for orchids, so the houses containing them are visited. But without giving details mention must be made of about 10,000 seedlings in various stages of advancement, and not a few, once again a result of abundant sunshine, about to flower, though less than three years old.

Leaving Marseilles by an afternoon train

Hyeres

was reached shortly after dark, and the road to the hotel was through an avenue of phoenix of great size and beauty. The plant, flower, fruit and

vegetable industry of Hyeres is enormous, and we made an early morning start to see and learn something about it.

Traversing the long-mentioned avenue of palms, of which there are a double line on each broad sidewalk, our attention is attracted by a novel tree, planted alternately with the phoenix, a tree that at first glance looks like a juniper, but possessed of a slender, airy grace, foreign to that genus, when it suddenly dawns upon us we are confronted by an Australian tree, and it is *Casuarina tenuifolia*. Here it was a beautiful subject, shooting up clear and straight and conical, like a hemlock, with feathery like that of our white pine and the slender, plummy grace of the tamarisk. Some of the trees were 50 feet in height. It was a singular association, whether by accident or design I could not find out, but it would be a wise thing to take away all the phoenix, and let that aceme become one of the most unique features of the Riviera.

Passing a number of small gardens, all filled with oranges and the ground close cropped with violets, anemones, Roman hyacinths and narcissus, we reach the Jardin de Ville de Hyeres—a sort of public garden containing fine palms and other exotics, all, of course, in the open air; but its feature was its eucalyptus trees. There will be occasion for mentioning this tree later on, but to this garden must be credited the largest specimen seen during the tour—a truly gigantic tree, with a trunk girthing nearly 15 feet and an enormous branch-spread. Yet we were assured that this tree was only planted in 1874.

We next visited the

Jardin du Gros Pin,

which takes its name from a magnificent pine tree standing therein. This was a purely commercial establishment, in short, a phoenix manufactory, where Phoenix canariensis is raised in thousands for thousands for shipment to florists in northern cities. The plants are raised from seed, potted, plunged in nursery beds, grown in full sun and watered by irrigation. At the time we saw them (February) they were protected by hurdles made of the southern heath, *Erica mediterranea*, laid on a light frame construction. Blocks of air being covered in this way, this beds as occur here, while admitting enough light and air to the plants throughout the period of desired protection. Doubtless many readers are familiar with these open-air-grown phoenix, which in three years make stocky plants, about two feet high, and are then shipped north, put under glass, plunged in a bed of tan or other warm material, and in a few months, having made a new set of leaves, are on the market. So sturdy and hard grown are these plants that for shipment north they are packed solid in box cars, as one would load a car of lumber; in fact, we were assured only by the possibility of shipping them in this way could profits accrue.

Besides these small grades, about two acres of ground was covered with a structure made of bamboos and about 15 feet in height, filled entirely with phoenix and growing bamboos by hundreds, in pots and tubs—a grand lot of stock.

A comparatively new culture, too, is the *Aspidistra*, grown in the same way and with surprising results.

The nurseries of MM. Conforrier & Burlet and M. Clin were next visited—a repetition of the foregoing turning out of phoenix in prodigious quantities by similar cultural methods.

Next we visited the establishment of M. Delor, and were introduced to cultures of a totally different character.

By way of preface it should be mentioned that this fertile valley of Hyeres was once a great orange grove, but when orange culture began in Spain, Corsica and other southern latitudes it ceased to be profitable at Hyeres, and the necessity arose for other more remunerative cultures afove. M. Delor worked out his own salvation by growing roses, or, in strict truth, one rose. Doubtless many of us are familiar with the beautiful bark of market of northern European cities from November onward, and know they are shipped up from the south. M. Delor claims to be the pioneer in this industry, and we saw abundant evidence to substantiate his claim. After several years of experiment he became a one-rose man, and that one rose Safrano. Now he has acres of it. But of especial interest was his original plantation, made 25 years ago, the bushes still vigorous and productive. The way it is profitable is an interesting instance of adapting methods to conditions and environment. Safrano or any tea rose is practically evergreen and never really dormant. In summer heat the flowers are full-blown and useless in a few hours. But the bushes are given a hard pruning early in September, and the resultant growth gives a crop of bloom at a time when the days are shorter and cooler; the buds are cut hard and shipped north packed in light wicker baskets. There are large plots of this rose of different ages, all plants on their own roots, growing in rows about two meters apart, with alternating rows of grapevines.

M. Delor is a plant lover, too, and has surrounded his house with a collection of the choicest. You approach his place through an avenue of Phoenix canariensis, which was as fine as anything we saw. They stand about 24 feet apart, have enormous clear stems about 8 feet high, immense heads of leaves, the tips just touching those of the next plant; and when we saw them all were heavy in fruit, and the effect of the great clusters of yellow fruits beneath the dense umbrageous heads of foliage was extremely beautiful. Alternated between the phoenix were gigantic agaves. The next thing to command admiration were his acacias. The mimosa of the northern flower markets (*Acacia dealbata*) was everywhere in evidence about Hyeres, in full blossom, but a group at M. Delor's made an impression that will never fade from memory. The trees were about 40 feet high, though only planted in 1882, with spreading heads, branched to the ground, and seen from a short distance in bright sun, beneath a deep blue cloudless sky, it was a picture of beauty to which no words can give adequate utterance nor artist's brush reproduce. Several other species of acacia were also in flower, one particularly deserving of mention being *Acacia cultriformis*, having small triangular leaves, like those of *A. armata*, but of a bright silvery color, the shoots terminated by branching panicles of feathery yellow blossoms.

Pittosporums, eriostemons and other handsome Australian shrubs were noted,

and last, but far from least, we had come all this way to see and realize the beauty of an American palm, a beauty that words fail to convey and that we in the eastern states know nothing of, or we would surely have it. The palm is *Brahea* (*Erythraea*), and as growing in the open ground here surpasses in beauty any palm the writer has ever seen growing under any condition. There were several specimens, the best of them having nearly 100 leaves, in color like polished silver. The bluest of blue spines growing here would look dull in comparison with this plant. Cannot we have it? We would have to grow it in tubs, but outside in summer it should assume as good color beneath our summer sun. *Brahea* (*Erythraea*) edulis was also well grown and abundant in fruit, which we were privileged to taste and found it pleasant, the hard seed enveloped in a sweet pulp.

The Villa Amelie, a private garden, was next visited. Australian plants being the hobby of the at-one-time owner; and here again acacias, eriostemons, metroderas, pittosporums, haekas, and others too numerous to mention made a garden unique of its kind, with *Grevillea robusta* as a crowning feature, and a revelation to anyone knowing it only as the small plants we have in pots; whereas here was a group of trees 30 feet or more in height, with stems girthing 3 to 4 feet, yet still possessed of all the feathery grace of foliage that commends it to our favor in a small state.

Much more of interest might be said of Hyeres and its products—the acres of bulbs, especially Roman hyacinths, the best grown in Europe, the acres of Globe artichokes, the vineyards and fruit gardens and fields of early vegetables.

Leaving Hyeres we were truly in the

Land of the Olive,

a tree of such a distinctive type of beauty, as well as utility, so characteristic all through this maritime district, that after one has seen all that is fairest and best, native and exotic, still the olive comes back to mind as the predominating feature of the natural flora. For miles we pass through olive orchards, where the tree is made subservient to cultural methods and its beauty gives way to utility, a system of pruning prevailing which keeps it low with a flat head, so that its fruits can be gathered standing on the ground. These olive orchards abound on both sides of the railroad till we come to

Cannes,

in and near to which are palatial homes and gardens of exceeding beauty. The first place visited was the Villa Rothschild, owned by Baron Alphonse de Rothschild, and though comparatively small in area, the garden is filled with plant treasures.

A hedge of bamboo 20 to 30 feet high makes a perfect screen from the public streets and a fine background for the massive plantings of palms, agaves, aloes, etc. Near the entrance and first to attract notice is a magnificent specimen of *Coccos flexuosa* var. *Marie Rose*, with a stem about 30 feet high, surmounted by a splendid head of leaves. The silvery *Brahea* Roetzii was seen in fine specimens, while the massed plantings of phoenix and washingtonias were truly of tropical luxuriance.

As a substitute for grass beneath and around the palms, *Ophiopogon Jaburan*

McKELLAR & WINTERSON

was used and kept as close cut as the grass. Preparations were advanced for the annual March display when the Baron occupies the villa, and we were permitted to view the stock which is brought into flower in a nursery garden close by and then transferred to the beds and borders of the villa garden when in full flower. Five thousand hybrid perpetual roses are forced for this spring display, besides rhododendrons, azaleas and bulbous stock in enormous quantity, the latter, of course, requiring no forcing; but being grown in pots in frames. Mr. Rans is the able gardener of this lavishly adorned place.

Close by, in the Villa des Lunnes, we saw the finest Araucaria Bidwillii in the south of France, an immense tree, 50 to 60 feet high, and of great branch-spread.

We next visited the extensive domain of Lord Rendel, a place beyond the limits of the town, and extending far up the mountain side it possesses unique and varied features. In its lay-out and development the old olive groves and terraces, planted with oranges, have been preserved and combine effectively in the garden scheme. The washingtonias beside the main drive are superb and the phoenix magnificent. A specimen of *P. senegalensis* was noted, heavily fruited and very effective, its fruits being of a rich plum-purple color. Memories of many more beautiful things seen come back, too numerous by far to give in detail here. From Cannes a short excursion was made inland to

Grasse,

a quaint old city famous for its perfumes, and worthy of a visit, if only to see how flowers for the perfume distilleries are grown. To the right and left and below the city, which stands high on the mountain side, are miles of narrow terraces planted with jasmine, roses and other flowers, cultivated under conditions that would seem absurd, only none other are possible. Here is a beautiful country, delightful to live in, favored with a genial climate, and now richly productive, but at what cost! Those long lines of terraces rising tier above tier testify to efforts almost superhuman before the steep, rocky mountain slopes became amenable to cultivation. There was no choice in the matter, and terracing only stops when impossible. The largest and loveliest garden in this paradise of flowers is at Grasse and belongs to the Baroness Alice de Rothschild. A day was spent in it, but no attempt to express in words its varied charms and floral richness can picture it to you. About the house are fine groups and noble specimens of palms, dracenas, agaves, aloes and bamboos, and here again Brahea Roezli stands out con-

spicuously and strikingly attractive, a plant unique in beauty. From the villa the garden extends up the mountain to an elevation of about 1,000 feet, easily accessible throughout by a cleverly built winding road some two miles in length and of easy grade. A mountain side of olive trees has been transformed into an immense garden by a careful association of shrubs and flowers that make it replete with interest and variety, and yet at all times the charm of the olive is supreme. At a still greater elevation you rise above the olive zone into the pine belt, and here again is noted the same clever association of allied and harmonious types—mature improved by art. Here also we saw, and only at some such elevation can you see and realize, what beauty is in a country full of olive trees. The scene was one that will never fade from memory. Before us and to right and left over many square miles of country nothing but olive trees fanned by a gentle breeze, shimmering in sunshine, their glistering silvery leaves, like millions of tiny mirrors, reflecting dancing sunbeams.

(To be continued next week.)

Easter Report.

The fore part of the week it seemed as though we were going to have a hot Easter, the temperature going as low as 14 degrees at night. The weather indications for Saturday were rain, wind and gales. The rain ceased about 10 a. m. and the remainder of the day was fine, helping to make the business good. Delivery was easy, no plants having to be wrapped. Carnations were scarce, and on Wednesday and Thursday, the main shipping days, all orders had to go out short on some variety, white being the most in demand and shortest in supply. The quality of most of the carnations bought was but medium. Roses were good and some were extra fine quality. Some extra fine blooms on strong, stiff stems brought \$2 per dozen, the regular price being \$1.25 to \$1.50, with Beauties from 15 to 75 cents each. Violets were plentiful and bulb stock a glut; large quantities were sold, but there was too much of it. Lilies were none too plentiful. The best grade sold out to a plant, the second grade with small flowers and short plants, sold well, but did not go as quickly as the larger blooms. As predicted, a large percentage of the lily crop missed Easter, there being plenty of lilies now.

In plants, lilies sold best and brought 15 cents per flower and bud, everything counted, and as there were many buds to few flowers the price was profitable. Cut blooms were \$2 per doz. The demand for fine azalea plants was never better, while hydrangeas moved very slowly. No matter how fine the plant, no one seemed to want hydrangeas. Palms and ferns also seemed to have passed out of the list of desirable selling Easter plants. Hyacinths, tulips and daffodils in pans at 25 to 50 cents a piece sold very well indeed. Spiraea did not sell at all.

The volume of trade was about the same as last year. Everybody did a good business and all are satisfied. More good lilies could have been sold. Everything salable in roses and carnations sold out close. Carnations brought 60 to 75 cents per doz., and at a large dry goods store they were sold at 40 cents per doz. It is not known yet who furnished the flowers or their quality. The weather is now warm and sunshiny.

Crabb & Hunter rented a down town store, and did a heavy business in potted plants, no cut flowers being offered.

G. F. C.

THE BEST IN THE U. S.

Please take out my advertisement, as I have sold all my pansies. You have the best paper in the United States to advertise in. I could have sold 50,000 more plants. Had to refuse lots of orders. J. L. ELLIOTT.

MILWAUKEE.

The Easter Trade.

From opinions of the trade the Easter business seemed to be more than satisfactory. There were enough cut flowers in all varieties to go around, especially lilies, in which a shortage was mostly expected the early part of the week. The most noticeable feature was the great demand for blooming plants, which shows that these are more in favor than cut flowers for this holiday. The supply of lily plants was about equal to the demand, although most of them were late this year.

Many fine window displays were made, most noticeable being Jas. Fox, whose window was filled with large, fancy baskets filled with cut flowers and plants. M. A. McKenney & Co. displayed a fine lot of Crimson Ramblers and azaleas, while Horne Bros. displayed a fine lot of lily plants, backed up with palms and asparagus. Currie Bros. were showing an immense stock of plants in all varieties. Edlefen's conservatory in the rear of their store was completely filled with a choice collection of plants, and their large show window was an attraction to passersby.

At the market one could get any variety of plants desired and many of the old-time favorite plants displayed there seemed to be as popular as ever. Mrs. Emis, the Grand avenue florist, is still counting the receipts of Saturday's trade, and P. Kapsalis, whose lease expired in his present location at the close of Easter trade, has reaped enough harvest to carry him through the summer dullness. C. C. P.

WEST BAY CITY, MICH.—William Reuther, of Wm. Reuther & Sons, the florists, died suddenly of heart disease April 8, aged 69 years. He was born in Stuttgart, Germany, but had been a resident of this state for 37 years. He is survived by his wife and six children. The business will be continued as before by the sons.

AUGUSTA, GA.—The residence of Mr. W. K. Nelson, the nurseryman, was recently destroyed by fire, the loss on the house being total. Fortunately a good share of the household effects were saved. A number of outbuildings were also burned. Mr. and Mrs. Nelson have the sympathy of a host of friends in the loss they have sustained.

NEW CASTLE, IND.—Peter Weiland will start building the new plant inside of a week. He has already unloaded twenty-two carloads of material and expects eight or ten more, including the boilers. Scraping the ground is now going on.

POUGHKEEPSIE, N. Y.—At the April meeting of the Dutchess County Hort. Society, Mr. J. L. Powell read an interesting paper on carnations.

NOVELTIES

OF REAL MERIT are always worthy an investment. They always bring good returns. All the leading Novelties in Geraniums, including the best of last year's and 1909 varieties. This year's leader is our new dwarf "Little Pink." No doubt you have heard of it. The only dwarf Geranium ever awarded Certificate of Merit by the S. A. F. "Clyde" is the best Mammoth Broom of its color. Strongest grower we know of. An A No. 1 bidder. All of this year's New Carnations, also standard sorts.

Send for our descriptive price list, which also tells you something of the best Garden Wheel Hoe on earth. W. E. HALL, CLYDE, O.

NORWAY MAPLES,
3 to 4 Inches Caliper,
14 to 15 Feet in Height.

We have a fine block of 2,000 trees that have been grown 6 feet apart, perfect specimens with good heads and perfectly straight trunks.

Nephrolepis Wittboldii.

Plant of Nephrolepis Wittboldii.

If you haven't yet obtained a stock of this grand new commercial fern you will make a mistake if you do not do so at once. A dozen plants now will be the best investment you ever made.

All who have bought it recognize it as possessing those qualities that will make it a money maker from the start.

Remember we are not sending out weak, puny plants, but Strong, Vigorous Stock that will immediately produce runners if planted out in the bench.

We are offering fine plants, ready for 3 and 4-in. pots, at

**\$1.00 each, \$10.00 per doz.,
\$75.00 per 100.**

See our offers of **PALMS, FERNS, ASPARAGUS, CYCAS and IVIES** in Classified Ads. in this issue of the Review.

Your Last Chance on GERANIUMS.... 40,000 Rooted Cuttings Ready to Ship.

Our last crop of Geraniums which we will offer in rooted cuttings is now ready. Our stock is all grown in benches the same as roses and carnations, consequently our cuttings are far superior to the stuff chopped off of pot plants, most generally sent out. Strong selected top cuttings, well rooted, ready for 2 1/2 inch pots of the following superb varieties - Braunt, Grant, Heteranthus, S. A. Nutt, Frances Perkins, Mrs. E. G. Hill, Beate Poitevine, Mme. Jaulin, Mme. Braunt, La France, Mrs. J. M. Gaar and La Favorite, \$2.00 per 100; \$18.00 per 1000.

PETUNIAS, double fringed, 8 novelties. White Fawn, Snow-Ball, Mrs. F. Sander, Pink Beauty, Fuchsia, Helen Gould, San Juan and Bonnie. 20,000 strong rooted cuttings well rooted, that will make saleable plants in a short time, and ready for immediate delivery, \$1.00 per 100, \$4.00 per 1000, in variety. Any special variety, \$1.50 per 100.

NEW AGERATUMS, Stella Gurney, the grand novelty of 1900, and Snow Drift, the peerless white, strong 3-inch stock plants full of cuttings, 50c per doz., \$3.00 per 100. Strong rooted cutting, \$1.00 per 100. Louise Bonnat, latest novelty in white, and Princess Pauline, latest blue, strong 2 1/2 inch, \$1.50 per 100; strong K. C., 60c per 100. (special).

NEW SALVIA, St. Louis and Splendens, strong 2 1/2-inch, \$1.50 per 100; strong K. C., 75c per 100. (special).

We are the largest manufacturers of wire work in the west. McKellar & Winterson, 45, E. 4th Wabash Ave., Chicago.

Reed & Keller, 122 W. 25th St., New York, Manufacturers of Wire Designs.

E. H. Hunt, 76-78 Wabash Ave., Chicago.

TORONTO.

Easter trade here was about ten per cent in advance of any former year. All stock was pretty well cleared up. Hairsii and longiflorum found ready sale and were about equal to the demand.

Most of the growers were able to get their plants into good bloom this time and some very nice stuff was to be seen. In cut-stuff roses and carnations were quite scarce, owing to the very bad weather all week which kept very cold and extremely dull with occasional showers.

The Stores.

Tidy showed a pretty window with an immense vase of Beauty roses with from three to five foot stems. Dunlop displayed some beautiful pieces of bougainvillea, rhododendrons and lilacs—the windows at both stores being very pretty indeed.

Simmons made a very pretty display, his window being of pink and white with doves suspended on pink ribbon and hanging over and among the bloom. Some very nice Bride and Maid roses were also to be seen here.

Jay & Son, of Spadina avenue, had a very large and select stock on hand and were able to clear out in splendid style.

The Growers.

The Dale estate sent in grand Bride and Maid stock, also a fine lot of lilies.

The Toronto Floral Co. had a fine lot of roses.

Manton Bros. had some good azaleas and H. P. roses in pots. These went without a murmur at good prices.

W. J. Lawrence had a nice cut of Beauties, some selects bringing the top price. His Brides and Maids were in good shape, as were also his carnations, with a splendid stock of longiflorums and spreads, all in good time.

W. J. L.

The Best is the Cheapest in the long run. Houses built of OUR MATERIAL don't have to be rebuilt every few years.

Our material costs more than that furnished by local planing mills.

But it stands longer, as many who have both will certify. It pays to pay for quality.

If you contemplate building, write us for prices.

ERE, PA.—The Schluraff Floral Co. have purchased the Titus-Berst greenhouses at 20th and Poplar Sts. It is their intention to close these houses to the public and devote the space to the growing of roses, carnations, Asparagus plumosus and smilax. These houses added to their plant at 24th and Poplar Sts. makes a total of about 60,000 square feet of glass. They have also leased a store at 22 West 9th St.

GEORGETOWN, KY.—C. H. Brown & Co. are building a range of greenhouses.

Awarded the only first-class certificate of merit by the Society of American Florists, at Boston, Mass., Aug. 21, 1890, for Standard Flower Pots.

The Original Garland Valley Gutter and Drip Conductor.

The Gutter is the Foundation of the House.

It has stood a ten-year test and I can warrant that it will last fifty years longer. Will outlast one dozen galvanized or steel gutters, as steel is the poorest material for greenhouse use. No breakage of glass by frost or ice. Only seven inches of shade in December. No drips from condensation when proper humidity is maintained within. No wires to hold bars to gutter; wires are for supporting ridge pole without using ridge pole posts. Simplest and easiest to erect, never sags or gets out of line. Made in my own foundry, of No. 1 Lake Superior cast iron. Do not make a mistake by putting in untested devices, but get into the band wagon with the successful growers who have tested the Garland Iron Gutter and Drip Conductor. The following is a partial list - write them:

A Man's Lawn

will never look smooth and "velvety," the rank crab-grass will never be straightened up so it can be cut off, and the grass will never grow so thickly until he invests in that modern lawn beautifier known as a

Finley Rotary Lawn Rake.

Papa! We Can Rake Your Lawn.

It only came out last season, and from gardeners, parkmen and others an avalanche of testimonials has come to us, all of them saying in substance:

"This is the greatest invention of modern times in its line. We couldn't do without it."

A child can push it. You need one if you have a lawn. It runs easy, is simple, strong and the only thing of its kind. We have a descriptive circular selling all about

this Lawn Rake and containing testimonials from users in all parts of the country. We want you to have one and will mail it free for the asking.

THE RETAIL FLORIST.....

Wedding Decorations.

Church and house decoration for weddings and other forms of festivities are about the most important matters to discuss this week with the retailer, and the many other subjects, particularly of matters pertaining to last Easter, must lay over for another time.

Very few carte blanche orders are given nowadays, but Madame and Miss call at your store and pump you dry of ideas for nothing; at best they will ask you to furnish designs and estimates, and these are the rocks on which your bark of hope is liable to get wrecked. The getting of an order these times, especially where there is much rivalry, is cause for even more anxiety than the filling of it, and many times the failure to land one is due to either stiff-necked independence or lack of diplomacy. There need be very little "bell-pulling" about wedding orders; a good reputation, artistic and otherwise, is the first care, and how to grasp the situation the next.

Whenever we are asked to furnish an estimate we send two—one cheap and the other fairly high; and we never fail to get the high one. The sending of two estimates is absolutely necessary in these days of keen competition, one to meet the "Cheap John," the florist whose only apparent mission on earth seems to be to undersell all others, and the other to enable you to give satisfaction to all concerned. Now in giving an estimate one needs to be "up" on the values, appropriateness and availability of materials, and no one is justified in pleading ignorance of these today. The time has come—it may be general soon in the large cities—when people expect sketches with their estimates. One house in New York furnishes them now with a success which justifies a more general adoption. Many, perhaps the great majority of people, don't know what they want until they see it; try to supply their wants.

If a bride-to-be is in the habit of visiting your store and you hope to get the wedding order, endeavor to have not only her favorite flower, but some specially choice or novel arrangement always on the counter; don't feel it incumbent on you to present her with flowers every time she comes in, for it is only "cheap people" who care to be under any obligations. Many accept flowers gratis from the florist because they are too well bred to hurt feelings; if you want to give flowers away, put a bunch of something choice in with their order, or better still, execute their order first class. That will create a better impression than giving them a bunch of violets and charging them two dollars for the one they order.

As to materials for wedding decorations, we know many of our readers are living in places where there is a great abundance of choice evergreen stuff and outdoor blossoms at present. Northern

florists envy them their chances for artistic creations, but not their financial recompense. Here in the cold latitudes we must look to the greenhouse for the majority of our material, getting only from the South that which furnishes the background of our work. The plant and cut flower markets here are in such a condition that none are in justified (except in very bad cases) in doing scrupulous work; it is a matter of selection rather than price.

It is hard to convince some that many times an artistic spray in the center of a wall produces a better effect than the entire wall being covered. Application is all in all very often. The romantically sentimental is a most essential element at the wedding decoration, and no matter how cynical or bitter your nature, let your work impart some joy; have it illustrate some of the great beauties of that which makes life worth the while. Old-time methods, designs and ideas no longer obtrude upon the

manner of using it at all, but to the content of the work. Sometimes a bunch of a one-colored Japanese vase makes a hit. The use of flowering plants such as azaleas, hydrangeas, lilies, geraniums, for weddings is so much on the increase that growers find it wise to have a supply right up to the end of June. A great mistake is made in using small, insignificant flowers in the church, whatever you do use big showy blossoms concentrate them. A decoration is considerable of its value if only seen a few feet from the altar, and the majority of the people are don't see them and the bridal party are too much occupied to examine your work. For this reason, too, it is a mistake to concentrate all one's endeavor on the altar; the body and entrance to the church deserve more consideration than is usually given.

Then, where it is possible, and it is so in nearly every case, the center aisle should be reserved for the bridal party; in this way it can be made a grand feature. An azalea can be fastened on the end of each pew; have them all one color—any variety will do; trim the rest of the ends of the pews with greens and a garland and pendant of flowers of a contrasting color. No ribbons should be used. The idea to be brought out is to have the bridal party walk down an avenue of flowers. Use a white or light green crash carpet on the floor and scatter a few short pink or red roses on it. Have a floral swinging gate at the en-

Easter Plant Arrangements. No. 1.

progress of today, not that we see much newness; the progress lies more in the way of better work, and particularly in the using of choicer material. Thus we see a greater demand for spring blossoms, such as almond, peach, Japan quince, the dentzias, spiraea, forsythia, magnolias, "red bud," and the host of beautiful flowering shrubs so easily brought into flower. These are arranged in arbors or avenues, or arches, or manufactured into trees, care being taken to have each by itself. Often the mere suggestion of the use of such blossoms may get you the order.

and don't arrange the flowers higher than one foot above the woodwork. Be careful not to have stems, wire, thorns or such things protrude in a way dangerous to dresses. Floral arches should never appear cheaply done; if the price is small use plenty of greens and cluster your flowers where they will show most.

The altar or communion rail is another important point, and the flowers put there should be high enough to be seen from all over the church. Rig up a temporary shelf, cover it with a white cloth to hang about a foot in front, over this a delicate tracery of vines and roses,

suggesting the natural color through hedge-like rows of pink or white, those behind. The old system of having rounded flowering plants is passé, and the new shows off much better. Here the pots and use some sort of cloth or frame that will bring out the color to better advantage.

We will continue the subject with illustrations next week. **YVKA.**

EASTER PLANT ARRANGEMENTS.

In this week's issue we present five arrangements from photographs of Easter plant arrangements seen this Easter at the establishment of Mr. C. A. Samuelson, Chicago.

No. 1 is a jardiniere 18 by 8 inches, filled with Clothilde Souper and American Beauty roses, nine plants in all. Color of ribbon, a pleasing shade of green. The selling price of this arrangement was \$8.00.

No. 2 is a birch bark basket, 21 by 10 inches, handle 31 inches high. It is filled with nine plants of Clothilde Souper rose, a little asparagus added, and dressed with pink ribbon to match the

BEAUTY CUTTINGS.

Can you tell me why my Beauty cuttings turn yellow after they have been in the sand about three weeks and are calloused? My stock is in splendid shape and the foliage is the deepest green in color when the cuttings are put in the sand. **INQUIRER.**

It is as much a puzzle to me as it seems to be to Inquirer. We experience the same trouble just now, though we feel sure we treat our cuttings the same as before. We have had some very warm and windy days that we thought might have had some effect on the cuttings.

Yet I am inclined to think the principal cause may be in the wood itself. Cuttings from rank growing plants seem more inclined to rot in this way than those from sturdy plants that have had the full sun. Cuttings made in fall and January generally do well. They naturally have the best chance, as far as temperature is concerned, but aside from this I believe the condition of the wood has a great deal to do with it.

M. STAUCH.

summer bloomers which are planted in solid beds will from now on outclass Brides and Maids on benches. It would be well to consider whether it would not be wise to throw out some of the houses or benches and plant in young stock. This would give the young plants a good start and put us in a position to commence cutting some from the young stock by the time the last house is thrown out.

Early Planting.

We are now planting one house of each of the leading varieties, though we feel sure the old roses would still pay well till after Decoration Day, but we know that the early fall trade will much more than offset the present loss. High grade flowers will always bring a good price, but you cannot have good long-stemmed flowers early in the season if planting is deferred too long.

M. STAUCH.

CARNATION TROUBLES.

The varieties of carnations that I have are Flora Hill, White Cloud, Jubilee, Scott and Daybreak. Until February the Flora Hill bloomed freely and with nice blossoms, but since that time they grow to grass (I think you call it). They look very thrifty, but no flowers to speak of. I send you samples of it, also of the Scott. You notice they are sprouting all along the stalk and send out too many buds. The Scott blooms quite freely right along, but as you will also notice the stalk is full of young sprouts. The Jubilee and Daybreak seem to be all right, only at times the blossoms are smaller.

They were planted in rich black soil, with one-third of well-rotted manure. During winter they received two mulches of well-rotted manure, the first cow and the second cow and hog mixed, and two coats of slaked lime, as directed in your journal. I kept the ground loose, and kept the temperature until February to an average of 55 degrees at night, since then from 48 to 50. I have used liquid manure only once, last week. They grow as follows: White Cloud, 2-10 high; Flora Hill, no blossoms; Jubilee, 2-5; Scott, 2-10; Daybreak, 2-1. **L. A. G.**

The sample shoots of carnations came in good order, and they show that there is nothing seriously wrong with the health of Mr. G.'s carnations. The small blooms are due to negligence in disbudding and the F. Hills failing to bloom is likely caused by the changing of the temperature.

You should at all times remove all the buds except one bud to each flowering stem, and usually the large center bud is the best one to have, but if it is injured in some way, one of the side buds will do almost as well if it is taken when quite small. Remove the buds and shoots from as much of the stem as you expect to cut with the bloom and that should be low enough to keep the plant compact. It will help to keep the succeeding growth upright, and the shoots from the main body of the plant will give better satisfaction than those starting half way up the stem.

Mr. G. made a mistake when he reduced the temperature to 50 in February, after having kept it up to 55 degrees up to that time. White Cloud, Jubilee and Daybreak were not affected very much by the change, because they enjoy a cool temperature, about 50 degrees, but

Easter Plant Arrangements. No. 2.

color of the roses. It was arranged to sell at \$10.00.

No. 3 is a birch bark jardiniere, 16 by 6 by 6 inches, filled with Primula obconica and cyclamens, the sash being a pale lavender to match the primula flowers. It contains eighteen plants and was arranged to sell at \$7.00.

No. 4 is a green braided jardiniere, 21 by 8 by 5 inches, filled with lilies and Primula obconica. The sash is open work lavender ribbon. It was arranged to sell at \$12.00.

No. 5 is a green braid basket, 13 by 12 inches, with a sash of green ribbon, and is filled with five lily plants, a few cut stems being added to give fullness. It was arranged to sell at \$10.00.

AN EMPLOYEES' ASSOCIATION.

An Employes' Association is what we need. Keep the ball rolling! **M. R. M.**

ROSE NOTES.

The Young Plants.

The clearing out of the Easter plants will have given most growers sufficient space to work up their young rose stock. This important matter should always receive our closest attention, but on most places every bit of space is so crowded before Easter that it seems almost impossible to give their young rose plants sufficient room. Do not defer giving the young plants every possible chance to make a healthy and sturdy growth. June, our main planting season, will soon be here, and it pays to get the plants benching early. Two months' growth during the summer are worth twice as much as in the fall.

Summer Bloomers.

Kaiserin, La France and other good

Easter Plant Arrangements. No. 3.

Flora Hill does best in 55 degrees, and changing from that to 48 degrees would naturally retard the growth a good deal when they were accustomed to the higher temperature.

If the shoot sent is a fair sample the Flora Hills are just starting to throw up flowering shoots, and will be in crop about the latter part of May. Raising the temperature to 55 degrees will hasten the growth somewhat, and at the same time there is no danger of injuring the other varieties, now that we have a good deal of bright, sunny weather. The growth is very fair, judging from Mr. G.'s figures.

In preparing the soil for next season's planting I would advise using less manure, one-fifth of manure is sufficient. We prefer composting our soil the fall before we want to use it, but if it is composted at once there is yet time for it to get into good shape by next fall. Use a good heavy loam which has a heavy sod growing on it; soil that will grow good sod will grow good carnations as a rule. If it is to lay piled up six months or more you can have the sod cut only a few inches deep, but if it is to lay only three or four months you better take a good deal of soil with it to help rot the sod. If the soil is rather light mix in cow manure, but if it is heavy, well-rotted stable manure will do very well. Carnations do not like a rough, lumpy soil, so it should be well-rotted and pulverized before using. But do not get over anxious and begin before the ground is in good condition. Soil that is handled in a wet state will never grow as good stock as that which is handled at the proper time. It will always remain stiff, and when it dries out it will bake hard like stones. A. F. J. BAUR.

BUFFALO HOTELS.

The Buffalo Florists' Club have undertaken to arrange for the accommodation of all visitors who expect to attend the convention of the S. A. F. in Buffalo.

While it is true that hotel rates will be higher than usual, there are any number of apartment houses that have been fitted out for the accommodation

of Pan-American visitors; also private houses in the residence portion of the city, where rooms can be had for \$1 and up for each person, and in many breakfast will be served if desired, while other places will give all meals, the latter not so plentiful.

The hotel committee have a list of houses and hotels with the rates, and any person or persons wishing to engage rooms can have same secured in advance by addressing the chairman of the committee, W. A. Adams, 479 Main street, Buffalo, N. Y., stating whether they want accommodations at hotel, apartment or private house, with or without breakfast, and the number of persons desiring accommodations together. It will be necessary to inform the committee early, as they have the refusal of several apartments for the week, where from one hundred to one hundred and fifty can be accommodated in one place.

It will be unnecessary to communicate with W. J. Stewart, secretary of the S. A. F., as the executive committee look to the Buffalo Club to accommodate the visitors, which the hotel committee are willing to do, providing they are notified in time.

Street car facilities are excellent, the restaurants plentiful and rates reasonable. No one will be overcharged at any place, and with the above desirable apartments and private houses every one will be taken care of if they notify the committee in time.

THE COMMITTEE.

THE PAN-AMERICAN.

Carnation Show.

The special exhibitions of flowers at the Pan-American Exposition at Buffalo begin with an exhibition of carnations May 1 to 8 inclusive. These exhibitions will be held in the Horticulture building and the rules and regulations are as follows:

All sufficiently meritorious displays will receive a reward. The first will be a diploma, the next a bronze medal, the next a silver medal, and the highest a gold medal.

Suitable vases will be furnished by the exposition management and exhibits will be prop-

erly arranged and exhibited in a suitable and commodious manner. The exhibits should be placed in the building by the exhibitors on or before May 1, 1904, and the building will be open to the public on May 1, 1904. The exhibits should be placed in the building by the exhibitors on or before May 1, 1904, and the building will be open to the public on May 1, 1904.

The classes for the carnations show follow:

- Class 1. Vase of 50 flowers, one color.
 - Class 2. Vase of 50 flowers, multi-colored.
 - Class 3. Vase of 50 flowers, same color, same variety.
 - Class 4. Vase of 50 flowers, same variety, same color, same variety.
 - Class 5. Vase of 50 flowers, same variety, same color, same variety.
 - Class 6. Vase of 50 flowers, same variety, same color, same variety.
 - Class 7. Vase of 50 flowers, same variety, same color, same variety.
 - Class 8. Vase of 50 flowers, same variety, same color, same variety.
 - Class 9. Vase of 100 flowers, and 100 flowers, arranged for effect.
 - Class 10. Vase of 100 flowers, and 100 flowers, arranged for effect.
- Exhibitors must be received by superintendent not later than April 27th.
- Exhibits must be in place not later than April 27th, opening day.
- Exhibits in one class may not be considered as competing for medals in other classes.

Other special exhibitions to be held during the summer are: Tender roses, May 21 to 25 inclusive; Peonies, May 28 to June 7; Hardy roses, June 18 to 28; Sweet Peas, July 23 to August 2; Gladioli, August 6 to 17; Asters, August 27 to September 7; Dahlias, September 17 to 27; Chrysanthemums, October 22 to 31.

A pamphlet containing the classes for each of these special exhibitions has been issued and copies may be had on application to William Scott, assistant superintendent in charge of horticulture, Pan-American Exposition, Buffalo, N. Y.

A NATIONAL FLORISTS' AND GARDENERS' UNION.

Editor Florists' Review: Having read the several letters appearing in your paper on the above subject, I think the florists and gardeners of this great country should feel ashamed of not having formed such an association before.

I would include both the commercial and private men, foremen, head gardeners, florists, clerks in stores and all assistants.

Let us now take the iron while it is hot. I call upon those who are not afraid to come forward at once in every city and town, and let us know who you are and where to find you.

If every first-class florist and gardener, etc., will do this at once, and call a local meeting amongst themselves, appoint a representative and delve into his pocket at the rate of 25 cents each (and throw jealousy to the winds), he can be represented in Buffalo next August and such a union formed, and he can then be on equal grounds with every other professional man in this country. At present we are on a lower standard than many a common laborer in this respect.

I would suggest that where florists and gardeners, etc., are not numerous enough in one city or town that these cities and towns work together and send one good delegate to represent them.

For instance, in my own locality I would suggest the cities and towns of Lowell, Lawrence, Haverhill, Andover, Nashua and Manchester send one delegate between them.

Now get together, men, and talk this

matter over, as we are, and as at present, being gradually increasing our profession, our wages and the price of our productions.

We must have a different society, and the first year of the new century is the time to form it, and the City of Buffalo

as good a central meeting place as we can find, besides having the advantage and help there which we shall surely get from the Society of American Florists.

Up and at it!

W. L. PALMER.

MISCELLANEOUS SEASONABLE HINTS.

Bedding Plants.

There are few weeks in the year busier than those before us just now, for everything used in the flower garden wants its last shift so as to be ready for bedding out, which varies in different latitudes. With us plants that are ready by a slight frost are not safe outside before the 25th of May. We often risk geraniums by the 15th and many seasons have done well by so doing, and again have seen them cut down black on the 20th. Coleus, alternanthera and cannas we never put out till the last few days of May. But this is no guide to those who live in a more temperate clime.

At the risk of repeating what I have perhaps written of lately I propose to tell you now just what I would consider a good shape in which to have your stock for spring sales. It would be next to impossible to mention everything you grow and at the same time I don't expect that many of my readers grow everything I have spoken of, but unfortunately there is yet a lot of us whose peculiar line of business demands us to grow or supply most everything for the flower garden from a carnation to a cactus-fern. Never has the need of the application in our business of the principle of division of labor more impressed itself on me than the last few days. And it is coming, but it has not yet reached us all, and so we plod along.

I would like to find just now all the hardy annuals such as asters, stock and phlox transplanted an inch or so apart in flats and put on a dry bottom in a sunny position in a cold-frame with the means of covering the sash on cold nights. The cannas in 4-in. pots in a bright, warm house where on warm days they can have plenty of ventilation. The caladiums in 5-in. pots in the same situation. Alternanthera in 2-in. pots or flats in a mild hot-bed, where they will grow like the proverbial weed and can be hardened off later by the removal of the sash.

The zonal geraniums that were propagated last September and October are in 4-in. pots and on benches in the lightest houses; no shade over them, but if you could possibly put two or three inches of plunging material between the pots it will save you labor in watering and keep the plants a better color. With us our zonals are fast putting up their flower trusses and we can use the flowers, and the plants are all the better without the flowers till near bedding time. The zonals that you propagated in February should now be in 3 or 3 1/2-in. pots and will make good bedding plants by the end of May. You should have a good stock of *Salvia splendens* of the dwarf early flowering variety. The *salvia* is a plant that you do not want to have too early and

pinched for pot room or they are very liable to get covered with red spider. So small plants now shifted into 3 and 4-inch will make the right size plants by selling time. Every year there is more demand for these common but showy plants.

We use a large lot of vincas for vases. Propagated in the fall they should now be growing in 3-in. pots and by the end of next month they will be the right size. You should also have a large lot of trailing abutilon. Its variegated foliage makes it very desirable for window boxes. For both these plants and many others we have to find a place along the edges of benches so they can grow out. If stood together on a bench they soon spoil.

You should have a big lot of sweet alyssum just shifted into 3-in. pots and plunged in a mild hot-bed. We have never had enough of them. There should be a large stock of lemon verbenas. Plants about now shifted into 3-in. and put into the hot-bed will make splendid bushy little plants by bedding time. *Ageratum* is such a rank growing plant that we keep them in the benches. This is another plant you don't want to have too early. Plants even propagated now and later given a 3-in. pot will make splendid bedding plants. Tuberous begonias I would like to have now in 3 and 4-in. pots, but only just started. They also will do better in a mild hot-bed than in a greenhouse and, like many other things, can be hardened off.

If you carried over any carnations from last fall in a cold-frame for bedding out for summer bloom, or propagated any very early for the same purpose, it is time they were planted out. Your customers foolishly wait till colous time and then ask for carnations. Sell them and get them planted out as quickly as possible. *Centaurea gymnocarpa* is still used for bedding and more with us as a veranda box plant. We prefer to grow them in the benches in a light house as they get a better color and harder growth than when put into a hot-bed. There is always a good demand for *Colea scandens*. Ours are just shifted from a 2-in. to a 4-in. pot and a slender stake of two feet high put to them. Keep them in a cool, light house and they will be amply large enough.

It is difficult to say how we would like to have colous because we want them in all stages. Just now we are shifting a thousand or two from 2 1/2-in. to a 4-in. and giving them their last pinch. In a warm, bright house where the heat is kept up there will make large plants, with us so useful for vases and veranda boxes. There is no better place than the hot-bed for your main crop of *Verschaffeltii* and Golden Bedder and these two comprise 90 per cent of all the colous you

want. We are now shifting a big lot of these bedding-size from 2 to 3-in. and they will make good, sturdy plants by bedding time.

Though a plant entirely out of the bedding class I would just say that our cyclamen are now in 3-in. pots on a shelf. I know many of you have a strong objection to a shelf, but when crowded they come in very good. Be very careful that they never suffer from extreme dryness, for it does them great harm.

I forgot to mention earlier a very important plant; that is, the ivy geranium. We have lately shifted all ours from a 3 to a 4-inch. We use these very largely. There is no other place for them but a shelf, because they must have room to grow in width and not in height. I have often seen these plants allowed to bloom long before selling time. They are the most profuse bloomers early in the season. Keep the flowers pinched off until the middle of May or it will stunt their growth. The common white pyrethrum, often called Feverfew, is, as you all know about hardy. They should be in a cold-frame. Our fuchsias are now in 4 and 5-in. pots, growing vigorously. Don't neglect tying them (that is, the varieties that need it), and here is a plant that must have some shade.

Heliotrope is another plant that we have in successive batches and often we have them too early and they get rusty and shabby before market time. Thrifty plants in 2-inch pots, if pinched and shifted now, will make the best for bedding. *Lobelia* we have just shifted from a 2 to a 3-inch. They always go on the shelf and we never have too many. Mignonette sown in February should now go into a hot-bed. Three plants in a 3-inch pot make nice plants. Every one should raise these favorites from seed, but they do not, and it is surprising how many are asked for at bedding time.

Nasturtiums of the climbing varieties should be now in 24 or 3-inch pots, and, as I have frequently had occasion to say, they do not want a rich soil. These also we put on the shelf. If very small plants now, they will be plenty large enough by the time you are filling vases.

The great majority of people do not plant out pansies until late in May. This is a big mistake. These we have wintered under glass in a cold-frame are now coming into flower and now is the time we sell them. They do better and you have a month bloom before it is time to put in the permanent summer plants. Get rid of them as soon as possible, for now they command a better price.

I have had very little to say about pelargoniums for a long time for the reason that I am about disgusted with the way they sell. The zonal geranium is so much more satisfactory that they have entirely displaced the show pelargonium. It will soon be their season of blooming. I can only say this about them: never let the fire out in the house they are in. One damp night and the petals will drop, lodge on the leaves and rot them. Continual mild fumigation and plenty of warm fresh air is the secret of growing pelargoniums.

The petunia is a very important plant with us for various purposes. They grow very fast. Our plants have just been potted singly from the flats into 2 1/2-inch pots and stood in the lightest and coolest house we have. In a hot bed they grow altogether too strong. I see at last that the little plant that nobody seemed to know much about, *Pilogyne scavis*, is now being advertised as the

Minnesota vine. It is one of the best of all summer climbers. It will make a dense veil, even surpassing the cedar, and much prettier, I hope you have some. It is a difficult plant to winter, but grows at a tremendous rate toward spring. Cuttings put in now root so quickly that there is plenty of time for them to make as large plants as is desirable.

We are asked every year for 100 or so of ricinus for large tropical beds. Our ricinus have just been shifted into 4 inch pots. We have a number of tuleroses started and they will be shortly shifted into 4-inch pots, and they also go into a hot-bed, where they make much quicker growth than in a greenhouse. We don't grow them for flowering, but our customers want them for their gardens.

Verbenas are still grown, but not to such an extent as they were years ago. We have been raising from seed for a number of years. Seed sown the last of January have made nice plants. We

is a great demand for novelties of superior merit and that is one of the best indicators of a good business season. Geraniums seem to be regaining lost ground and even promise to overthrow the canna somewhat in popularity as a bedding plant; this is perhaps because there has been too many trashy cannas put on the market of late years and the people get tired of the lanky leaved flowerless plants.

The plant market at Canal and West Sts. opened with a bang and the old familiar peddlers' wagons can be seen traversing the streets with their loads of pansies and soft wooded flowering plants. By the way, pansies are in greater demand than ever; window boxes and vases filled with them are appearing everywhere.

The Market.

The only melancholy note to be heard

of plants to be sold in connection with the New York Botanical Society at the museum in Bronx Park, May 7 and 9. Good prizes are offered and all the local societies are to be invited. It is expected that this will be a great field day, it being the first exhibition to be held at the Botanical Gardens. Particular favor can be had from L. Barron, 139 Liberty St.

Dutch nursery stock occupies the principal portion of the auction tables the 3 days and very good prices are the rule.

There will be numerous changes among the retailers this year. James H. Carroll, with Thorley ever since he came on Broadway, is now manager for Fleishmann, and Jim Koster has left. Alexander Mandorff gives up his store at Third and Broadway, and the business to be consolidated with that of his brother, Joseph Fleishmann, at the Hoffman House. Prover Bros. move across the street. We hear Dards and Stebrecht & Son intend moving to more prominent locations on Fifth avenue.

There promises to be a revolution in the mode of selling cut flowers in this city. The large growers will, it is said, shortly organize and open a market to retail their own stock. J. I. D.

WASHINGTON.

Easter Trade.

For a whole week before Easter the sun was hidden behind the clouds, and Saturday morning it began to rain. Of course prices came down with the rain, but about noon the sun shone beautifully and brought the buyers out in throngs. Prices for all stock were much more reasonable than in former years, but the supply was much greater and hence better receipts. In spite of the weather, the business in general was at least 25 per cent greater than last year.

Azaleas in smaller sizes sold well. Quite a few Ramblers could be found on the shelf. The demand for Ramblers for an Easter plant is growing less. Lilies sold on sight; still there were plenty to go around, but none left. Pans of tulips and hyacinths, such as 50 cent to \$1 sizes, sold well. Spiraea sold fairly well, but some of the boys had entirely too many. Rhododendrons, genistas and deutzias held a back seat, although some very fine plants were to be seen. Hydrangeas sold well, but the greater demand was for \$1 to \$1.50 sizes. Violets in 6-inch pans sold readily for 50 to 75 cents. Hyacinths in pans were cleaned up early in the day. The supply was far short for this popular Easter plant. Daffodils came in by the tens of thousands from the south, in competition with ours, which was a blow, and sold for \$5 to \$6 per 1,000. Consequently they were sold and ours held over for the dump, as well as violets, which were entirely too plentiful, bringing \$2 to \$3 per 1,000, but home-grown violets were away short and \$5 to \$7 per 1,000. In the way of general cut flowers there was no scarcity.

Gude Bros. supplied the market with fancy Beauties and cleaned out at a \$6 to \$9 per dozen. There was a general scarcity of short Beauties. Teas of all kinds were picked up very readily at 12 1/2 to 15 cents.

The American Rose Company held the town on lilies. Their supply was something enormous and sold at \$2 per doz. Their delivery wagons were going all

Easter Plant Arrangements. No. 4.

have stopped them once and now they are in a hot-bed, but the danger of this method is that they root through into the soil and you must be careful in a week or two to lift them up an inch or so, enough to break off the root. If you do not, they will make such roots in the plunging material that they will make all growth and no flower. Now, what I have written above is nearly all for summer bedding plants, and that, I think, is enough for one week.

WILLIAM SCOTT.

NEW YORK.

The Spring Season.

The season in the vicinity of New York is nearly two weeks behind. Vegetation seems moving very slowly; not that it has been an over severe or long winter but cold wet rains seem to have retarded everything. However, the seedsmen, nurserymen and general plantsmen, are extremely busy and the prospects seem very bright for an extraordinarily prosperous spring. There

just now comes from the ice boxes of the wholesale florists here; an undesirable state of affairs exists. When roses, good ones, too, can be bought at from \$1.00 to \$2.00 per 100 up at this time of the year it is useless to use up type in further description; whatever is done let it be in sympathy.

The Easter plant trade in New York was enormous. Lilies on the average were poor; the most was made by those who made up their stock. The retailers had considerable stock left on hand; much of it, however, came in handy for complimentary and other sorts of jobs.

Various Items.

At the meeting of the horticultural section of the American Institute last Wednesday there were but very few flowers on exhibition. Much good work was accomplished by those in attendance. H. W. Gibbons read a most instructive paper on greenhouse building.

The Horticultural Society of New York met the same afternoon and arranged for an exhibition of cut flowers

night and nearly all day. The finest Easter this year. From new rose, Ivy, went like a hot cake.

J. R. Freeman had a very good everything but lilies. 17,000—200 kinds, and line ones at that—500,000 and at good prices.

Z. D. Blackstone's most aggressive hower of plants, and well arranged too, but the next day it looked as though he had passed through his own "Old line," he says.

George Schaefer had a handsome effort in made up plants and did a much greater business than he expected.

O. A. C. Oehmler did a fine business. Two days after Easter he broke out in his place of business, and completely burned him out. He has been in business only a short time and has the sympathy of the craft. Fortunately he was insured for enough to completely cover his loss.

Elmer Mayberry, of E. W. Bolgiano's, says: "We had to close up early Sunday—completely sold out. Did the best we ever did."

E. E. Lacy, of the Grand Flower Store did finely; sold out everything.

The display of J. H. Small & Sons was something rich in the way of fancy made-up plants. From the general appearance the next day they did a great business.

J. L. Looze says: "We were prepared for the rush and got it. Yes, sir; we had plenty of everything and everything went."

Business since Easter has been fairly good. Lilies are a great glut. Too many; they will not sell; can't give them away. Daffodils are the same way.

F. H. KRAMER.

BUFFALO.

The past week we have had most charming weather and hyacinth and tulip beds would take a shower.

From fuller reports of Easter it appears that everyone did a larger business than last. That was to be expected here because we have many more people in the city than there was a year ago and everybody is feeling better off. How much the increase was I can't say, but I should think at least 20 per cent. I notice quite a few longanvillas left over—nice flowered plants. People are not quite educated up to it yet. We found that out two or three years ago. And there were also all the Ramblers in town that were necessary.

Take it all together stuff was well cleaned up. There was not such a great demand for roses. Violets were the favorites. It was told that S. A. Anderson sold 20,000, and supposing that Mr. S. took a long breath when he made the statement, and that 10 per cent was added by the one who told it to me, it was yet a large quantity.

Henry A. Dreer has Mr. Parsons on the ground fixing up his exhibit in the conservatory at the Pan-American, and Mr. Julius Heinrich is looking after the interests of Peter Henderson & Co., and converting an expanse of clay into a small paradise.

Mr. Benj. Slug Shot Hammond was here and others, but my time is up.

Pan-American Progress.

April in Buffalo, although it cannot be called a cold month, is very uncertain, and unfortunately this April has been so far a typical one and a little more so.

A bright dry April would be a great blessing to the progress of work on the grounds, and that, of course, is of more consequence than all the agricultural and horticultural industries of this broad land, or we think so. The shrubs and herbaceous plants, with few exceptions, have come through the winter in good shape and the grass seeded last year is perfect and slowly assuming the well-known tints which gladden the eye. The thousands of hyacinths, tulips, and narcissi are showing well above the ground, and these in the exhibit department are bound to make the music garden a brilliant expanse of color during the month of May. The long borders on each side of the Grand Basin, containing a quarter of a million bulbs, are also showing up finely.

I will pause here to say that when every detail is finished and these beds are gay with summer flowers and fountains with the Electric Tower filling the sky to the north with the exquisitely tinted Music, Ethnology, Liberal Arts and Machinery Buildings to your right and left, the grand group of government buildings rounding off the eastern view and the horticultural group the western, it will be a scene, a dream, never before equaled. The aquatic basins in the Court of Fountains in front of the Machinery, and the Court of Cypress in front of the Liberal Arts Building, are about complete. The one destined for the Victoria will be carefully and thoroughly heated. The exotic nymphæas also for this basin are being grown in the conservatories, and are already splendid plants and growing at a prodigious rate. Many exhibits of ferns and shrubs will be here the moment the ground is sufficiently dry.

The landscape department is still propagating with all possible speed and many hundreds of such are now covering hot beds that contain hundreds of thousands of bedding plants to be used in the courts, at the base of many of the buildings, in front of the Pergolas and in every available spot where color of flower and foliage can further embellish.

We have often had occasion to mention, in this White City, and the charm and delight of the coloring of the buildings is beyond my descriptive powers. Amherst street, the only paved street that crossed the acquired ground, would be no longer recognized by the oldest inhabitant. On each side of it magnificent palaces; crossed by canals; in long stretches, planked and paved ten feet above its old level; bordered by tall Lombardy poplars, and where the old street is still left at its original grade, covered with a foot of soil which will be a tropical garden profusely dotted with splendid statuary.

Within a few days the fence dividing the acquired ground from Delaware Park has been removed. Buffalo people know the effect of this, but the stranger whose attention was not drawn to it would have no idea of the enhancement to the whole Exposition. Here are 150 acres of a true park whose landscape features are unsurpassed. Although electric fountains, electric launches and innumerable lights throughout the grounds will make it a fairy scene on summer evenings, great and beautiful as is the whole design of the Pan-American, the transition from the artificial to the natural as you enter the park is delightful and a feature that no previous exposition has had the good fortune to possess.

The schedule of the classes for the se-

ries of flower shows which will be held throughout the summer is being issued in very tasty pamphlet form, and all those who are interested in these exhibitions who do not receive a copy will be gladly furnished the same by forwarding their request to me at the Horticulture Building, Pan-American Exposition grounds.

WILLIAM SCOTT.

PITTSBURG.

Club Meeting.

On Thursday, the 11th inst., the Pittsburgh and Allegheny Florists' and Gardeners' Club held its regular monthly meeting at the rooms of the Pittsburgh Cut Flower Co., 504 Liberty street. There was a good attendance and a spirited meeting. There are seventy eight members in good standing.

Hyacinths.

There was an exhibition of hyacinths from Schenley Park and of new varieties from Mr. C. W. Ward, of Queens, L. I. The hyacinths were representatives of a large collection donated by Henry A. Dreer, of Philadelphia, to the park last fall. The best yellow was Ida. La Grandesse was voted the finest white, and L'Innocence and Queen Victoria found much favor. Alba Superbissima while a good white was disappointed because of its tendency to green tips. Baroness Van Thuyll, a long time stand-by white, was repudiated because of its tendency to "spit" its flower spikes, and Madame Vander Hoop isn't innocent in this line. King of the Blues was the deepest and finest of its color, and it makes big spikes. Charles Dickens came next and is easy to grow. Grand Lilas and Queen of the Blues gave most pleasure among the paler blues.

General Pelissier was the finest of the deep reds, but it doesn't hold its color long. Lord McCauley and Gertrude were fine among the deep pinks, and Charles Dickens the biggest and heaviest among the pinks; Gigantea, a fall flower and lovely pink, was much esteemed, and because of their pretty pink shades some leaned heavily to Fabiola and Norma, but these were deficient in size. The best of the doubles were Grootvoort, pink, and La Tour d'Auvergne, white, but doubles were not in favor.

Evidently the Pittsburgh florists are soring on hyacinths. They claim there isn't enough money in them. They get only \$1 to \$1.25 a dozen for nice plants in four-inch pots in bloom, and after paying for bulbs, pots, etc., there is so little profit in the venture that several expressed themselves emphatically against growing them again. They make more money from other flowers.

Carnations.

Mr. Ward's carnations were beauties and consisted of Governor Roosevelt and Harry Penn, crimson, and Viola Allen, Golden Beauty and others of fancy types. Every florist present was a good Republican for once and wore Teddy in the lapel of his coat, even John Bader, a pronounced Democrat, declared the carnation was all right anyway and asked for another bloom. Mr. Reineman believes it is the best crimson in the market. Gus Ludwig said the color is used very little in Pittsburgh because there is never enough of it at one time in the market for a full decoration. Mr. Blind spoke well of it, as he saw it grown in the east. But Harry Penn captured the

Easter Plant Arrangements. No. 5.

meeting. It isn't nearly so dark as Roosevelt and it is suffused with a bright scarlet glow that gives it good life, and more than that, it is exceedingly fragrant. It has also a good, stiff, long stem and a well knit, finely formed flower. The fancy or variegated carnations were very beautiful, but the Pittsburg florists don't enthrall them because there isn't much market demand for them.

Notes.

All expressed satisfaction with their Easter trade. Lilies in pots were unequal to the demand. Mme. Van der Cruyssen azaleas sold like hot cakes. Simon Mardner was next in favor; then Vervaneema as a variegated flower and Niobe as a white. But there were some whites left. Mme. Van der Langenhoff came in for some abuse because it drops its buds and leaves when being imported. Crimson Rambler roses received considerable commendation, but the home-grown stock flowered better than what was bought in the east and brought hither for forcing.

Henry H. Negley, Alexander Negley and Dr. Shaffer, gentlemen who have fine orchid collections in Pittsburg, were present, and Mr. H. H. Negley, just returned from an extended trip through Florida, gave an interesting talk about the gardens in the Flowery state and his interest and pleasures in the Everglades, mangrove swamps and along the river banks in search of wild orchids. He was loud in praise of the "palm" orchid (*Cyrtomium punctatum*) and its big panicle spikes of brown and yellow flowers. He exhibited this at the meeting. But he cautioned the members against going to Florida to start in the florist business. His advice was, "stay here and make your money and go to Florida to spend it." P. A.

LEAVENWORTH, KAN.—R. C. Hinz is building 10,000 feet of glass for the production of cut flowers.

CHICAGO.

The Market.

The usual after Easter conditions prevail, especially as regards roses, lilies and bulbous flowers. Of roses there is practically a glut and prices are difficult to quote. On really first class shipping grade the price is about \$5.00 to \$6.00 per 100, but the great bulk of good stock is sold at from \$2.00 to \$4.00 and the poor stuff runs down to \$5.00 per 1,000. There is a big supply of late lilies and quotations are as variable as the weather. One dealer asks \$8.00 to \$10.00 for the best, another \$6.00 to \$7.00, another \$4.00 to \$6.00, and still another asks "what will you give?" Of course the quality counts all through these figures but one can buy really good lilies at \$4.00 to \$6.00 and this is probably a fair average.

Carnations are another story altogether. Of the best grades there are none too many and good fancy bring \$3.00 readily while a few specials go as high as \$4.00 and \$5.00. Good ordinaries bring \$1.50 to \$2.50, with Scott and that class at \$1.00. A few Lawson and Red Bradi are the only ones in the \$5.00 class; Crane, Marquis, White Cloud, Bradi and Nugget are in the \$3.00 to \$4.00 class and the lower grades of these and other sorts make up the cheaper ones.

Beauties are holding up pretty well at \$3.00 a dozen for the best, and then \$2.00, \$1.50, \$1.00 and 75 cents, with the medium lengths in greatest demand.

The supply of greenhouse grown bulbous flowers is slackening a little and there is a trifle better tone in the market for them, though prices are still low. The outdoor grown stock from southern points is arriving more freely but of course this is in a class by itself.

There are lots of callas and prices are low, but there seems to be a shortage of "green goods" such as smilax, asparagus and adiantum.

Local demand is being kept fairly briskly by the Spring Trade kept. The 1901, 1902, for the season and on the other hand is dependent in a large measure on the season.

Various Items.

"And now the Greeks are organizing a Union." It is currently reported that each member pays a fee of \$5.00 and that when the "Union" declares a boycott against any of the wholesalers any member caught buying of him forfeits the five bucks. When any wholesaler orders a Greek to "quit wearing those flowers out with your hands," or vehemently informs him: "No, you can't have 'em for \$3.00 a thousand; get out of here," he will be solemnly boycotted by The Amalgamated Association of Allied Chicago Growers and he will then be up against the real thing. Charley Probst is the treasurer and holds the forfeits. We have not yet heard what the forfeits will be expended for when forfeited but would suggest a good dinner and a box of cigars to the boycotted wholesaler. May the forfeits be numerous if this carries and the wholesalers will count us in on the side.

Mr. Challenge Ventilator Evans of Indiana, was a recent visitor.

Geo. W. Scott, the West Madison St. florist, buried his sister last Tuesday.

Geo. Piegras has taken deskwork with Bentley & Co. while winding up his business affairs.

Mr. C. M. Dickinson, of E. H. Hunt's, says the Greek's Union is a good thing. He hopes for the honor of being the first to be boycotted so they will keep away from his place.

McKellar & Winterson are still doing a big business in general supplies and find no let up in trade.

The crocuses, scillas and snowdrops are in bloom at Lincoln Park and the hyacinths are pushing up their flower spikes.

There is talk of an elaborate floral parade at the time of the visit of President McKinley to the city early in June next. The officials of the National Business League, of which A. A. Burnham is secretary, is pushing the project.

The Geo. Wittbold Co. arranged a decoration for the Holland Society at the Grand Pacific Hotel this week of which a feature was an old Dutch windmill twelve feet high. Though flowers were freely used elsewhere the mill was covered merely with green sheet moss.

Mr. Flint Kennicott will soon make his usual spring move to his country place at "The Grove." Mr. Kennicott's father settled there in 1837 when Chicago was a village and was the pioneer nurseryman in this section.

"The Paecny, its place in the cut flower market and the best varieties," is the subject for the Florists' Club's regular meeting tomorrow (Friday) evening and the subject is to be treated by Chas. Klehm and Flint Kennicott.

RICHMOND, VA.

The Easter trade taken altogether was an improvement over last year, notwithstanding a rainy Saturday and backward weather. The plant trade seemed to suffer some, but all grades of the best material went off well and brought good prices. Easter lilies were not over plentiful and all the good stock went early. Hyacinths were in good supply and sold readily, but some

from 100 cents. The quantity of cut flowers in demand is very small in the present market. All shipments were made in even quantities, one town from Louisiana to each town in all the States. Supplies are good, like so many violets were in the first market.

The stores had good displays and all seem satisfied with results. Hammond and Mann & Brown are noted for the largest plants. The new variety, Harvey, Whitty, Mossburn, Bonomo, Amory and Ely, followed by the market brigade, and last, but not least, the new colored candidate, Forester, who had all the work for "Flemish Jasper" of "De sun do move" fame.

Let the florists keep their eyes on Richmond. The business is certainly moving here and some day not far distant will reach dimensions to surprise some of those who regard the market as small. O.

ST. LOUIS.

The Market.

Since my last report business has decreased and the prices cut to almost nothing. The glut started the early part of the past week, the best of stock being hard to dispose of and there are prospects of the glut continuing during the present week. Stock of all kinds can be bought at buyers' prices. Ferns are selling five stock on the street at any price; 10 cents per dozen for fine carnations and roses just as cheap. Not only are roses selling cheap but all other flowers. Bulb stuff is dead, very little demand for it. Sweet peas are 25 cents per 100; valley and tulips 81 and 82; HARRIS and callas are 810. The growers and wholesalers find fault with the prices obtained for stock and with good reason. There has been entirely too much stock brought to this market for the light demand. The quality of the stock coming in at present is fairly good; in roses, American Beauty has improved recently. Violets are showing the effects of the spring weather and a few warm days will put them out of the market. This is all that can be said of the market this week.

Notes.

Tree planting has been very brisk so far this spring. Mr. C. C. Sanders reports that he is very busy just now planting trees, evergreens and shrubs.

C. Young & Sons Co. report large orders coming in for plants, seeds and bulbs. They expect a large trade this spring.

Mr. Wm. Bouche, the landscape gardener, reports that he is at present at Laughlin's place and is getting it in fine shape. Mr. Laughlin will spare no expense and will have the finest place around St. Louis. Sander's Nursery is furnishing all the plants, trees and shrubs.

According to the reports of the commissioners to the Pan-American Exposition, Mr. Wm. Bouche will have charge of the work for the Missouri exhibit and a better man could not be found to do credit to old Missouri.

Club Meeting.

The April meeting of the Florists' Club last Thursday was very poorly attended only ten members being present, most of the growers being too busy with spring trade. No essays were read, all being excused until the May meeting. The first ten per cent of the World's Fair

subscription was ordered paid. J. J. Benke resigned as chairman of the exhibition committee and Fred Menhardt was appointed to the place by the president. Very little other business was transacted. Next regular meeting in May will be a sweet pea meeting.

Bowling.

The Florists' Bowling Club has held its summer bowling in 1904 in six trips to the Buffalo market. The conditions were good for the first night, but a small brook in the pool for next Monday. The scores were as follows:

	1	2	3	4	5	6	7	8	9	10	P. V.
J. J. Benke	73	76	106	74	67	59	67	67	67	67	67
A. A. Kiehl	72	72	88	77	76	73	73	73	73	73	73
J. W. Kuntz	75	75	75	75	75	75	75	75	75	75	75
John Young	78	74	72	72	72	72	72	72	72	72	72
P. C. Weber	77	77	74	74	74	74	74	74	74	74	74

J. J. Benke.

PHILADELPHIA.

The Market.

Business has fallen off considerably; plants are at a standstill; cut flowers are in long supply—an adopted term—hardly sounds right. Carnations are holding fairly well in price but roses have tumbled; 82.50 a doz, is about as good as you can get for five foot Beauties and Teas are down to 86 and 88 a 100 for the best, with the ascent on the 80.

Violets are nearly over, likewise bulbous flowers. Would to heaven they were entirely over. One shipper alone sent 14,000 southern single daffodils to a commission house on Monday of this week. The stores seem fairly busy; there is a good deal going on still.

Various Items.

Stephen Mortensen has five acres of ground and 15,000 feet of glass at Southampton. To this plant he intends adding 5,000 feet of glass next summer. He grows peas exclusively. His Brides and Maids show great vigor. His young plants grown in narrow houses are in splendid shape.

Jennings Bros. of Olney, who have the reputation of taking very fine rises to uptown stores, are going to tear down and rebuild a number of their houses next summer, using their patent benches and gutters.

Adolph Fahrwald had a very heavy crop of special grade Beauties for Easter. His houses are full of stout canes that have far outgrown the seven foot stakes to which they are tied.

There is an opening in this country for a specialist in araucarias; it is thought that over \$100,000 go abroad annually for this "Christmas tree."

David Anderson of Garretttsford, Delaware county, will plant two 150 foot houses in American Beauties this summer. If he does them as well as Brides and Maids they will be very fine indeed.

Frank Blakeborough, of Clayton, N. J., formerly of Mt. Airy, reports good Easter business. This is only his second year but he is educating the natives to buy flowers and feels much encouraged.

Charles Zimmer, West Collingswood, N. J., reports excellent Easter business. He had some lilies late but there were many others in the same boat.

William J. Moore has put a fine new wagon on the street. Business is surely way up with this bustling commission man.

The April meeting of the club was favored with three splendid papers on the rose by John N. May, Summit, N. J., John H. Taylor, Bayside, Long Island,

and Benjamin Durfee, Washington. These papers are to be sent to Dean Hole, who was elected an honorary member of the club. John Walker was also elected an honorary member.

Tobert Craig has a promising lot of calceolarias well set with buds.

Dean Avard is a likely holding geranium. It is of the Bryant type, flowers large and double, coral pink.

The Floral Exchange are said to have placed many young plants of Queen of Edgely rose in small lots among private gardeners.

Myers & Santman expect to grow Sunrise next season, it is understood, as a side bench rose in some Beauty houses.

It is estimated that the loss to all of us through the rainy Saturday before Easter was not less than \$25,000. This is probably conservative.

John Westcott reports his wholesale Easter trade as ahead of last year, but the retail trade was ruined by the rain. This applies to all our cemetery florists.

William Winder, Haines street near Lemelin pike, has a blue daisy which he thinks will prove useful for cut flowers.

Samuelson of Hatboro, has reappeared. He is said to have been seen at the Hyphen rose show.

Who is Phil? Why Phil. A. Delphia, of course. Phil.

BOSTON.

Trade Conditions.

No more sympathy need be wasted on the Puritanical city of Beams-by-the-Bay. Things have been better since Easter than could be expected considering the weather and other ailments on this page of the almanac. The two weeks' rain held back the blossoms somewhat, as well as the easter-cumers, so that really there was not much of a glut after the very fair demand was supplied. Of course everything was quite closely cropped for Easter which helped materially in keeping goods down to marketable quantities. Violets even tried to be scarce for a few days, pinks not a bit plentiful and nothing in oversupply except large American Beauty roses, of which there never was such a supply forced upon the city. There is the sharpest kind of good natured rivalry between the salesmen of the E. M. Wood Co., Welch Bros., and Mauser, with the assistance of Geo. Sutherland, who has the cut of the Exeter Rose Conservatories.

Like the great and only original American beauties these goods are shy in bloomers especially in cold weather and it is really remarkable that the sunny side of a cold New Hampshire hill can compete with the middle Atlantic states in their growth, even if no one challenges the crop of those hills on the genuine sort. But the Exeter people play a good game with them and their cooler temperature comes in good play during the next two months in keeping up a good crop.

Beauties are now selling at from 81 to 86 per dozen in competition with a fair supply of Jacks and Bruners, Brides and Maids at from 82 to 86 per 100; pinks, 82 to 84 per 100 on good ordinary kinds; violets, 25 to 30 cents; bulb goods, lilies and quite an array of spring material at low prices. But quoted prices are of no value just now. It would take a trombone ten feet long

to play the change— that is, to vary during the next few days. Old and difficult our business conditions mean that any changes in the revenue side does anything else? It is his dead end, we have all "started up" and are in the same

THE EASTER TRADE.

(Continued from p. 1766)

SARASOTA, N. Y.—J. J. Foster reports Easter business as not so good as last year. It rained all day Saturday and Sunday. The wholesale trade was good, there being a large demand for lilies, which were scarce this year, about 60 per cent of the plants being diseased.

PROVIDENCE, R. I.—E. J. Johnston reports Easter trade as very satisfactory. There was an increased demand for azaleas and other flowering plants, bulbous stuff sold well. Short supply of carnations and lilies. Weather very stormy, making it difficult to deliver plants in good order.

OSHKOSH, WIS.—Isaac Miles reports Easter trade as 20 per cent better than last year, with lilies in fair supply and carnations very scarce. An abundance of roses, tulips, valley, forget-me-nots and hyacinths. Plant trade fair with a good supply of azaleas, cinerarias, hydrangeas, ferns and palms.

NEWBURYPORT, MASS.—J. A. Robinson reports that all the florists cleaned out well at Easter, pinks selling at 10 cents each, roses 15 cents and lilies 25 cents per blossom or bud. Churches, stores and private houses were decorated much more than usual and many orders were given florists to decorate graves.

NEW BEDFORD, MASS.—Samuel S. Peckham reports: "Easter trade was very good in spite of the very rainy weather of Saturday; plants selling very well; lilies scarce and high, also carnations; violets very plenty, but sold well at fair prices. There seemed to be less church decorating this year than last."

BELEFON FAINE, OHIO.—Poole & Parlant report Easter sales as exceeding expectations except in HARRISII lilies, which sold poorly. This firm made an elaborate display of plants and flowers Thursday and Friday, which was announced in the papers as a special free display, and it brought out a host of visitors.

ANDERSON, IND.—Stuart & Haugh report: "Easter trade this year was about 12 per cent better than that of 1900. Good demand for both plants and cut flowers, of which the supply was about equal to the demand, excepting in the case of Easter lilies, of which there was a shortage. Prices ruled about the same as last year."

BLOOMINGTON, ILL.—A. Washburn & Son report: "Easter trade as compared with last year shows an increase for flowering plants and also for cut flowers. Easter lily and azalea plants were in good demand and in plentiful supply. Cut flowers, plenty, prices about as last year, and with an increased demand for daffodils, tulips and hyacinths."

HALEIGH, N. C.—H. Steinmetz says that Easter trade was about 25 per cent larger than last year, the principal de-

mand being for cut flowers such as carnations, HARRISII lilies, valley, etc. valley. Pot plants were sold in restricted numbers. It is a long time since the demand for flowers at Easter has been so large during the last five or six years.

ELGIN, ILL.—R. O. Neil reports: "I don't think the demand for plants and cut flowers was any greater this year than last Easter, though I have done a better business myself. About the wholesale price of cut flowers more than doubled the week previous to Easter, the cheap people at least will not pay the price I believe in a reasonable price for plants and flowers at all seasons."

SOUTH BEND, IND.—Aug. F. Beyers reports: "Easter trade was very satisfactory and far ahead of last year. The demand for cut flowers was enormous and that for blooming plants was excellent. Trainor & Rettig did nearly twice as much business as last year. I sold all the cut flowers I had and had a great call for the old calla lily. We are all satisfied in this section."

FALL RIVER, MASS.—C. Warburton reports: "The weather was against a good Easter trade, at least most of the week, but we sold out pretty clean. Violets sold well and there was plenty of roses and carnations and lots of bulbous stock left. Plants sold fairly well. The Japanese cherry was the only novelty, and sold well. Prices were about the same as last year."

ATLANTA, GA.—John A. Lambert reports Easter trade as extremely brisk, with only a moderate increase in plant sales but a notable increase in demand for cut flowers. HARRISII were scarce. Carnations in good demand, with supply only fair. Maids and Brides went at \$1.50 to \$2.00 per dozen. Got better prices this year for bulbous flowers. Made-up baskets, etc., were in good demand at good prices.

NEW ORLEANS, LA.—J. A. Virgin reports: "Cut Easter lilies had the most call for this Easter and prices were good. Next best, Brides; Maids sold out; Golden Gates sold well. Beauties had increased call over last year and stock was fine. Carnations and violets did not sell. Most call in plants was for pot lilies. Fern balls sold well. No call for palms, ferns or spiraea. An increase in cash sales, about 25 per cent. Baskets had very little call."

PASSAIC, N. J.—A. van Leeuwen, Jr., reports: "Easter trade this year was fully up to the expectations, plant sales showing a decided gain over cut flowers, and but for the continual performance of Miss Rain, every florist's shop would have been cleaned out. The Messrs. P. King and Wm. McAllister had very creditable displays, the latter firm having a large annex up town. No special deviation from last year's business and supply well up to demand."

PORTLAND, ORE.—Clark Bros. report: "The Easter trade in this city was probably about 25 per cent above that of last year. The supply of salable stock was inadequate for the demand. Particularly was this so of carnations, which as usual are the great favorite among cut flower buyers in this part of the country. In plants, Easter lilies were the main article, with scarcely enough to

supply a year's supply of 1901 cut flowers. A good supply of cut flowers was also in demand, but the supply was not so good as last year's.

BRIDGE, MO.—L. E. Wright reports: "The Easter business in Bridge was about the same as last year's season. There was a large pot plant sale on Saturday morning and HARRISII lilies, tulips and carnations. In cut flowers, carnations, HARRISII lilies, and roses were mostly called for. Prices of carnations were about 100 per cent. They were not enough to supply the demand, but the supply of the roses, tulips, etc., was good. The carnations were mostly supplied decorated with pots of 1900 carnations, and not good cut flowers.

WESLEYANVILLE, MISS.—E. S. Ward reports: "Trade was good for Easter. Lilies were more flowers in the price 100 per cent over before. The department stores and several fruit stores had a big supply and the florists were well stocked and everything was sold. There must have been nearly double the supply of cut flowers in town that there was last year. Most flowers were of good quality. Carnations and roses were in constant demand, but in plants the lily is what everyone wants; next is the spray, other flowering plants go slow. On the whole trade was very satisfactory."

EMM, PA.—Easter week began very dull, cloudy and cold, with plenty of rain and some snow. Thursday and Friday were busy days, and Saturday there was a rush for potted plants and cut flowers. Carnations and violets were in great demand. Erie florists say that more plants and cut flowers were sold during the few days preceding the close of Lent than in the previous Easter, and also that prices were some better. Carnations sold rapidly at 75 cents per dozen, and some of the more fancy varieties brought as high as 81. Violets at \$1.50 to \$2. Roses at \$1.50 to \$2 per dozen.

PAWTUCKET, R. I.—James H. Bovey reports: "As regards the cities of Pawtucket and Providence prices were about 10 per cent better than last year. Cut flowers were in great demand. Carnations very short in supply; prices 75 cents to \$1.50 per dozen. Violets in good demand. Tulips, paper whites and Von Sion in pots sold well. Most growers were late with HARRISII, and these and callas were in equal demand; prices \$1.50 to \$2.50 per 100. On account of the extremely wet weather there was quite a number of pot plants left over; still the boys appear to be happy. A noticeable feature was the free use of paper whites and daffodils in church decorations. The writer cleared out everything he could get the knife on."

BURLINGTON, N. J.—W. R. Bishop says: "Our florists here are well pleased with their Easter trade. John Shell reports his sales of both plants and cut flowers (mostly carnations) very much ahead of last year, and that by 10 o'clock Saturday evening he had scarcely any plants left. Joseph Smith made a specialty of hydrangeas, and having nice plants in bloom they sold well. He also had a good supply of tulips and hyacinths, and at the end of the week had but few left. J. H. Lukens makes a specialty of lily of the valley and has

the reputation of growing unusually fine blooms. Lewis R. Hancock makes a specialty of carnations and violets and is well pleased with his sales. He now grows but few roses, finding violets and carnations far more profitable."

EVANSVILLE, IND.—J. H. Wade & Co. report: "Easter trade was about the same as last year as regards prices. Cut flowers were most in demand. Not much call for plants except lilies, which did not pan out as well as last year. In cut flowers carnations were in the lead, with roses a good second. Bulbous stuff was slow sale, except daffodils. Supply of both flowers and plants was equal to demand. Quality fair to good. Good carnations are coming to the front with both feet and hitting the ground hard. Not the $\frac{3}{4}$ to 1 $\frac{1}{2}$ -inch blooms, but the 2 $\frac{1}{2}$ to 3-inch flowers, with good substance. Flim-y stuff won't go, and stem must be strong enough to carry the flower erect. The people will not be satisfied with less. Have had some good Jubilee for red and Flora Hill for white. But Hill does not seem to be a good grower, being rather weak and shaky so far. Perhaps it will do better later."

WILKESBARRE, PA.—Business, as reported from all florists, wholesale and retail, 25 per cent in advance of last year, and would have shown a greater percentage if the weather had not been so inclement. Roses plentiful and good; carnations scarce and poor, but high in price; lilies sold clean at 25 cents per flower; hydrangeas not in as good demand as other years; azaleas in good demand. Eastern wholesale commission men, anticipating a shortage in carnations, refused to promise any quantity to retail florists, promising hundreds where thousands were asked for, but owing to the heavy storm in cities took advantage of orders on their books and shipped largely to florists, who found themselves on Saturday night and Sunday loaded down with some carnations rather antiquated, but still they were all cleaned up, and by Monday refrigerators were emptied and the Easter of 1901 was satisfactory to both wholesaler and retailer.

THE LAND OF THE OLIVE.

The remainder of Mr. Herrington's essay on "The Land of the Olive," commenced last week, will appear in our next issue.

MADISON, N. J.—The Morris County Gardeners' and Florists' Society will hold the sixth annual flower show in the assembly rooms here, Nov. 5 and 6. Full details may be had by addressing C. H. Atkins, secretary, Madison, N. J.

ATCHISON, KAN.—Mangelsdorf Bros. report Easter trade as the best they ever had. All cut flowers were completely cleaned up and the sale of pot plants was very good especially of lilies.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head.

Every subscriber is entitled to a free advertisement not exceeding 35 words in any issue desired during the year. If the advertisement exceeds 35 words, send at the rate of one cent for each additional word.

SITUATION WANTED—No. 1 all-around florist, with 15 years' experience in all branches, wants situation as foreman; capable of handling men; state terms. Address Grower, care of Florists' Review.

WANTED—A young man for general greenhouse work. Address, stating wages, with board and room, M. L. O'Brien, Sharon, Pa.

WANTED—At once—two men for greenhouse and outside work. Apply to S. Muir, 5300 Michigan Avenue, Chicago.

WANTED—A good man at once for sodding and Chicago work. Daniel Branch, 3049 Indiana Ave., Chicago.

WANTED—To Rent by May or June, a small florist's establishment in or near Chicago preferred; hot water heating. Address DeWitt, care of Florists' Review.

WANTED—Trade catalogues at Prospect Greenhouses, Pawtucket, R. I.

FOR SALE—Some extra good second hand 1-inch pipe at 6¢ per foot; also some 4-inch; guaranteed sound. W. H. Salter, Rochester, N. Y.

WANTED—Several good American Beauty growers. Wiestor Bros., of Wabash Ave., Chicago.

WANTED—At once, a reliable, competent man, to take charge of range of houses growing roses (Debuties Brides and Maids), carnations, mums and violets; will pay \$12 per week; permanent situation to right man. Schlarf Floral Co., Erie, Pa.

WANTED—A good all-around man for general greenhouse work; must know his business; \$500 a month with board and room. If you can't do a day's work in ten hours don't apply. C. H. Green, Fismont, Neb.

POSITION or Manager WANTED

by competent man of over forty years experience in all branches of horticulture, or would run good commercial place on shares; best of references; good wages and steady position desired. Address—

LOUIS SALINGER,
care of H. Deetz or H. E. Michler,
PHILADELPHIA, PA.

FOR SALE—Ten greenhouses, about 22,000 ft. of glass, mostly 16 x 24 glass, heated by hot water. Large brick coal cellars, will hold four cars of coal. The greenhouses are built on a southern slope, and all in good condition, and planted to roses, carnations and bedding stock, all fine order. Also all plants for next year's crops. Two dwellings: one house has six rooms and basement, and other ten rooms and basement, with hot water and two separate boilers. Good city water pressure, and a little less than four acres of fine land. Close to cemetery; inside city limits. Fifty miles from Chicago and thirty-five miles from Milwaukee. This place must be seen to be appreciated. Apply to

ST. PAUL.

The Easter Trade.

Easter with all its trimmings, good fun, frolic and games. The weather, well, it could have been worse, and it could have been better. The first part of the week was extremely fine and warm for bringing in lilies and other stock, but Friday morning started in with heavy falls of rain mingled with sleet, snow and other cold stuff, and kept it up steadily for twelve hours, many of our stock-keeping florists wearing a sorry face in consequence. But Saturday it cleared up nicely and it was an ideal day for delivering. The rush of business was simply grand. Thousands of lilies were sold and soon there was a shortage.

Most all our florists grew longiflorum as Harrisii are too much diseased, but most of the plants were too short and lots of them produced only two to three flowers.

L. L. May & Co.'s shipping trade was larger than ever. Holm & Olson did a big business, having the best family trade upon the hill. E. F. Lemke had all he could handle. He had the finest of home-grown hydrangeas, the frusses measuring 18 to 20 inches across. Haugen & Swanson had several hundred pots of Lady Campbell violets that sold readily at \$1.00 per pot.

Carnations were more than scarce and seemed to be off-crop all around. Roses were more plenty. Church decorations were more elaborate than ever, and it was evident that money for this purpose was more easily collected than in the past.

I will close by saying in the name of the craft, "All is well."

CHRIS. BRUSSELMER.

WICHITA, KAN.

Easter trade was very satisfactory, being much better than last year. C. P. Mueller reports 25 per cent increase. C. A. Rose about the same. W. H. Culp & Co., 33 per cent, and all report good business.

Plant trade was good, with fair supply, except in lilies, which, owing to disease and mixed stock, were slow and irregular. Culp & Co. being the only ones who had anything near a supply—about 50 per cent of their stock coming on time.

Cut flowers, sold well, good stock bringing prices about 50 per cent advance over ordinary retail prices. Considerable stock was shipped in from Chicago and other markets. This stock was generally satisfactory, although some complaint is made of "sleepy" carnations and of damaged lilies caused by poor packing. American Beauties sold well and were good.

Churches as a rule were better decorated than usual, about all the available stock of decorative plants being used for this purpose.

Weather was fine, both Saturday and Sunday being springlike days with little or no wind, although Friday started in with enough wet snow to make the ground white and a high wind from the north, which did some damage over the city, although none of the florists were much damaged except by a scare at the prospect of a spoiled Easter trade, which happily did not materialize. Your Last Chance

on GERANIUMS.... 40,000 Rooted Cuttings Ready to Ship.

Our last crop of Geranium which we will offer in rooted cuttings is now ready. Our stock is all grown in benches the same as roses and carnations, consequently our cuttings are far superior to the stuff chopped off of pot plants; most generally sent out. Strong selected top cuttings, well rooted, ready for 2 1/2-inch pots of the following superb varieties—Brazil, Grant, Heteranthe, S. A. Nutt, Frances Perkins, Mrs. E. G. Hill, Beatie Potvin, Mme. Javlin, Mme. Brault, La France, Mrs. J. M. Gaar and La Favorite. \$2.00 per 100; \$18.00 per 1000.

PETUNIAS, double fringed, 8 novelties, White Fawn, Snow-Ball, Mrs. F. Sander, Pink Beauty, Fantasia, Helen Gould, Sun-Jana and Bonnie. 20,000 strong rooted cuttings well rooted, that will make saleable plants in a short time, and ready for immediate delivery. \$1.00 per 100; \$10.00 per 1000, in variety. Any special variety, \$1.50 per 100.

CASH WITH ORDER.

FRANKLIN, PA.

Volume of Easter business was larger than last year, but cannot say how much. With its demand for plants in bloom was mainly for lilies, azaleas and lilies in pans, in the order named, with sales of hyacinths in pots and pans, cinerarias, daffodils in pans, Crimson Rambler roses, ferns and palms in smaller numbers.

In flowers carnations were called for first, last and all the time, and although we had a good supply could have sold more. Roses were asked for and sold in limited quantity. But most buyers choose a cheaper flower. Lilies sold well and the list ended with violets, tulips, hyacinths, daffodils, chrysanthemums, Marguerites and assorted bunches. Prices were about the same as last year, except for violets, which were cheaper.

We have a quantity of plants in bloom left, but our stock was much larger to begin with, and a rainy Saturday interfered with sales. Plants were in fine condition, Longidorum lilies being stout and firm, requiring no stakes, and furnished to the pots with dark, bright leaves, and free from split flowers and insects. Pans of hyacinths and double tulips were just right, not being too much opened, but we had too many in large pans; a majority of buyers choosing 5 and 6-inch pans at the lower price; and this class of customers is well worth catering to.

W. T. BELL & SONS.

DALLAS, TEXAS.

Well, once again Easter has come and gone, and the Dallas florists draw a long breath. The Texas Seed and Floral Company report an advance of 50 per cent over former years in their sales. All good stock sold well. Their large double store was literally packed with azaleas, palms and Easter lilies, all of which were disposed of before evening. In cut flowers, Bride and Maid roses were plentiful, and sold readily at \$3 per dozen. Beauties, a good supply, all sold out at \$6 to \$12 for fancy. Bulbous stuff was scarce and in little demand. Carnations sold well and led the "van" in cut flowers. Violets scarce and demand good, especially for single. No call for valley. Many more Easter lilies could have been sold. Everything was cleaned up before 9 p. m., both in cut flowers and plants.

The special decorations of the Texas Seed and Floral Company in their store this season were very highly commented upon and speak well for the energy of this enterprising firm, and, by the way, this firm will have something to show in new carnations another season if some of their promising seedlings hold up to the present standard. F. W. B.

LANCASTER, PA.—Abraham D. Rohrer, the florist, died April 4 of inflammation of the brain, aged 62 years. He was one of the pioneers in the trade in this city.

THE FLORISTS' MANUAL.
A Reference Book for Commercial Florists

MONTREAL.

The year 1901, will be remembered by the people here for a long time, by the weather which occurred on the cold, cool weather which prevailed it and the insect abominations and cursed seed and crops to be late in the retailers eye account of the very low condition of the streets, thus making the work of delivering plants a very difficult one.

However, in spite of these checks, so far as can be learned, business was very satisfactory all around. Almost everything in the way of good plants is easily disposed of and at good prices. The same may be said of cut flowers. In plants, there were in pretty good supply, but the quality, with one or two exceptions, was not good. There is lots of disease present here this year. Sprays were plentiful and good, also tulips, hydrangeas, daffs, etc. Lilies, theodendrons, azaleas, snowballs, geraniums, etc. were in limited supply, but there is not a big demand for them here.

One of the best selling things was a fine lot of Ranunculus that one grower had in good shape in 5 and 6 inch pots. These were plants rooted about a year ago, planted out like carnations, dug up in the fall and potted about New Year's.

There was very little made up work in baskets this year. Montreal has not got educated to that yet, but I suppose it is the florists' own fault for not offering tastefully made up baskets, etc. of plants. Palms or ferns were not in demand and dandelions were not liked. In cut flowers, violets had a great call and some ran out of supply. Beauties also sold well, as did all colored roses. Red roses were very scarce. The supply of carnations was short, but to the surprise of some there were some white and light pink left unsold at the end of the day. Some of the local stock of Lawson, Marquis and Morning Glory (what a poor name) was extra good, and sold for good prices. Mignonette was in good supply, also all bulbous stuff, such as daffs, Narcissus princeps, Golden Spin, postions, etc. Valley fair.

Everything considered, trade must have been pretty good, as some say it was better than last year and others say about the same. Had the weather been more favorable there would have been a large quantity of good plants available, which now will probably have to be sold at a loss, unless business should be unusually good, which we will hope for. SLEEP.

OTTAWA, ONT.

Easter sales in the city altogether must have been 50 per cent more than last year. The older florists report an increase, and Wright, who opened a store last year, had an extra store for plants and did a big business in both, especially in lilies. Graham Bros. were strong in lilies also. They had a big stock of azaleas, which were mostly all sold.

Scrim had two stores and sold out most every plant of any value. Death, which he has made a specialty for for the last couple of years, again hung fire. He will not grow much of it in pots next year. It is too rich for Ottawa blood. The most popular plants were azaleas, lilies, roses and spiraea. Bulb stock was overdone. Half the growers in the city had their windows full of hyacinths, daffs and tulips. C. SCRIM.

Special Trace List for the month of APRIL.

OSWEGO, N. Y.

Less call for cut flowers at Easter, carnations having the preference, violets next, roses hereabouts, having a black eye for their keeping qualities, chiefly on account of not enough being grown here to meet the demand and that demand being filled with goods that have often been cut from two to seven days.

Quite a shortage of Easter lilies, although about a thousand were grown among the florists here there was but about fifty salable; they would not respond in growth to the best of treatment and were extremely irregular in their health and appearance.

Bulbous product had to fill the bill and seemed to satisfy. Good cinerarias sold well, but anything out of the ordinary, such as gonistas, calecolarias, begonias, Rambler roses, stocks, pelargoniums, etc., would only be admired and not bought. Some writers are continually harping that florists do not grow variety enough; let those same writers try the variety business and see if it will pay their coal bill.

Only a limited demand for azaleas, many buyers heaving a sigh of relief when they found they could not buy a two dollar lily for an Easter present to a dear friend and gladly bought a twenty-five cent hyacinth and had the delighted florist deliver it about two miles away at exactly eight minutes past four p. m., and the phone at your elbow to tell you that it was not there yet and they did not want it now, and I believe wishing in their hearts they had sent a pound of ten-cent candy instead.

The easter lily with its lost vitality is responsible for a great shortage in florists' receipts on one of the days that he should be reimbursed for cost, coal and constant care.

W. D. STEWART.

INDIANAPOLIS, IND.

Mr. A. F. J. Baur, of the firm of Baur & Smith, was married April 9 at Richmond, Ind., the bride being Miss Elma Marie Steinkamp, of that city.

The happy couple will be "at home" after May 1, at 3730 North Capital avenue, this city.

St. LOUIS.—The Plant Seed Co. will add 12x70 feet to the north side of their present warehouse, three stories high, and put in an elevator.

Lemon verbenas, \$1.50 per 100. Greene & Underhill, Watertown, N. Y.

VINCAS.

Vincas, 2 1/2-in. pots, \$1.00 per 100, \$8.00 per 1,000. Good & Reese Co., Springfield, Ohio.

Vincas, var., R. C., \$1.25, \$2.00 per 100. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, green trailing, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

Vincas, 2 1/2-in., \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

VINES.

Philodendron cordatum, 2 1/2-in. pots, \$1.00 per 100, \$8.00 per 1,000. Cash. Jos. H. Cunningham, Delaware, Ohio.

VIOLETS.

Marie Louise violet, fine plants, 10c per 100, \$10.00 per 1,000, root of runners, \$5.00 per 1,000, \$40.00 per 100. The above plants are clean and free from all diseases. They are mostly grown on stone work and 40 days at night; the fragrance and color of bloom are not to be compared with those brought on by all winter. Please call and see for yourself before you secure your plants. I will keep the order until you see the first of June. Please call early. C. Lawtzen, Rhinebeck-on-Hudson, N. Y.

About 12,000 violet plants. Sand struck cuttings, \$10.00 per 1,000. Write for prices, \$15.00 per 1,000 for Farquhar. Clean. No disease or black fly. Cash with order. Another lot to come on order. Five per cent off your bill if you come to see them before you buy. Joseph Marie, Rhinebeck, New York.

The only violet that has no disease. Princess of Wales; large clumps that can be divided into 12 to 18 plants and 20 to 40 cuttings from each clump, \$4.00 per 100; \$35.00 per 1,000. Cash. W. Reimers, Staunton, Louisville, Ky.

Violets. Rooted runners, strong, healthy stock. Marie Louise and Lady Campbell, rooted runners, 40 cts. per 100; \$3.00 per 1,000. Cash. D. C. Smith & Son, Andover, Md.

Ready now, a few thousand Lady Campbell violets from sand or soil. Write for prices. Wm. Swaney, Box 235, Kennett Square, Pa.

Swaney White, 2 1/2-in., \$2.50 per 100. Lady Home Campbell, 2 1/2-in., \$1.50 per 100. All clean. Cash. Swaney, Kennett Square, Pa.

Marie Louise violet plants for June delivery. Strong, healthy stock. Price on application. C. G. Velle & Son, Marlboro, N. Y.

Strong rooted runners of Princess of Wales, from soil, \$1.00 per 100; \$8.00 per 1,000. Cash. Helm Bros., Blue Island, Ill.

Marie Louise. Best sand rooted cuttings, healthy, \$5.00 per 1,000. Cash. R. Kilbourn, Clinton, N. Y.

Violets. Princess of Wales, rooted runners, 50c per 100. Cash. A. K. Fairchild, Whippany, N. J.

Marie Louise, from soil, 60c per 100; \$5.00 per 1,000. W. D. Chase & Son, New London, Ohio.

10,000 M. Louise violets, 2 1/2-in., in bud, \$1.50 per 100. Morris Floral Co., Morris, Ill.

MISCELLANEOUS.

Clerodendron Balfour, 2 1/2-in., \$2.00 per 100. Honey suckles, 3 sorts, 2 1/2-in., \$2.00 per 100. Hoya carnosa, 2 1/2-in., \$2.00 per 100. Lemmon ponderosa (giant lemon), great pot plant, 2 1/2-in., \$6.00 per 100. Myrtus communis, sweet German, 2 1/2-in., \$2.00 per 100. Phrynium variegatum, elegant foliage, 2 1/2-in., \$2.50 per 100. Plumbago sanguinea, pink flowers, 2 1/2-in., \$2.00 per 100. Sarcocolla zeylanica, 2 1/2-in., \$2.00 per 100. Stephanotis floribunda, 2 1/2-in., \$2.00 per 100. The Good & Reese Co., Springfield, Ohio.

PLEASE MENTION THE REVIEW WHEN WRITING ANY OF THESE ADVERTISERS

the bright sun that we get continuously bringing out the colors in such a vivid manner. All visitors are struck at once on beholding them. A bed of geraniums will be about a foot high and one mass of bloom, and so with all other flowers. The parks are supplied with plants from their own greenhouses, which are under the charge of Superintendent Graham and Foreman Davies. Their output this year will be about 150,000.

Hurt Bros. have moved their flower store to Fifteenth street in one of the busiest portions of the city, and are likely to do a good business at their new stand.

We had Adam Graham, of Cleveland, Ohio, as a visitor. He was on his return from California. THORNE.

ST. PAUL.

Easter will go on record as one of the best, if not the best, ever known here. The weather was marred by rain on Friday which undoubtedly curtailed sales somewhat. However it was nice and mild for delivering plants and there were few or no complaints on account of damage.

Contrary to expectations there were enough lilies to go around and where a shortage was apparent a few weeks before, a small surplus was found when deliveries had all been made. The favorable weather for two weeks preceding Easter brought about belated stock in good shape, though the effects of forcing were apparent in many plants.

There was nothing particularly new or striking offered this season. Lilies were as popular as usual. Hydrangeas and azaleas sold extremely well. Hybrid roses sold well, as usual. Ramblers were in good demand though not as eagerly sought for as when first introduced. Bulbous stock went fairly well with the smaller growers but will never be popular with the best trade here. Pans of extra fine hyacinths containing four to six bulbs each were almost a drug on the market.

In cut flowers the most marked demand was for colored flowers in contrast with the demand for white flowers in former seasons. Fancy carnations sold at sight bringing as much as and selling more freely than roses. Beauties were in good demand though prices ruled high and good stock scarce. There was a great call for violets which retailed at \$2.00 per 100 and thousands were disposed of at these figures.

The stores all had good displays. L. L. May & Co. had their large conservatory and store filled to overflowing. A. S. Swanson had an overflow display at 6th and Wabasha. Holm & Olsen had their store packed solid with plants. Lemke had his usual display of good stock in both stores, while C. Vogt, O. Hjersekern and all the others had dazzling displays.

The shipping trade was very good both in plants and cut flowers.

Prospects for future trade are very encouraging and spring bedding stock should be in good demand. X. Y. Z.

CINCINNATI.

Critchell's have closed their city store at 110 E. 4th St. and will hereafter grow for the wholesale trade only. Their address now is 719 North Crescent Ave.

Mr. B. P. Critchell, superintendent of parks, has sufficiently recovered from his

recent illness to attend to business and visited the park office for the first time last Tuesday.

AUGUSTA, ME.—G. P. Sanborn reports Easter sales as larger than ever before, with carnations and roses very scarce.

CEDAR RAPIDS, IOWA.—I. N. Kramer & Son say that with them Easter trade was better than last year, in both cut flowers and plants.

MALDEN, MASS.—E. D. Kaulback & Son say their Easter trade was about the same as usual, but believe it would have been much larger had the weather been fair.

BRAATTLEBORO VT.—C. E. Allen says Easter sales were larger than last year, with carnations and lilies in most demand. Potted plants sold in limited quantities.

NEEDHAM, MASS.—Denys Zingibel reports: "Our market is in Boston. The highest price ever obtained for carnations was realized, Lawson bringing easily \$10 per 100, and Marquis a close second, at \$8."

NORWALK, CONN.—H. F. Bynbe reports supply ahead of demand for Easter, though demand was fair considering that Saturday was a very stormy day. The call was more for blooming plants than for cut flowers.

CARLISLE, PA.—Jesse Robbins reports Easter trade as fully 25 per cent better than last year, and that it would have been still better had not Saturday been an extremely disagreeable day. There was an increased demand for flowering plants.

R. S. H.—The greenhouse you describe is hardly large enough to make a business. If you have some other occupation, you might grow a few bedding plants for local demand as a side issue. You could not produce enough flowers in the house to make shipment to market profitable. With the addition of some hot-beds you might be able to produce enough spring bedding plants to make it worth while, providing there is sufficient local demand for them.

ROCKFORD ILL.—The Rockford Star has inaugurated a movement looking to the embellishment of the city with plants and flowers this summer and the florists are co-operating by contributing plants, etc., to be awarded as prizes to those having the best decorated ground, etc., during the summer. The florists who have contributed so far are H. W. Buckbee, R. H. Shumway, W. B. Reynolds, W. S. Hizer and J. J. Soper. The prizes are to be awarded by a committee selected by the Federation of Women's Clubs.

DALLAS, TEX.—The Texas Seed and Floral Co. will this summer enlarge their fine plant to double its present size and will also build new and modern packing sheds. They will also put in a waterworks of their own, building a reservoir and erecting tanks 80 feet above, using a gasoline engine for forcing the water up into the tank, with direct pressure from engine when needed. F. W. Beach, formerly of Richmond, Ind., is now superintendent of this plant.

NEW ORLEANS, LA.—At a recent meeting of the New Orleans Horticultural Society it was decided to give a chrysanthemum show in the fall, and the following committee on arrangements was appointed: P. Abele, ex-officio; J. Steckler, E. Baker, J. Eblen, E. Valdejo, Charles Elbe, Harry Papworth, J. St. Mard, Dan Newsham, secretary.

SALT LAKE CITY, UTAH.—M. Christopherson reports that Easter trade in this city must have been double that of last year. American Beauties and Harrisii were never before so universally displayed. The florists all seemed to be very busy.

CINCINNATI, O.—The will of Thomas Knott, the florist, leaves a \$50,000 estate to his wife for life. After her death the property goes to the children.

IT PAYS.

One mail brought me letters with money orders in them from Illinois, Georgia, Mississippi and Kentucky for dahlia bulbs which I advertised in the Review. It pays to advertise in the Review. J. A. KENISTON, Newburyport, Mass.

HAMMOND'S SLUG SHOT.

1901

Destroys Pests which prey upon Vegetal on in the GREENHOUSE, CONSERVATORY or GARDEN.

SLUG SHOT is a composite powder not dependent solely upon any one of its parts for effectiveness. For 21 years **SLUG SHOT** has been used, doing effective work against Leaf Eaters, Juice Suckers, Sow Bugs, Snails or Grubs in the soil. **SLUG SHOT** is spread by duster or blower. Workers will carry it through a sprayer or pump. It destroys in this way elm tree beetles, caterpillars on trees. Where Snails or Sow Bugs are troublesome, dust **SLUG SHOT** on the soil with a duster. **SLUG SHOT** rids lawns, calves and dogs of lice and fleas. **SLUG SHOT** is put up in tin perforated screw-top canisters and cartons holding one lb. The 5-lb. package (see cut) retails at 25 or 30c each, larger packages at less rate. **SLUG SHOT** is

Sold by the Seedsmen in all parts of the United States and Canada.

GRAPE DUST for mildews and blights.

SOLUTION OF COPPER against fungus of all sorts.

THE RETAIL FLORIST.....

Wedding Decorations.

Very often some detestable forms of "greening" can be noticed in work done by alleged "best houses." For instance, you will see Florida palm leaves arranged to form a flat background, and the delicate greenhouse flowers are put among the coarsest of outdoor greens. It should be remembered that the very finest decorations can be made entirely of greens; the arranging of them is as important as the arranging of flowers; anything can be used but there is a proper place for everything.

Just at this time wild smilax from Alabama furnishes us with the most effective material. Perhaps you will have noticed that there are two varieties of this smilax shipped; one has long narrow leaves, keeps very poorly and is otherwise inferior to the round leaved berried kind. Another thing we notice the boxes are being packed on the principle used by the grower who measures his rose stems by the quarter inch; many of the cases of wild smilax coming into New York are frauds, for according to what is charged for them the cultivation of this article promises better returns than cotton, corn or any of the farm products. The increasing use of it justifies serious consideration.

Well, as to its usage, we use it wherever we can because there is nothing to equal it, and it looks all the better if trimmed off here and there with a few long strings of asparagus. We never stick palm leaves here and there as if spasmodically done; we prefer to group greens. Suppose we have a long wall, balcony or other space to cover, first put up your vine-like tracery of wild smilax (this is apt to be too monotonously regular) and a panel cluster of magnolia, laurel, needle pine, or almost any evergreen will add character to your work. Avoid sameness; the eye can "size up" some decorations, like at our annual flower shows, in one sweep; that is an unfortunate thing to happen to any sized decoration. Usually temporary picked up "help" is sent to fix up the church; this is a mistake.

Of course palms may or may not be made the crowning feature of any large decoration; they are expensive. In cases where very tall effects are desirable, and this is nearly always required, at least each side every altar, 'tis cheapest and best to make up immense sabal palms which can easily be done. If you have no natural stump moss up a piece of scantling, stick it in a weighted green tub, arrange your palm leaves as if they were growing; you can easily make a good natural effect, but be careful to hide the ground work. Another good way is to rig up a round pillar effect with wire netting and stick your leaves in it; this dispenses with moss.

The use of wire netting is becoming more regular in difficult wall decorations, or where nail driving is prohibited. The old system of stringing wires to cover

a roof for instance is done away with in favor of the net work. Stiff garlands such as that made from laurel or other greens are not strictly correct for church weddings. The green work should have a pastoral tinge to it. There is too much ribbon work introduced into church decoration, it is a cheap form of deceptive decoration and is inappropriate in church which teaches the banefulness of frivolity. Use flowers and greens with all the profusion you can and less school girlish ideas.

Remember, "any old color" won't do at wedding decorations; purple and melancholy colors are out of place. They should never be used unless at a funeral. Bright colors, however, are being more generally adopted. The "all green and white" craze is dying out, as it should do. We always imagine the church is fixed up for a funeral where there is an entirety of sickly tones. A wedding decoration, no matter where it is, should have a festive insinuation about it. This can best be accomplished by taking advantage of pillars, balconies or elevated positions where a spray of greens and a cluster of flowers may delight the eye.

The design is 4 by 3 feet in size, the page being of Bride roses—set solidly into the edges of the book being of English roses. The two pages of the open book are separated by Herbe roses. There is no lettering on the pages but the lines are indicated by lily of the valley. The back and edges are relieved by Asparagus plumosus and Sprengerii. On the lower corner of the right hand page is a 4 inch wreath of violets.

The price of the design was \$100 and it contained 1,800 roses, 200 valley and 2,500 violets. Miss Annie Kreitling was the artist.

CHRYSANTHEMUM NOTES.

Exhibition Flowers.

"Does a chrysanthemum plant need a longer season of growth than is usually given it, in order to produce the very finest flowers for exhibition?"

This question was asked me and I answered "Undoubtedly it does." It is a question that does not affect the purely commercial grower so much because nowadays he does not cut so much of a figure on the exhibition table, the private grower having practically elbowed him out, in the eastern exhibitions anyway, but it does affect the man who grows or wants to grow the finest flowers.

I see the New York Florists' Club is issuing a comprehensive schedule for a show in Madison Square Garden this year and since New York is falling into line with Boston, Chicago and the other large cities with regard to holding an exhibition, and is issuing its prize list in

A Floral Book.

In the meantime see that you are ready for early plant trade. A window box or vase of pansies outside your own store might bring you some good orders. Imported plants of Aucuba Japonica and Laurus rotundifolia are being extensively used here for early spring vase work; large specimens of the latter are fine for general decorative work. IVERA.

A FLORAL BOOK.

We present herewith an engraving from a photograph of a floral book arranged by Walter Kreitling, Chicago, for the funeral of the late A. C. McClurg, head of the great publishing house.

good season, we may conclude that there will be more exhibition flowers grown this year. Let us then see what we can evolve from our experience, in regard to early versus late propagation, as affecting the size and finish of the flowers.

The finest flowers I ever grew, in my own humble opinion, were cut from a batch of Robinson that were rooted in December. These were kept cool all winter but still moving gently and early in March planted permanently in boxes four feet long and ten inches wide. The plants were kept to single stem and were placed outside during May and June. Early in July they were placed in a

They only stayed there for the remainder of the season. They attained a height of six to seven feet and the flowers were of superb finish. This may be called an extreme case as hardly one man in a thousand has facilities for handling a batch of plants in such a manner and I hardly think it necessary if he had.

Cuttings rooted in February or March and kept in single stem have always given splendid results with us. I have never yet obtained flowers of the same quality and finish from cuttings struck end of May or early in June. The explanation of this is simple enough. If the plant is started early, before the intense heat of early summer, it will make a stocky short-jointed growth and will continue to make such growth if treated rationally. This will insure a natural maturation of the tissues of the plant and the wood will be what is called "ripe." Contrast this kind of growth

with the growth you get from late rooted cuttings which run up very quickly after being planted out, and you can see at a glance where the difference comes in.

You may argue that we get so much sun here that the plant will get properly matured anyway and you would trouble us to keep them from getting too hard and stunted unless you shade your house. There is a difference and a wide one between a natural ripening of the wood and an unnatural premature ripening, or rather roasting, from a hot sun. I have heard growers claim to get just as good flowers from late rooted stock as earlier, but my own experience teaches me otherwise. The flowers may perhaps have as large a spread but investigation always shows them to be deficient in depth, finish, and lasting qualities, and these are points that count for much in exhibition flowers. —BRIAN BOU.

putting some strong plants about now, cutting the canes back to a few eyes, and then when they break leaving only five or six of the best growths and these we will endeavor to grow into fine canes. We start them, of course, as cool as possible, but keep them under glass all summer in the full light and put them out of doors to harden up the growth in September or October. The advantage of these plants is that they are sure to flower. With any kind of management they are bound to be a success.

Last year we were troubled with mildew when they were making their strongest growth in June. Allowing them to get very dry was, I believe, the cause. Don't let mildew attack them or it badly hurts their growth.

I tried a similar method last spring with Ulrich Brunner and some other hybrid peonies, growing them in pots during the summer and cutting them down in winter and forcing. They produced good flowers, but it is not necessary for Easter forcing with hybrids, because they force easily from lifted plants. You have to cut a good deal of wood away from them, while the ramblers are very top-heavy. —WILLIAM SCOTT.

MISCELLANEOUS SEASONABLE HINTS.

Trees and Shrubs.

Florists often combine a little of the nursery business with their bedding plants and supply everything for the garden. We have a curious spring. Only a few days' fine weather and then a heavy snow storm. All deciduous trees and shrubs must be got into the ground without delay. The rule is if they have started to grow it is risky to move them and in a few days the time will be over. Nearly all trees and shrubs should be pruned when planting and this will particularly help those that are transplanted late. They are bound to have lost their working fibers and cannot supply sap enough to keep the tops growing. You will often see a tree expand its leaves feebly and then collapse because it has no working roots to support it.

I am aware that I am late in giving any hints on deciduous trees and shrubs, but in plenty of time for the evergreens, so-called, or conifers as they should be called. The middle of May is plenty early enough for these. In fact, they should not be moved till the growth starts and if you are buying any see that the nurseryman does not deliver them till the proper time. I have frequently had occasion to give you what, in my humble opinion, is the only way to plant a tree or shrub or evergreen. It is little use to dig down more than a few inches lower than the length of the roots or depth of ball for you don't want the roots to go down, and in but a few trees are they inclined to. But give them all the width you can afford. If it is a prepared and trenched border that you are going to plant shrubs in, then a hole large enough for the roots is sufficient, but in the case of single specimens any distance apart. The ground is seldom all prepared and a hole is dug especially for the tree. Make it wide and put in good soil and manure and you will be correspondingly rewarded in the growth of your tree.

Never in the case of trees and evergreens plant more than two inches lower than they have been growing in the nursery.

I believe in getting the tree in proper position and sufficient soil around and among the roots to firm them, or we will say the soil filled in to within four or five inches of the surface, then pour in water enough to thoroughly soak every particle of soil. This carries the soil compactly around every root, a most important point. After the water has soaked in then fill up with dry soil, which acts as a mulch. I am sure this is the successful way, the right way and only way, and worth many waterings on the surface. If you have to water on the surface then it pays well to spread an inch or two of stable manure round the tree or shrub as wide as the excavation.

Sweet Peas.

It is to be hoped that you sowed sweet peas the moment the ground could be worked. I often see great neglect in giving them some support. It should be given them when they are a few inches out of the ground, and not wait till they are a foot high and dropped over.

Asters.

If your asters are large enough to transplant and the ground is dry, there is no need of delaying the planting. A chilly night does not hurt them.

Crimson Ramblers.

We have tried again the Crimson Ramblers lifted last November and forced for Easter, and with us it was a dead failure. I believe this was largely because we did not have them on our own grounds and had to purchase them and have them shipped a few hundred miles. It is a good plan to plant out a few hundred small plants this spring on a good piece of soil. The strongest can be lifted this fall and the weaker left for another year.

With our experience of the past, we shall, however, stick to our old plan of

IN THE LAND OF THE OLIVE.

(Read by Arthur Houghton before the New York Florists' Club, April 8, 1891.)

(Continued from issue of April 11.)

Continuing along the coast from Cannes we passed at

Golfe Juan

to visit the Villa Menier, another superb place with a long frontage to the sea. Its spacious grounds are well planted, showing fine massed effects of palms and bamboos, and there are giant trees of Eucalyptus globulus, which were in flower at the time. M. Rifaud, the gardener, highly praised the eucalyptus for exposed situations such as this, saying it was rarely broken by the strongest winds. Araucaria excelsa was represented by several magnificent trees 50 to 60 feet high. Adjoining is the garden of the Villa Valetta, its most noteworthy feature being a splendid group of Washingtonia filifera.

Les Cocottiers

was next visited. It is a nursery, but, as the name would imply, is named after the cocon palms, of which it possesses a group of truly marvelous specimens of "flamboyant." They are growing at the foot of a rocky hill, and have grand columnar stems 20 to 25 feet high surmounted by splendid leafage, a picture of luxuriant health. The world-famed nurseries of M. Nabonnand are next encountered, and they, too, have beautiful palms, although roses are the special culture.

A few miles more along the lovely coast, and we come to

Antibes,

another garden spot with much commercial floriculture, and having some large, comparatively level areas, and fine facilities for extensive culture. In every flower store throughout the trip we had seen carnations. At Antibes we found a grower of carnations, by name M. Carri. He has the largest glass establishment we saw, and everything well grown. Fifty houses, ranging in length from 100 to 150 feet, are devoted to carnations, all splendidly grown and

Central Feature of Easter Window Display by P. J. Hauswirth, Chicago.

abundant in flower; but what a disappointment when judged by the standard of those we have in this country. While appreciating the gravity of the assertion, still it must be asserted every carnation seen here was absolutely worthless for the American market. Almost all were bursters, and the majority of them variegated in color, in hues often by no means pleasing. The houses are cheaply constructed, and the only provision for heating was a little stove standing about the center of the house, in which a small wood fire is lighted for a few hours when occasion requires. The plants are set in the ground in rows about two feet apart. Doubtless our fine carnations would grow as well there, for they would have the same bright sunshine with solar instead of artificial heat. Roses were very well done. An immense block of glass approximating an acre was planted entirely with Marechal Niel rose trained to transverse trellises. The earliest batch was just commencing to bloom, slight artificial heat being used; but solar heat suffices for the two batches that follow. Hybrid perpetual roses are forced in immense quantities. They are first estab-

lished in the open ground and the house erected over them when strong enough to force. A large block of smilax (*myrsiphyllum*) was growing in an open silt house, and there was a splendid lot; but M. Carlat said even grown thus he could not compete with northern cultivators. At the time of our visit he was doubling the size of his establishment, a six-acre tract being graded into a series of four immense terraces, solely for roses and carnations.

The Villa Thuret, at Antibes, was visited next. It is a public garden of great botanical interest, the collection consisting of everything known to be hardy about the Riviera. This garden contains the first eucalyptus planted in the south of France, and it is a fine tree, though not equal in dimensions to the one previously noted at Hyeres. The first *Jubaea spectabilis* planted in the south is here also, and a magnificent specimen, having an immense stem, girthing about 12 feet, is 20 feet or more in height, with a proportionate crown of leaves. Pittosporums, acacias and other flowering shrubs and trees are represented in great variety.

The Cap d'Antibes is a bold, olive-

colored promontory, putting its end into the sea, and at its extremity is the Villa Eden-Roc. En route to pass by a number of little flower shops where cacti, anemones, ranunculuses and other exotics are being gathered, hunched and peddled for northern markets; notably a variety of great azalea by the roadside, of which a dozen had recently been cut, of various dimensions and other familiar plants of large in stature and in measure of growth. A long, rocky beach here constitutes the garden of the Villa Eden-Roc, and here, might be probably spent there enjoying its wealth of plant beauty—the aloes, cacti, eupatias, crassulas, mesembryanthemums and hosts of graceful foliage and flowering plants that have been naturalized in a real rock garden. The congenial conditions may be realized, for on the lawn above stand immense trees of *Ficus macrophylla* and *Oreopanax dactylofolium*, while the flower beds are filled with Chinese primulas and Persian cyclamen, and an *Aspidistra* and *Begonia Rex* were an undergrowth and ground cover, among groups of pittosporums.

Nice

though popular as a resort, is horticulturally far behind its neighboring places. It has a town garden, however, along the sea front that will be better with age, and which must have involved enormous expense in the making, as it is built over the broad estuary of a river that flows into the sea at this point. The broad "Promenade des Anglais," too, is planted with Phoenix, and has many flower beds. A short stay suffices here and we hasten on to

Monte Carlo

to see the magnificent gardens that surround the Casino. They are a revelation of beauty, and planted with such a variety of things, one hardly knows what to single out for special mention. Having climbed the steps that lead up to the Casino from the railway station we were first astorished by a great mass of *Aloe ferox* in flower, a hundred spikes of fiery crimson, vividly effective. We pass round, however, to the town side, and note first the formal garden, which is in reality a long vista, terminated by the Casino. The garden is slightly depressed, and the vista has been formed by a fine piece of planting. An avenue of *washingtonias* alone would be effective, but this has been made lighter in effect and doubly beautiful by alternating each palm with an Australian tree, *Brachychiton populifolium*, a tree of singular grace and distinctiveness, having a smooth stem, of pyramidal tapering growth, and gray-green leaves; in fact, it might be called an evergreen aspen. This is the only piece of formal gardening; elsewhere natural arrangements prevail, and the gardens teem with rare and choice specimens and groups planted to the best advantage. Among palms we noted *Thrinax Chuco*, a rare species with a spiny stem; *Pritchardia nobilis*, truly noble *Cocos australis* in many fine specimens; *Brahea Roezli* here as elsewhere wonderful in color; *Chamaerops filifera*, with leaves cut into narrow segments; *C. Martiana*, a rare and distinct species; *Cocos Blumenavi*, stately, tall and graceful; *C. ceyadifolia*, with a slender 30-foot stem and a heavy head of eyes-like leaves; *Corypha australis*, Phoenix spinosa, *Lantana borbonica*, while an exceptionally tall date palm gave support to a

50 foot specimen of *Cereus quadriformis*. *Ficus macrophylla* was represented by a tree about 40 feet high, with a branch spread nearly 30 feet in diameter. *F. religiosa*, too, was a handsome tree; but quaint, in fact unique, was a specimen of *F. hoodburghi* that had developed aerial roots like the banyan, of which there were five masses, having an 8-foot descension at almost equal distances round the stem, and all having entered the ground the tree was certainly securely anchored.

Isolated upon the grass was a large plant of *Strelitzia regina* in flower, while in a more sheltered nook was a marvelous mass of *Strelitzia augusta*, 30 feet in height, half as much in diameter, with enormous musa-like leaves. *Yucca laevis* and *Y. guatemalensis* 20 feet in height, *Aralia palmata*, *Oreopanax dactylofolium*, *da-sylvionis*, *opuntias* and bamboos of tropical stature and *Luhuriance* were noted. In fact, if time and space permitted, much more might be said of many rare and choice plants, all hardy and happily at home here.

This wonderful garden is a monument of the most enduring character to the capacity and ability of M. Van den Daele, who has made it what it is during the twenty-one years he has had the direction of it. Its floral feature, too, are on the same elaborate scale. About 80,000 cyclamen and 40,000 primulas are raised annually, the bulk of them planted out in the beds and borders. There were some striking beds of *lachenalias* in flower. Several miles of terraces form a supply garden; in fact, this portion of the establishment is prodigious, and replete with a large and varied stock of plants. We were informed that the Casino gardens have a working staff of 200 men.

A walk around the palace of the Prince of Monaco concluded the day. It stands on a high promontory thrust out into the sea, and on the extreme point, which is covered with scrubby pines, were masses of red geraniums several feet high—in fact, a tangled, thick undergrowth to the pines, about the most curious association one could think of.

Vitigniglia,

the first town in Italy, was the next stepping place, and La Mortola, the garden of Mr. Thomas Hanbury, our destination. This garden is a series of terraces on a steep hill-side, and is full of rare and beautiful plants. Especially noteworthy were some gigantic plants of *Agave Salicaria*, *fontecroas*, *opuntias*, *banksias*, *pitto-rumias* and others previously noted elsewhere. The drive to and from the place was most interesting, as we saw miles of terraces, many of them only wide enough to accommodate a row of grapevines or a single row of peas, which were then in blossom. Some of the terrace walls here were veiled in ivy-leaved geraniums, which, planted at the top, had grown down, completely hiding the wall, and gay with a profusion of bloom.

Continuing along the coast through olive groves, lemon orchards and fruit gardens carved out of the mountain side, looking like gigantic flights of steps, we reached Genoa, and here all of horticultural interest ceased.

MORRIS, ILL.—Mr. A. Mitting, of the Morris Floral Co., has returned from a three days' visit to California.

DESIRABLE PERENNIALS.

The rapidly growing interest in the cultivation of hardy plants and shrubs as shown by repeated and eager inquiries of what to plant and where to obtain the material, makes it evident that any facts concerning "perennial border" plants must be useful to florists and dealers as well as to their patrons.

If you will look over the catalogue of any dealer in hardy plants you will find a large number of species enumerated which can be of no use or interest outside of a botanical garden. The uninitiated purchaser who buys them on the strength (or length) of their inviting names will meet only vexation and disappointment. Other species, valuable under suitable conditions, may have certain peculiarities of growth or habit which will render them an unmitigated nuisance to the cultivator of limited space. For instance, certain of our native asters and golden rods have a capacity for spreading by the roots which involves a great amount of labor to restrain them within proper bounds in a small garden.

Plants which grow too readily from seed are also to be regarded with caution, as they may in time menace the existence of their less prolific neighbors. Many dealers and collectors are advertising and sending out plants of dangerously poisonous properties without warning to purchasers and grave results sometimes follow. Cases of poisoning have been reported from children eating the seeds of the purple thorn-apple (*Datura Tatula*). Aconite and foxglove are frequently cultivated as ornamental plants without a suspicion of their poisonous character. The common oleander (*Nerium Oleander*) is highly poisonous, even its fumes being deleterious to some persons.

The rapid extinction of some of our choicest native plants because of the breaking up of the prairies and the close pasturage of the woodlands makes it desirable to save them if possible by cultivation in perennial borders and elsewhere.

CREMATIS: The common Virginian's Bower (*C. virginiana*) and the Leather Flower (*C. alba*) are two pretty vines native through this state. *C. virginiana* has showy panicles of small white fragrant flowers.

AQUILEGA: The Red Columbine (*A. canadensis*) is one of our most graceful native plants in form, color and foliage on banks and bluffs.

TRIALICTRUM: The Meadow Rues (*T. polygamum* and *T. dioicum*) deserve a place in any wild border on account of their beautiful foliage. *T. polygamum* will grow four to six feet high, while *T. dioicum* is as graceful as a fern.

MENISPERMUM: The Moon Seed vine is a pretty woody climber with rich angled leaves and purple grape-like berries. The root has a medicinal tonic principle.

PHLOPHYLLEUM peltatum: The May-Apple is a pretty, easily grown perennial, especially fine among trees or shrubbery.

SANGUINARIA Canadensis: The Blood Root with its large rich leaves and beautiful white flowers graces rich woods in early spring. Blended with trilliums, hepaticas and dicentras it can be made one of the choicest ornaments of the border.

HIBISCUS militaris, a bold, strong

growing hibiscus with large rose-colored flowers; a close second to *H. californicus*.

GERANIUM maculatum, the wild Crane's Bill, makes rich bunches of foliage and flowers when cultivated. All plants of this order are handsome, but the other native species are too straggling in growth to be effective. The *erodiums* have the same fault.

SILENE stellata, the starry Campion, forms dense bunches of tall stems, with whorled leaves and finely fringed white flowers.

CEANOTHUS Americanus: This little member of the Buckthorn order is popularly called "Red Root" and "New Jersey Tea." From its massive woody roots a cluster of leafy stems crowned by rich masses of delicately beautiful white flowers spring up each year. The root has sometimes reached sufficient size to be cut into veneers when it rivals rosewood in beauty.

AMORPHA frutescens, a tall shrub with the aspect of a caragana and with spikes of purple flowers marked with golden stamens.

AMORPHA canescens: Lead plant, and locally called shoe-string, is a pretty little prairie shrub or half woody plant. The spikes of gold and purple are beautiful.

TEPHROSIA virginica, Goat's Rue, is a beautiful plant for dry, sandy locations. *CASSIA marilandica* (American Sena) is a fine plant forming close masses of acacia-leaved stems three to five feet high with showy yellow flowers at the top.

Many of our native composite flowers are worth cultivation for the boldness which they lend to the outlook. I will name only a few of the most desirable:

VERNONIA fasciculata, Iron Weed, is a coarse plant, but has showy, dark purple masses of flowers, usually three to five feet high here. It has one drawback, the matured heads turn a dusty brown and are lifted into undue prominence by the lengthening of the pedicels.

ETUPATORIUM: The *eupatoriums* are quite effective in a mixed border. The *Boneset* (*E. perfoliatum*), white Snake Root (*E. ageratoideis*) and the Joe-Pye weed (*E. purpureum*) are well-known wild flowers. They are easily transplanted, keep their place well and are free from bad habits.

LIATRIS: The leading species of *liatris* should be present wherever there is any space for wild flowers. They are the most characteristic feature of our Illinois prairies and woodland openings. The compact shape of the tubers makes them easy to transplant and there can be nothing more showy. *L. cylindracea*, *L. pycnostachya*, *L. scariosa* and *L. spicata* are the best for this locality.

SOLIDAGO: The Golden Rods as a body are so well known that it might seem needless to say anything in their favor, however they vary greatly in availability. The species which are of robust growth and prone to spread rapidly by root runners as *S. canadensis*, *S. serotina* and *S. missouriensis*, are likely to prove troublesome where space is limited. *S. caesia*, *S. latifolia*, *S. speciosa*, *S. nemoralis*, are very pretty forms of smaller growth which remain where they are planted. *S. rigida* and *S. Riddellii* are somewhat larger (two to three feet), with larger heads of fragrant showy flowers. *S. patula* is a fine bold plant (six to eight feet), for very

New Pink Carnation
Cressbrook.

moist locations. The Golden Rod is one of the many flowers accused of being the cause of hay fever, but the evidence is not conclusive. JOHN HIGGINS.

CARNATION CRESSBROOK.

This new pink carnation originated with Mr. Chatterton Warburton, of Fall River, Mass., and the blooms shown at the Baltimore convention of the American Carnation Society were certainly fine. It was scored 94 points by the judges, which is 9 points more than the number required to secure a certificate. The blooms are a very pretty shade of pink, well formed and borne on long, stout stems. We were very favorably impressed with it. Since the convention the variety has scored another 94 points, this time at the Boston Flower Growers' Exhibition on March 19th.

PHILADELPHIA.

The Market.

Business is in fair shape when you consider that it is the end of April. Quaker's ladies, crocuses and snowdrops are in full bloom outdoors. Next week will be May.

The plant-men hardly did as well as usual with leftover and belated Easter stock. The stores had more than usual to begin with; the azaleas were all too ripe to keep, and lilies very plentiful. Most of the stock has been cleared up somehow and its place is being filled by the next crop. The more up-to-date place, the quicker the benches are cleared and refilled, for time and space mean money.

While business is fair for this season there are entirely too many flowers on the market. Carnations hold up fairly

well, but second-class—well, in fact, all second-class stuff is in over-supply. The street men help to dispose of the stock, but the rainy weather has been against them. Lilies continue abundant and can be had at any price. Large white and yellow daisies sell fairly well at \$1.50 per 100; also white sweet peas at same price; Blanche Ferry goes slowly at \$1 per 100. Smilax and asparagus continue in fairly good demand.

Various Items.

William K. Harris, who was taken ill on Easter Monday, is happily recovering.

Hugh Graham had some first quality hyacinths that sold readily for 15 cents each in 4-inch pots. This grade, by the way, nearly all goes to Germany, where the bulbs bring fancy prices, about \$6 per 100; whereas in this country \$3 to \$4.50 is about the highest price obtainable.

John Curwen, Jr., formerly of Villa Nova, has leased 15,000 feet of glass at Glen Head, Long Island. Mr. Curwen has done well with carnations and violets.

Secretary Rust has a band of able, hard working growers who are pushing the Pennsylvania Horticultural Society along in good shape. The April meeting brought out sharp competition for the prizes offered. Cultural papers were read by experts and keen interest was manifested.

It is the fashion among our horticultural writers to make disparaging remarks about the foreign salesmen who visit this country each spring. Probably this is due chiefly to regret that we are unable to supply our own wants in plants and bulbs. Until we can do this we owe a debt of gratitude to the enterprise of these growers from abroad, who produce what our customers want

and send their representatives to our door to offer their products. This city has been known for some time as a good market by these travelers.

The business done here in palms has fallen away of late years; we do them well now ourselves, thanks to Dreer, Ball, Hancock and others. The importation of ananias has increased; we have as yet no specialist in this field; there are also a great many *Ficus elastica*s still imported. The greatest increase is among the flowering plants, especially azaleas; these are so admirably and cheaply grown as to defy home competition.

The quantity of bulbs which we import each year is simply enormous. At present this branch of the business is barely holding its own, there being a slight increase in bedding and a distinct decrease in forcing of bulbs. The falling off in the quantity forced each season is due partly to diseases affecting Harrisii lilies, narcissus *Von Sion*, tulip *La Reine* and some varieties of Dutch hyacinths and partly to a change in taste, which has put these showy flowers on the back track.

Hugh Graham built a new palm house before Easter; to fill it he drew from outside, clearing up Edwin Lon-dale's available stock.

The retailers doing outside planting have used their *Crimson Rambler*s left over from Easter in this way, thus saving part at least of their investment. A very large number of pansies are seen about town in vases and window boxes. Boston ferns in small sizes are in demand both in and outside of this city.

John F. Silson, who has charge of the McKean place, "Fernhill," Nicetown, has his houses in exceptionally nice condition. Beauties and carnations are in the shape. Among carnations he thinks well of Olympia, Crocker and Flora Hill, but his best sort is the Marquis. The plants of this variety were field-grown, and when lifted were rather small. They have done finely all winter and are now large plants still in excellent condition.

PHIL.

BALTIMORE.

The Weather.

For the week ending today (April 22) we have a record of clouds and rain, a lower than normal temperature, but no heavy frosts or destructive winds, such as have devastated other sections. The copious precipitation has replenished the springs and water courses and put a period to the most prolonged winter drought that has been experienced here since any weather memoranda have been kept. The ground will now be in most favorable condition for working and all out-of-door operations, which are behind-hand now, will go ahead with vigor. The bloom of hardy shrubs which are now in season is profuse, the winter not having had any injurious influence as in so many years.

The Market.

In the cut flower trade fairly active conditions prevail. There is a glut of callas and Harrisii lilies and more than sufficient roses coming in except good whites. Good Beauties are selling well. The supply of carnations is not much beyond the everyday requirements and they sell at prices which are a shade above the average at this particular season. Hyacinths, tulips and narcissus are overdone—especially the last, which come in great quantities from farther south,

selling consequently at lower figures, and supplanting other flowers. Just now heavy shipments of peonies are coming from near Richmond, Va.

There are some shippers in evidence now who do not see the market to any great extent while flowers are scarce. Their supplies and the heavy stuff from the South tend to overdo the capacity of the trade to take all up. But, as usual at this season of the year, good stuff is in request and any disappointment in the market is due to the excess of mediocre flowers and to the causes indicated above, not to any falling off in the customarily healthy demand. R.

BOSTON.

Trade Conditions.

Surely the general run of business has held up remarkably ever since Easter. There is now a good supply of everything coming in except possibly bulb material, which is getting out of season. But everything cleans up fairly well except Easter lilies, for which there is not enough call to use the coming crop. In my capacity as salesman I do not like to be asked about prices, but being a sort of "Lord High Everything Else" on a small scale, as a reliable reporter I must confess prices are not what salesmen like. It is not so much a question with them what prices were as whether goods were actually sold or not. A heavy buyer can expect to come to the city just now and boss both ends of a transaction between himself and any wholesale salesman. "The melancholy days have come, the saddest of the year."

Various Notes.

Before our long rain (seemingly the longest in history next to that of Queen Victoria's) signs of spring were few and scarce. But "wait till the clouds roll by," "when the mists have rolled in splendor from the beauty of the hills," and spring is here. The increase in the length of the day is very noticeable to one who is "up with the lark in the early morn'g"; the grass is smiling up at you, buds bursting, crocus blooming, and the robins are on hand to superintend the whole thing.

Boston's Public Garden is a busy place. The plan is to beat all former records. The trees are getting their annual discipline, the bulb goods are up and coming, and at the city greenhouses in preparation for coming displays in the different city parks are 20,000 rose bushes, 30,000 lilies, 6,000 rubbers, 1,000 magnolias, 1,000,000 pansies and a countless array of other plant life.

By courtesy of Mr. Sutherland I was admitted to the work rooms of the new Koral florist letter of which he is sole selling agent. The proprietor, Mr. Alden, who gives his wife full credit for the invention, tells me he was formerly foreman for the Boston Letter Co. until the possibilities of his wife's idea became impressed upon him. Therefore the new letter is strictly of Boston birth.

The peculiar silk of which the letters are made is first taken to a large paper cutter and cut into strips about three-fourths of an inch wide. These strips are run through a wringer-like machine a half dozen at a time, which seals each edge with half circles an eighth of an inch across. A very simple sewing machine attachment folds as many of these scalloped strips as is desirable, lengthwise over a wire, sews them on solidly

as fast as any one will run the machine, and turns out a finely finished product by the roll, resembling chenille, and used for the same purpose. Several pairs of deft hands are even now employed in heading this product into block and sort letters and other floral designs, and the trade generally is learning the desirability of its lasting qualities on funeral designs after being placed in the cemetery.

A false prophet is false profit indeed, so we will cast no horoscopes, but even the largest business concerns inevitably have a small beginning, and "there is always room at the top."

N. F. McCarthy's auction rooms are overflowing with stock for sales on every Tuesday and Friday until July 1, with the exception of April 19, which was postponed one day on account of the holiday. He has issued a magnificent catalogue of hardy roses, rare evergreens, rhododendrons, trees, shrubs, etc., to be sold during the present month. It is finely illustrated and lists an immense amount of goods.

James Salter, from Mr. Zriehel's working force, has accepted a position on a private place at Manchester-by-the-Sea.

At the risk of being accused of dealing in ancient history I might say that after all the Easter clouds rolled by it could easily be seen that while it probably was as successful a season as ever was known here, still everyone would have done very much better under better weather conditions. The trade ran to flowering plants heavier than ever, especially to azaleas and other high priced goods. Lilies seem to be getting too common for the best class of trade. J. S. MANLY.

ST. LOUIS.

The Market.

Trade reports have not been very encouraging the past week. There was plenty of stock in the market until the last day, Saturday, when roses all of a sudden became scarce; plenty of them were sold at job lot prices up to Saturday, when the price suddenly went up. There was very little retail business and it was only the outside shipping trade that helped the wholesalers to clean up some of the glut. Select Beauties have been scarce and have been selling as high as \$3 and \$4 per dozen. Other roses are fine and range from \$4 to \$6 per 100 for extra select. Mixed lots were quoted at \$2 and \$3 per 100.

Carnations have been more plentiful the past week than at any time this year, they being rather a glut at times. At this writing, though, they seem scarce, especially white, which are in great demand and sometimes bring the price of fancies. Price on general stock in large quantities is \$1 and \$1.50; fancies, from \$2 to \$3 per 100.

Violets are growing poorer and smaller. A great many are coming in; they stand at 20 and 30 cents per 100.

Bulb stock is slow; there is very little demand for it. Valley is about the only stock in this line that seems to sell; \$2.50 and \$3 per 100 is asked for it. Sweet peas are coming in fine now and seem to sell better; 75 cents to \$1 is the price just now. Another week of them will make a great difference in the price. Southern lilac is coming in now, but is received in bad condition and hardly express charges are made out of it. There are no ferns in the market and the scarcity of greens still continues. Smilax is

also scarce at 18 and 20 cents per string. A great many of the florists are compelled to use galax leaves for backing.

Notes.

Edward M. Tesson, father of Robert F. Tesson, of Ellison & Tesson, died last Wednesday at 6 o'clock of throat trouble. The funeral was held Thursday morning from St. Ann's Church and was well attended by the florists. The floral decorations were beautiful. The family have the sympathy of all the florists.

Poor Tom Carroll, who left St. Louis about two years ago to try to recover his eyesight, returned last week to attend the funeral of his wife. Hard luck has followed Tom for some time. He is stone blind and has no way of making a living and he is surely an object for charity.

Mrs. F. J. Fillmore has been sick in bed for some time, but from last reports is improving somewhat.

At Kuehn's the past week was seen that fine pink carnation, Mrs. Nelson, sent out by E. A. Nelson, of Indianapolis, Ind. Nothing like it has ever been seen in St. Louis and we can safely say that it is the finest pink carnation yet. It has all the requirements, stem, calyx, color and keeping qualities. Mr. Nelson surely has a treasure. Mr. C. A. Kuehn will handle the stock for Mr. Nelson.

The weather has been very cool the last few days, which has had a depressing effect on the plant trade at Union market. The market is fairly alive with plants of all kinds, but very little business will be done in this line until the warm weather sets in for good.

Charles C. Connon, of Webster Grove, Mo., is a candidate for mayor of Webster. Mr. Connon's friends among the craft are confident of his success.

Mrs. H. G. Berning, who has been ill for the past two weeks, is reported somewhat better.

Bowling.

Eight members were present at the bowling club Monday night, and from the scores it will be seen that the rolling was poor. A few weeks of steady rolling will show a great improvement. The scores were as follows:

	1	2	3	4 Total.
Kuehn	170	138	163	471
Weber	147	139	152	438
Ellison	152	148	149	449
Kung	148	137	131	416
Bowling	132	131	138	401
Adels	157	147	129	433
Young	119	129	142	390
Edies	87	108	74	269

Pan-American.

The Missouri commissioners to the Pan-American Exposition at Buffalo are all in St. Louis making preparations for shipping the various exhibits to Buffalo.

Mr. P. M. Kiely, of our city, was appointed agent for St. Louis to furnish the Missouri exhibits at Buffalo with such fruits from this part of the state as may be needed from time to time.

The Missouri State Horticultural Society, which had charge of the state exhibits at the World's Fairs at Chicago and Omaha, is co-operating with the commission at Buffalo. J. J. B.

LARGE GLADIOLUS BULBS.

Among the many interesting items in your most excellent journal I have read with pleasure the articles on gladiolus. That "big" corn reported by Mr. Cowe made me feel like telling of my experience with another "big" one. Two years ago in a mixture bought from Crawford & Co., Cuyahoga Falls, I noticed a very large, coarse looking "bulb" of some three

W. J. Lawrence, President Toronto Florists' and Gardeners' Association.

or more inches across. Planted that season, it threw up five grand spikes of flowers of a beautiful fleshy pink, of large size and good substance.

When I lifted it in fall it had increased seven-fold, each of the seven corns being two inches to three inches in diameter. One of these seven last year gave an immense spike of flowers, the lower two buds breaking into one flower, which in size made a mere microbe of anything in the Child-II or any other of the big things I have yet seen. Unfortunately it had been given to a neighbor, and I thus lost the opportunity of trying it out. E. J. L.

London, Ont.

CHICAGO.

The Market.

Market conditions are rather better than last week, the supply having lessened and the demand increased somewhat. In fact, conditions are very satisfactory for the season, though ruling prices are hardly up to the same time last year. Though there is a good deal of stock in the market, there is none too many good roses to meet the shipping demand, and prices on this grade hold up to \$5 and \$6. From these rates prices shade down through the various qualities to \$2 for the poorest. In Beauties the best bring \$3 to \$4 and from that down to 75 cents.

Carnations still hold their strong position and are \$1.50 to \$3 for good and occasionally some fancy sorts bring \$4, while again Scotts has been sold at as low as \$1.00. Lilies are plenty and are slow movers at from \$4 to \$6, with some sales of extra at \$8 to \$10. Tulips, etc., are slow, but are moving rather better than last week.

Club Meeting.

At the meeting of the Florists' Club last Friday evening the attendance was light, as the secretary had overlooked sending out the usual notices. But there was a quorum and some business was transacted. The transportation committee was instructed to issue a general invitation to the florists in Chicago and the west to participate in the trip to Buffalo next August and to endeavor to learn definitely how many would join the party, so the club would be in a position to get the very best possible terms and accommodations. The secretary was instructed to request Messrs. Hawkes, Swenson, Klehm and Kennicott to have their essays ready to read at the next meeting, to be held May 2. The subjects to be covered are hardy plants by the first two and paeonies by the last two.

Various Items.

Several of the down-town retailers have joined forces against the street men and as a result an ordinance was introduced at the meeting of the city council last Monday evening which, if passed, will no doubt keep the flower sellers off of the streets, as they will be "kept moving," and but little business can be done while "moving." The ordinance was referred to the judiciary committee, and as there is some little political influence backing it the street men may soon have an opportunity to take a vacation. But, of course, much depends upon whether counter influences are set at work or not.

If the ordinance goes through it will cut off an outlet for the second and third grade stock and may seriously affect returns from this stock. One commission house looked up their last Saturday's sales tickets to see what propor-

tion of their sales were for the first grade. They found that out of 1,000, 75,000, 70,000, and 82,000 were for the first grade and 25,000, 20,000, and 18,000 for the second and third grades. They say that many of the street men think that several barrels of flowers are thrown into the dump.

The Pochmann Bros. Company is now fully organized, with John Pochmann president; Adolph Pochmann vice president, and August Pochmann secretary and treasurer. The firm will soon build three houses—Nos. 306 and 310, and No. 8X306.

Wedland & Risch are preparing to move into their larger quarters in the basement of the building they are now in and are having them fitted up in the shape. They will then have the outfit of two more large growers. They have broken ground for the erection of new houses at their place in Evanston.

E. C. Amling has absorbed the space formerly occupied by George Piegras, and now occupies the entire floor.

A shipment of trailing arbutus has arrived at Kennicott's.

We have heard of no damage to florists by the storm on Sunday, though the wind was certainly strong enough to endanger weak houses.

At O. J. Friedman's last Saturday evening we noticed a very attractive table centerpiece arranged by Joe Curran. It was circular in form and filled with valley inter-perched with cathevas.

P. J. Hauswirth had a dinner decoration for a college fraternity last Friday evening, and the society's colors being yellow and lavender he used daffodils and violets throughout. The bouquets contained a single yellow narcissus and several violets, the latter being wired to keep them in position.

The daily papers are manifesting much interest in the fact that a "Century Plant" is about to bloom in the conservatory at Washington Park.

At Rogers Park, Henry Phillip is building a range of 60,000 feet of glass.

Bowling.

After the last club meeting a few games were played and the scores follow:

Wintersson	151	17	44	139	130	132	105	134	AV.
Grand	148	192	155	149					153
Hauswirth	114	142	124	158	172	132	132	150	136
Kennicott	127	111	125	94	162	114			118
London	124	93	106	129					118
McGowan	124	135	106	83					112

It was decided to call a meeting at an early date and inaugurate a series of games to decide the membership of the team to represent the club at Buffalo.

SAN FRANCISCO.

The Market.

Easter trade was good with most of the stores, the only kicks being made by beginners; the old houses did the best business. The weather was splendid and cut flowers were plentiful with the exception of lilliums; they were very scarce, many stores only carrying a few dozen while some had none at all. Trade since Easter has been quiet at most stores and will perhaps remain so until our President McKinley visits us sometime in May. Stock is becoming very plentiful, outside roses are in abundance and prices are taking a downward turn.

Sweet peas have been in market the past two weeks and are splendid in quality.

Prices: Beauties, \$1 to \$2; Brides, Maids, Kaiserins, 25 to 50 cents; Me-teors, 15 to 50 cents; Cecil Brunners,

10 cents; Perles, 10 to 25 cents; Carnots, 50 cents, Liberty, \$1 per doz. Carnations: Crocker, 35 to 50 cents; mixed fancy, 25 to 50 cents; Hill, 20 to 25 cents; Scotts, 161 to 25 cents; Portias, 124 to 20 cents per doz. Harrisii, \$1 to \$2.50; violets, 75 cents; sweet peas, \$1.50 to \$2.00; callas, 50 to \$1 per 100; valley, 25 cents per doz.; asparagus, 10 cents; smilax, 5 cents.

Various Items.

Jacquetten has sold out his business to Dominic.

J. A. Nelson, a member of the firm of Morse & Nelson, Oakland, Cal., died on the 14th of March after a lingering illness. Mr. Nelson leaves a widow and one child to mourn his loss.

The California State Floral Society will hold its annual exhibition on May 16, 17 and 18, in the Ferry building, San Francisco. Exhibits are expected from all parts of the state and an effort will be made to hold a floral congress of the Pacific states during the week of the show.

C. Ferrari & Sons will erect six new houses for roses. Some fine liberties are now being cut at this establishment.

C. Hasselbacher, Oakland, Cal., is marketing some extra fine bulbs of Papa Gontier roses of splendid color.

Thomas Sheppard, 13th street, Oakland, did a great shipping business for Easter.

C. C. Abrams, Western Nursery, sold out a batch of azaleas for Easter that might be classed the finest ever seen in San Francisco. They were well done. Sievers & Boland got the bulk of them.

Sievers & Boland made the finest display in San Francisco for Easter. Boxes of valley and tulips done up in crape paper in colors were fine; also the azaleas, two in a pot, red and white, made a handsome present.

Shanahan, Powell street, had a grand display of orchids, in variety, for Easter. They were arranged on a wire stand and never failed to draw admiring crowds to his window. And such rubbernecking at his vase of Hobarts! Buyers hardly knew which to choose, the orchids or the Hobarts. J. S.

NEW BOOKS.

PLUMS AND PLUM CULTURE. A Monograph of the Plums, cultivated and indigenous, in North America; with a complete account of their propagation, cultivation and utilization. By F. A. Waugh. Illustrated, 12mo, pp. 370; cloth. Orange Judd Company, New York. Price, \$1.50.

Our American business of fruit growing has expanded tremendously in recent years, and with this expansion has necessarily come specialization. We have reached the stage of specialties and specialists in pomology. Plum culture is one of the most complicated of these specialties; and Professor Waugh is one of the best known of the specialists. The book is a complete monograph of the plums cultivated and indigenous in North America. It will be found indispensable to the scientist seeking the most recent and authoritative information concerning this group, to the nurseryman who wishes to handle his varieties accurately and intelligently, and to the cultivator who would like to grow plums successfully.

THE NEW RHUBARB CULTURE. A complete Guide to Dark Forcing and Field Culture. How to prepare and use rhubarb. By J. E. Morse and G. Burnap Fiske. Illustrated, 136 pp., cloth. Orange Judd Company, New York. Price, postpaid, 50 cents.

The forcing of vegetables under glass during winter months has taken great strides within the past decade and grown to be a business of large proportions. One of the latest vegetables to receive attention in this line is the common pie plant or rhubarb. Unlike most of the vegetables used for winter forcing, no expensive structures are required. Cheap board structures are put up and heated with an ordinary stove. In these, rhubarb roots are closely packed and then forced into growth. The resulting product is very handsome in appearance, quality and flavor. The best product is grown in absolute darkness. Mr. Morse, who is an expert gardener, gives in detail the commercial method of forcing, together with the actual cost, yield, and prices which have ruled for several seasons. In part second Mr. Fiske treats of other methods of forcing, as well as systems of outdoor cultivation.

LEGENDS OF THE LILY.

The lily is rich in folk lore and the sacred associations connected with it add not a little to its charm. It has been introduced into many religious ceremonies from the earliest time of the Hindus and Persians. In the flower lore and legends of the Greeks, Romans and Jews, the lily plays an important part.

One version of the birth of the white lily is that the Virgin Mary, on her way to the temple, plucked a yellow lily growing by the roadside, which became pure white when she pressed it to her heart. "Madonna Flower," "Lily of the Virgin," and "Fleur de Marie," names for the white lily, have reference to this legend. It has always been the emblem of purity, and it figures in the pictures of the various saints who were famed for the purity of their lives, and in nearly all pictures of the angel Gabriel, who is frequently alluded to as the Angel of the Lily.

A German tradition points to the romantic Hartz mountains as the birthplace of the white lily. Another quaint German legend tells of the transference of the lily from white to red in the garden of Gethsemane.

The lily so largely grown for Easter originally came from China. An interesting tale regarding the departure of the lily from its native soil to Japan and later to other countries is as follows:

The Emperor Chow, who reigned over the flowery kingdom 1,000 years ago, was a cruel ruler. Indeed, he often resorted to the most barbarous cruelties for no other reason than to satisfy some passing whim or mood. Finally the closest adviser of the emperor, Li Chung, grew fearful of his life.

Li Chung hid in guarded language delicately hinted upon a broader and more charitable treatment of the subjects, but of such reforms the Emperor Chow would hear none, and the suggestion only angered him to still greater deeds of violence. Feeling assured that his efforts were fruitless, Minister Li Chung became concerned as to his personal safety and forthwith began to prepare a mode of escape.

He communicated to the emperor a message he had received from the gods in which a great sacrifice of men, women, beasts and fruits was demanded. This sacrifice was to take place upon a distant island and was to bring great prosperity to the nation. This appealed to the emperor's superstitions and bloodthirsty nature and Li Chung was given full authority to carry it into effect. He obtained the finest ship in the royal fleet. He selected a hundred of the strongest young men and most beautiful young women, beasts and fowls of the finest breeds, and for the feast all the delicacies the land afforded, among them the lily bulb "Bak-lap." Then he sailed away and that was the last the emperor ever saw of Li Chung. He sailed to what we know as Japan, and the men and women instead of being sacrificed inhabited and populated this beautiful island. Some of the lily bulbs were planted to reproduce their kind, and in this way the lily became common in the island.

TOMATOES UNDER GLASS.

Will someone kindly answer this through THE REVIEW? I have made raising hot house tomatoes a specialty for three years with the following success, the ground used being taken side by side from same place fresh every year.

The first year I used only fresh horse manure in preparing the soil and had strong, healthy plants, with no disease, that yielded about 11 lbs. tomatoes to plant for the season. The second year I used only cow manure with bone meal for top dressing and had some diseased plants; yield about 7 1/2 lbs. tomatoes to plant for the season. The third year I used cow manure in preparing the soil, with cow manure for top dressing. Plants were diseased much earlier in the season with more diseased plants, leaves of plants becoming brown spotted, of a sickly color, stems brittle, breaking like glass; yield about 5 lbs. tomatoes to plant during season.

What manure would you advise me to use and what is the cause of the disease?

B. K. HEDRICK.

BUFFALO HOTELS.

The Buffalo Florists' Club have undertaken to arrange for the accommodation of all visitors who expect to attend the convention of the S. A. F. in Buffalo.

While it is true that hotel rates will be higher than usual, there are any number of apartment houses that have been fitted out for the accommodation of Pan-American visitors; also private houses in the residence portion of the city, where rooms can be had for \$1 and up for each person, and a morning breakfast will be served if desired, while other places will give all meals, the latter not so plentiful.

The hotel committee have a list of houses and hotels with the rates, and any person or persons wishing to engage rooms can have same secured in advance by addressing the chairman of the committee, W. A. Adams, 43 Main street, Buffalo, N. Y., stating whether they want accommodations at hotel, apartment or private house, with or without breakfast, the number of persons, and desired accommodations together. It will be necessary to inform the committee early, as they have the refusal of several apartments for the week, where from one hundred to one hundred and fifty can be accommodated in one place.

It will be unnecessary to communicate with W. J. Stewart, secretary of the S. A. F., as the executive committee look to the Buffalo Club to accommodate the visitors, which the hotel committee are willing to do, providing they can be accommodated.

Street car facilities are excellent, the restaurants plentiful and rates reasonable. No one will be overcharged at any place, and with the numerous hotels, apartments, and private houses every one will be taken care of if they notify the committee.

THE COMMITTEE.

GRAND RAPIDS, MICH.

Various Items.

Such weather as we have been having passeth understanding. A two weeks record shows two sunshiny days, warm, snow, rain, cloudy and frozen. Two nights the temperature was as low as 16 degrees and one florist, Bruinslot & Son had a leaky boiler.

Roses are plentiful and of good quality and the demand is equal to the supply of good stock. Carnations continue scarce, particularly white, which is hard to get in sufficient quantities to fill shipping orders. Bulb stock is about over, unless in lilies; Easter misses are coming in steadily.

The following is the history of 1000 Harrisii bought as All stock to be forced for Christmas. Of the lot, 400 never came up; of the remaining 600, 300 flowered from Dec. 20 to Jan. 10, from one to four flowers each; 200 took their time from then till Easter and the remaining 100 will be on hand for next Christmas. Shall we grow some more?

James Schols has been confined to his bed with rheumatism for the past four weeks, unable to set his foot on the ground. In the meantime Mrs. Schols attends to the business and manages things in fine shape. Mr. Schols has the sympathy of the trade.

Mr. Boddington has just paid us a two days' visit and reports trade good.

N. B. Stover of Granville reports a good Easter trade. He is rebuilding all his old houses into one range.

ERIE, PA.

During Friday evening and Saturday morning Erie was visited by the worst snow storm known in this section. The storm began in earnest Friday evening at about 8 o'clock and continued throughout the night and Saturday until about 3 in the afternoon. The wind blew from the northeast at an average velocity of about 30 miles an hour, attaining at times a speed of 30 to 40 miles.

The heavy, soft snow, driven before the gale, drifted roadways in many places to a depth of four feet, and was packed solidly against all exposed objects. Overhead wires soon grew to the size of cables, and under the weight of the heavy, clinging stuff, poles gave way and wires snapped by the dozens. Several horses were killed by having come in contact with live wires, and it was only by the merest chance that no person was killed.

Business was at a standstill; many of the stores closed at 3 o'clock on Saturday. Some of the local florists ran out of coal and were forced to burn wood, it being impossible to draw coal through the heavy drifts. In many cases the snow had to be shoveled from the houses to prevent their collapsing. The damage is widespread and we may be very grateful it did not occur Easter week.

"ERIE."

The Chicago Tribune is offering liberal prizes for the best garden and best window box in the various divisions of the city this summer. Prizes are offered to the residents of the north, south and west sides, and in each case the first prize for best garden is \$75 and the second prize is \$25. For best window box, first prize is \$15 and the second prize is \$5. If these prizes are generally competed for, it will undoubtedly result in developing a lively interest in plants and flowers.

DALLAS, TEX.—The new houses to be built this season by the Texas Seed and Floral Co. will consist of three 150x35 for roses and two 150x14 for small shipping plants. The reason for putting in reservoir, tanks and pumping machinery is that city water is high here and money can be saved by having their own water-works. The company has ten acres of American Beauty roses now in bud outside, and they are in fine shape.

OWATONNA, MINN.—L. P. Lord & Co. have succeeded Lord & Johnson, Mr. Johnson remaining working foreman. The firm reports Easter trade as at least 35 per cent better than last year, with a notably increased call for decorative plants. They increased their capacity about 25 per cent last year, and hope to add another 25 per cent this year to keep up with the growing demand.

WILLIAMSPORT, PA.—Daniel E. Gorman will soon build a new house 50x100. Mr. Gorman is the florist against whom a novel suit was brought by a neighbor who complained that the reflection of the sun from the greenhouses made his residence less desirable. Mr. Gorman will now change the angle of the roof to 70 degrees, or build a small house in front of it.

ABURN, IND.—Fleming & Haeblich have dissolved partnership. The business will be continued by W. G. Haeblich, who has purchased the greenhouses.

Plant of *Nephrolepis Wittboldii*.

“A Most Valuable Decorative Fern.”

Philadelphia, Feb. 2, 1901.

The Geo. Wittbold Co., Chicago, Ill.

Gentlemen: We are much pleased with the *Nephrolepis Wittboldii*; the specimen plant which you recently sent shows the character of the plant very nicely. Its bold heavy foliage, which is made to appear very light and graceful by the wavy edge, should make this a most valuable decorative fern, for which there is room alongside the Boston fern.

We see no reason why the plant should not become just as popular as this valuable variety.

Yours very truly,

HENRY A. DREER, Inc. J. D. E.

“The Great Fern of the Future.”

Newark, Ohio, Dec. 27, 1900.

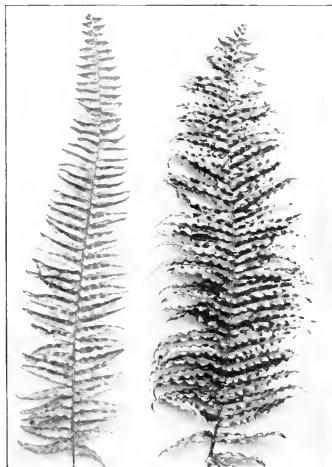

The Geo. Wittbold Co., Chicago.

Gentlemen: Please ship to me as soon as possible 300 more of your Nephrolepis Wittboldii.

The plants I received from you a short time ago are doing so nicely that the more I see of them the more I am convinced that Wittboldii is the Great Fern of the Future, and I feel I cannot get too heavy a stock.

And I know that every enterprising florist will purchase a stock of it as soon as he sees what a grand decorative plant it will make. Wishing you a prosperous New Year, I remain.

Yours truly, A. J. BALDWIN.

Frond of N. Bostoniensis.

Frond of N. Wittboldii.

Buckingham Place, CHICAGO, ILL.

KANSAS CITY, MO.

The volume of Easter business exceeded that of last year by a very satisfactory margin. The kind of weather which inclines to discourage the florist at such times and is most favorable to the umbrella man visited us on Monday and remained until Saturday morning, when the storm abated and business came our way with the force of a Texas "gun-her," lasting up to Sunday noon. As stated in my last notes we were never better supplied with flowering plants, which were most in demand, the lily taking the lead, with sales nearly double those of a year ago. Of cut flowers there was plenty, showing 20 per cent increase in sales. Very few fancy baskets or novelties were used (they are not profitable here yet), but the single plant and pans of assorted stock found a ready sale.

Dahbous stock was "par excellence," and we doubt if there were any better displays in the country than those seen at the establishments of Samuel Murray and W. J. Barnes. Much credit is due these gentlemen, both for the quality of their stock and the satisfactory way in which it was handled.

Arthur Newell gave his store a spring cleaning and made every preparation for a big trade, and he was not disappointed. A shipment of fancy carnations from the Chicago Carnation Company he retailed at \$2.50 per doz. Arthur is mourning the loss of his pet alligator, which departed this life in time to avoid the Easter rush.

W. L. Rock's new store was ready for occupancy and was well advertised. It required a force of ten hands at his two stores to handle his trade, some of them working all Saturday night at filling orders.

Our lady florists are all wearing new hats and a prosperous smile. Miss Dalley, Eleventh street, reports a large Easter trade, and says it could not have been better with her. Miss Dalley carries a fine grade of stock and believes in a generous window display. H. J. M.

UTICA, N. Y.

The florists of this city had a meeting the evening of April 18, and organized the Utica Florists' Club, with the following officers: President, Harry Mathews; vice president, W. A. Rowlands; secretary, F. E. Shaw; treasurer, C. F. Seitzer; executive committee, F. J. Baker, J. C. Spencer and William Mathews. Other members are Peter Crowe, A. R. Wilcox, Jesse Williams, Henry Martin, H. Belmont, Donald MacLean, Louis Jones, William Death, James Toomey, Charles Matthews. Meetings will be held the first Thursday of each month at 183 Genesee street.

ALL SOLD.

Please discontinue the dahlia and gladiola ads. Have sold all I have to spare. The F. R. is all right. E. HANZEN. Fond du Lac, Wis.

The Finley Lawn Mower Company, Joliet, Ill., send us some of their new printed matter illustrating their 1901 model of the rotary lawn rake. It is very attractively gotten up and the letters of recommendation are remarkably strong, representing every section of the country. This rake promises to be as indispensable as the lawn mower.

THE GOOD & REESE CO.

The Largest Rose Growers in the World.

SPRINGFIELD, OHIO.

KALAMAZOO, MICH.

Since Easter trade conditions have been in every way satisfactory. Roses have been in good demand at fair prices. Carnations are becoming more plentiful; the demand is still ahead of the supply.

The craft here are all ready to start planting out carnations just as soon as weather will permit. The number put into the field this year will exceed that of last year. The Van Boelhoe Bros. will this year bench a large quantity of last year's introductions, which they have been testing and found to be suitable to their soil. Ethel Crocker has proved with them to be one of the best, possessing a good constitution, exempt from stem rot and rust, a continuous bloomer and a good shipper. Lawson has quite come up to its recommendation, and will be given a good deal of bench room. Marquis is a grand flower, strong grower and healthy, but both here and at the Dunkley establishment it has proved lazy; they will try it again. Peru is with them one of the best whites, very prolific and a good keeper. Morning Glory also has done well, and will be planted largely in the place of Daybreak. Among the standard sorts Joost is exceptionally fine and has entirely displaced Scott.

The celery men are very active preparing the land for the early crops of Kalamazoo's famous product; a few fields have already been planted, but the cold of the past few days has killed them, and they will have to be reset. The hotbeds are filled with millions of young plants ready for setting in the open field as soon as weather permits.

Visitor, Mrs. Foster, Plainville, Mich. Hines.

HARTFORD, CONN.

Easter trade averaged good considering the existing circumstances, it being the rainiest Easter week on record. Stock of all kinds was plentiful, excepting carnations and prices were about the same as last year. In the plant line azaleas and lilies were in great demand.

Carnations were very scarce and but few good ones could be had. Some very fine Brides and Maids were in the market and found ready sale. Violets were in abundance as were tulips, daffodils and mignonette. There was a noticeable increase in demand for plants over that of last year.

The receipts perhaps were a little ahead of last year and had the weather been more favorable the receipts would have been 25 or 35 per cent more. Most of the dealers had stock left over.

J. F. COOMBS.

ASHLAND, KY.—Wm. H. Carp is building a new house 18x60.

WIRE WORK.

C. A. Kuehn, 1122 Pine St., St. Louis, Mo., Manufacturers of the Patent Wire Clamp Floral Designs. A full line of supplies always on hand. Write for catalogue.

We are the largest manufacturers of wire work in the west. McKellar & Winterson, 45, 47, 49 Wabash Ave., Chicago.

Reed & Keller, 122 W. 25th St., New York, Manufacturers of Wire Designs.

E. H. Hunt, 76-78 Wabash Ave., Chicago.

ROCHESTER, N. Y.

John W. Spencer, of Cornell University, has finished his course of lectures which he has been giving in the public schools, under the management of the Woman's Union.

His talks were upon the subjects of flowers and gardening, and proved very interesting to his listeners. The Woman's Union will hold a flower show in the fall, similar to the one which was such a success last year, and it will probably be held some time in September. The children will raise the flowers at home, and valuable prizes will be awarded the successful competitors. The classes to which awards are to be made include the following:

1. For best cut flower display grown by any public school pupil.
2. For the best display of vegetables grown by any public school pupil.
3. For best display, grown by pupil, of cut asters, coreopsis, morning glory, dianthus, marigolds, nasturtiums, petunias, pilox, bachelors buttons, zinnias.
4. For the best box or pot of plants raised from seed by a boy.
5. For the best box or pot of plants grown from seed by a girl.
6. For the best display of cut flowers from a bed in school garden, planted and cared for by a grade.
7. For best arranged bouquet of cut flowers.
8. For best display of cut flowers grown in school yard.
9. For greatest improvement in school yard.

"RETURNS ARE SPLENDID."

In sending renewal order for their classified ad under "Dahlia's" in the REVIEW, under date of April 20, Messrs. Lothrop & Higgins, East Bridgewater, Mass., say: "Returns are splendid."

CAN'T DO WITHOUT IT.

Enclosed find \$1 in payment for another year's subscription to the Florists' Review, which I cannot do without. W. L. LOUDON.

Mt. Vernon, Ind.

WATERVILLE, ME.—H. R. Mitchell & Son are building a house 21x110.

SAN FRANCISCO, CAL.—J. Kessel is building two fern houses 17x125.

CLOVER SEED.

C. A. King & Co., Toledo, O., say under date of April 20:

"Season is almost over. It has been an interesting one. Prices have averaged 1 higher than for several years. Stocks of old seed are very small and less than for several seasons. Receipts here have been small, only 70,000 bags against 116,000 last year and 200,000 from the enormous crop of 1897. Exports have been the smallest since 1896. High prices checked them. October means the new crop. The prices of that will fluctuate as the guesses vary upon how the new crop will turn out. It will not average as low as some recent years even if the crop should be a good one.

A NEW VARIETY.

There was a rare and beautiful exhibition in the city council Monday night, as those who cast their eyes over the radiant banks of roses and lilies avow. It seems impossible that those who saw and rejoiced in its glories should not feel moved still further to improve the annual exhibition hereafter by eliminating that rare American orchid, the species Ward Heeler of the genus Aldermann, which at various places reared its bulbous head and prehensile stemmons from among the other flowers.—Chicago Daily News.

WEST ANDOVER, MASS.—E. Flynn, formerly of Lawrence, has leased the Edwards greenhouses.

MADISON, N. J.—L. M. Noe is building a new house 20x211. Lyons & Blake are building two, one 10x150 and the other 18x150.

ROCHESTER, N. Y.—H. E. Wilson has just completed a new greenhouse building connecting the old room with a new four-story building 20x50 on 100th Ave. The new house is an even span open frame structure, and is divided by glass partitions into three sections, two of which will be devoted to roses and one to palms. The store will be lighted by electricity and fitted up in thoroughly modern style. The additional greenhouse gives Mr. Wilson a total of 50,000 feet of glass. He has a down town store at 85 East Main St.

WE HAVE received from Messrs. I. Boehmer & Co., Yokohama, Japan, a copy of their wholesale catalogue of Japan bulbs, plants, trees, etc. for 1901-1902. It is freely illustrated by engravings by Japanese artists in color and is very attractive.

GREENSBURG, IND.—Hedges & Clark will build two houses this season.

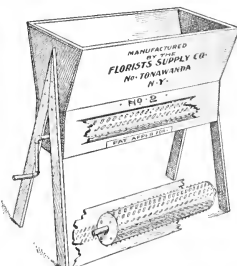

ALBANY, N. Y.—W. C. King & Co. have purchased the business of Geo. H. Grey.

ST. MARY'S, PA.—The St. Mary's Green House Co. are adding two houses 17x100.

CAMBRIDGE, MASS.—The wife of Robert Cameron, of the Botanic Garden, died April 14, after a long illness.

NEW BEDFORD, MASS.—E. Chamberlain has leased a store on Purchase street and will start in business for himself May 1. He was formerly with Wm. Pierce. The latter has turned his business over to his son, W. P. Pierce.

Used all over the United States....

THE RETAIL FLORIST.....

Wedding Decorations.

The innumerable forms of church floral decorations are sufficiently interesting for a longer series of articles, but we can only now deal with the most important points. The few rough sketches we present this week must be considered from a framework point of view; we hope to be able to again present them from a finished side. It must be remembered that a frame is but as a foundation, the superstructure depends on the artist.

One of the most difficult problems for the decorator is how to fasten a stand in the pews without defacing woodwork or obstructing the passageway. We have a stand which fits snugly in the corner of the pew; one screw eye in the floor holds it in place. Any of the stands shown can be put in the pew; a screw eye under the seat will make secure from tampering fingers or superfluous adipose. Don't use wire in fastening bunches of flowers on the end of pews; a stout rubber band or baby ribbon is best. It does not always require an immense amount of stuff to make an effective decoration; a plant or cluster of greens well placed and daintily finished is a pleasure to look at.

Now, in regard to house decorations, be it for the wedding or the reception, somewhat different rules apply. Color lines need not be so severe; that is, we mean more colors can be used in a house than in church, but in all cases the greatest harmony should prevail. You have different rooms in a house and each should be made a feature by distinct treatment and different color. Your greatest effort should be made in the ceremonial room. The banking of mirrors, unless you have extra fine material, had better be left alone; the custom is dying out any way. If you can untwist and train a Crimson Rambler or two on something similar to the wire shown it will show off better than all the stiff banks of greens you can manufacture. As mentioned, you can cut off the blooms and tie on any color desired. Golden Gate, De Watteville, Carnot, Bride or any of the light colors will be most acceptable roses in the principal room, and the next to it should be something brilliant, such as Liberty, Meteor, Brunner or Beauty, to emphasize color effects.

Spring flowers, such as tulips, daffodils, lilies, etc., can be made very attractive all in one room. A room fixed up in one or two colors in carnations is apt to be more admired than the roses. Combinations can be made, of course, with almost anything, but the arranger must not be color blind.

At extensive weddings in New York a colonnade of Greek or Roman pillars of plaster of paris or stucco are often used; the pillars are usually about 8 to 10 feet in height and 1 to 1½ feet in diameter. Roman garlands of roses, or preferably climbing roses, naturally entwining the pillars, make them very impres-

sive. Ribbons are out of place on anything like this; delicate vines or garlands of flowers are the only fit embellishments of the classic pillars of the past. We don't wish to undervalue ribbon, but it does not belong on everything. There are beautiful forms of decorative work where ribbons form a principal part, that is on a background of, say, white or yellow bunting, with tracery of vines, immense herable or cupid bows and streamers of delicate pink ribbons, with here and there clusters of flowers to match, can be made to show up amazingly good. Combinations can be made to suit the exigencies of the case, or the imagination of the artist; some very good examples of this kind of decoration

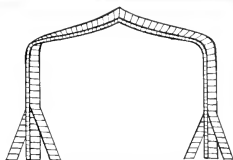

Fig. 1.

were done at McKinley's last inauguration, which we attended for the purpose of writing up for this department; a pressure of other matters, however, has prevented us from giving our impressions, but an affair like this is always valuable. We shall discuss it during dull times.

But again to wedding decorations. The use of flowering plants is most appropriately pleasing in the house, and you want to tell your customers the placing of them in vases in conspicuous places is apt to give the impression that they have always been there, and people desire to create this impression. The less artificial (we mean "rigidly fixed up" or too apparently fixed) your work looks all the better. A great mistake is made by even the best artists in having some of the best parts of their work too low down. It is certainly absolutely necessary that pots, etc., should be covered, that a group of plants should have a finished look; but we should remember that when a room gets jammed with people, as it does invariably, your decorations are lost if they are not above the heads of the people. Keep your best work where it can be seen at all times.

Remember, too, in a house there is less call for the spectacular. Some great paintings must be always viewed from a distance. Your work in large buildings must be on the same principle as the "impressionist" picture, but the work in the house must bear close range criticism only, therefore it must be of a more polished type.

We will deal exclusively with bouquets next week. In the meantime if you have

no question to ask, send it along. We very frequently hear from the subscribers of novelties. The great trouble with growers is that they are not about to send a half dozen of their pet-rose vines, and then photographed and have the growers put in with their ads. We would be pleased to assist in better presentation of deserving flowers or plants.

EVERY

HELPS IN DECORATING.

We have roughly sketched a few wire frames and devices that are useful in arranging large decorations. These are made by Reed & Keller, of New York, whose address will be found in the advertising columns.

Figure 1 represents a very substantial arch made of bolted sheet iron. It is made so that when not in use it can be taken apart and stored in a small space. It is usually made ten to twelve feet high but can be extended. It is suitable for church, house or ball decorations and can be made the principal feature of even the most extensive job. With simple wire hooks growing plants can be suspended from any and every part. When covered with growing plants of Adiantum Farleyense and a vase or two of choice flowers it gives a magnificent effect.

Of course there are numerous ways of "making it up." One very effective way is to cover it entirely with climbing roses. It is merely a matter of price, material and "know how." A bell or set of bells can be suspended from the center. One thing about this arch is that there need be no fear of its falling over, and the shape is a matter of choice.

Figure 2 is a wreath canopy for a house wedding. The wreath is of the crescent shape, very wide frame and from four to six feet in diameter, the top of wreath inclining forward to form a canopy effect. There is a very large bow at the bottom of the wreath. The iron pipe stem is eight feet high with a heavy rest at the foot.

This design can be made up very handsomely. The wreath should be filled full with but one color rose, the bow of a

Fig. 2.

contrasting color. Sometimes it is made of flowers on wire work but most often is of sash ribbon. Very bright colors are usually used in this design to most surely avoid funeral effects.

A very popular design now is the shell canopy. It is a wire frame in the shape of a sea shell on a pipe stand like the preceding. It "makes up" very effectively and is full of meaning.

Figure 3 is a very simple steel wire frame to insert in a bush of Crimson Rambler roses and to look in a mirror. Hide the wires with the foliage and bend them to any shape desired, cut off all

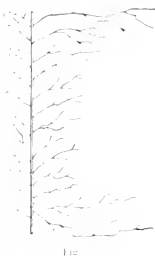

FIG. 3.

the Rambler blooms and you can then attach several hundred roses among the foliage in green glasses of water. Avoid stiff or formal lines. Make it appear as if the roses were growing in profusion on that tree. Wire a few on the ends and have all the flowers face outward. This kind of wire frame can be used for arches, canopies or any kind of design. It permits the artist to copy the natural and that gives more pleasure than formal lines.

Figure 4 is a steel wire frame that will enable you to transform a corner or alcove in a room into a "bower of roses." Fasten at the floor and again at the top. One of these was recently covered with American Beauty roses. Just fasten them on as if they were growing, using short ones at the bottom and long ones at the top.

Figure 5 is a six to nine foot skeleton for a rose tree. The iron pipe is in two pieces and extendible, the upper length being held in position by the set screw when in use. The top is of steel wires and it can be made finely effective for avenue work. Smaller sizes are used for table work. The stem and wires are first covered with rose foliage, from

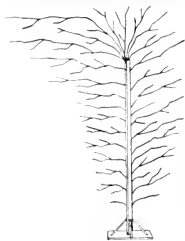

FIG. 5.

50 to 250 roses of one color being used on the wires. Any small leafless tree in a plant pot can be used instead of above for a frame.

Figure 6 shows a very handy stand to hold a flowering plant, fern, vase or arrangement of flowers to place in groups of plants or at ends of pews down the

church. The iron pipe standard is six feet high with wire pot frame on top.

Figure 7 shows a fancy nickel plated counter stand to hold "showers" or other bouquets. It can be made taller or shorter by means of the socket and set screw.

CARNATION NOTES.

Diseased Carnations.

The plants sent for examination by L. U. showed two kinds of disease and both in a very advanced stage. The White Cloud plant was badly affected with bacteria and if the whole bench is as bad as the plant sent there is not much use of bothering with them any longer. Better burn the plants.

There are many ways in which this disease can be brought on, such as over-watering, over feeding and sometimes impoverished soil, or in fact anything that tends to weaken their constitution. Plants that are kept growing steadily are not likely to take the disease. When a plant shows this disease you may be sure there is something wrong in the treatment and if it is allowed to get a good hold on a plant it is hard to get rid of and seldom do the plants fully recover from it; they do not have the vitality necessary to

FIG. 6.

allow them to make a good, strong growth.

Some varieties are more prone to take this disease than others and special care must be given to the watering and feeding of those varieties from the time the cuttings are put into the sand until the plants are through blooming eighteen months after. There is perhaps nothing better than an occasional dose of lime or soot during the blooming season. The lime keeps the soil sweet and soot is one of the best foliage foods we have.

Our experience with this disease has invariably been that the young stock apparently outgrows it and looks healthy and clean until the dark days of the following winter when it reappears unless extreme care is exercised by the grower. This is where selection of cuttings plays an important part. We never propagate from plants that show signs of this disease and if any of the young plants take it we dump them at once. To try to doctor up young plants of standard varieties is wasting time and money, because even if you do succeed in restoring them to health in a month or two you will be just that much behind those that were always healthy; and so at best you can only expect fair results.

The plant of Crane had on it a disease best known as "purple-joint," but as I have had no experience with this disease I can give no light on the subject of eradicating it. I have heard other growers say that the Bordeaux mixture and also

the copper solution had proven effective in keeping it in check. Perhaps Mr. U. would do well to try one of these unless he is willing to do the best thing of all, which is to burn the affected stock and buy new stock from some one whose stock he knows to be clean and healthy.

FIG. 7.

There is no time to doctor young stock now, but get a new start at once and get the stock planted as soon as you can. If Mr. U. has any faith in the indoor culture this would give him an excellent opportunity to get the benches planted early. Jubilee, America and Mrs. Bradt certainly do better with us grown this way and no doubt there are others that would appreciate it as well.

Planting Out.

You should be in the midst of your planting now unless the weather has permitted you to finish before this date. In our section from April 20 to May 10 seems to be the very best time for planting carnations; the weather is usually mild between those dates and the young plants take hold quickly and get down to growing before the hot and dry days and nights of summer come along. This year we had a spell of fine mild weather from the 9th until the 18th of April, and many growers had a few thousand young carnations in the field when on the 18th a heavy snow storm came along and the thermometer stood about 30 degrees several nights in succession and not many degrees higher during the day. While this did no serious damage yet I am sure it did no good either and the young plants that are being planted now right after the cold spell will be much better off. But it is rather late and no time should be lost in getting them out.

FIG. 8.

Shade.

We have just put a very light shade on our cut bloom houses, as the sun has suddenly developed a good deal of strength and the red varieties will not bear it many days without losing their brilliancy and later on their size and freshness. Many of the pinks also lose that brightness which we all admire so much. I do not like to shade until it is really necessary, and then a very light shade is sufficient until the weather is quite hot. Plenty of air and water will

help more to keep up the quality. A much of some loose material will help to keep them from drying out too much, but more care will be necessary in the watering.

Try to cut all your blooms in the morning before the sun is hot. They are fresher then than at any other time and the color is also better; if the open blooms are left on the plants through the day the sun takes the color out of them and gives them that washy appearance.

A. F. J. BAYR.

A WEDDING BOUQUET.

We present herewith an engraving from a snap-shot photograph of a wedding bouquet arranged by Mr. Louis Rus-

sell, the better. I will here step aside to thank the originators for their skill and labor which has made it possible for us to enjoy their beautiful creations.

There is very little to distinguish the private gardeners' products from the commercial florists' products, except quality, which is in favor of the florist, owing to modern improvements and labor facilities. When we meet together let it not be for character analysis, not for humdrum, but for facts as they present themselves from time to time. There is one fact that presents itself in a forcible manner to me. From the first year of the chrysanthemum rage numerous plants that you could have found in private collections previous to the advent of the chrysanthemum have now en-

gaged? Surely, though there is enough latent talent of the florist once landed that would supply an inexhaustible source of information.

A HOT CORNER.

I have a hot corner enclosed on the north by the walls of the main house and on the east by a wing of it. This corner has a south and southeast exposure and is an excellent place to grow material requiring heat and shelter from strong winds.

Moonflower vines are used to cover the walls, the plants being well started under glass before planting time in order to have them long enough to reach above or nearly to the plants placed in front of them when set out. *Passiflora Florida* is also used as a wall cover and is the finest bloomer among the *passifloras* I know of.

Next to the vines at the back I use *Hibiscus rosa-sinensis* and tall standard dahlias, standard lemon verbenas and lantanas, finishing towards the front with bush forms of abutilons, lantanas, heliotropes and crotons. Geraniums, ageratums and verbenas may be used to finish the front.

All of these plants have been started under heat and in bloom, or nearly so, by June 10 to 15, which is as early as they may be put out here with safety. Frequent drenching with the hose destroys any tendency to red spider.

W. C. EGAN.

TOMATOES UNDER GLASS.

Replying to the inquiry of B. K. Hedrick in the last issue of the REVIEW would say: Your correspondent's trouble with disease on his tomato plants is a serious one. I have heard it claimed, and apparently with good reason, that no disease appears in a house of tomatoes, the spores will remain in the house and the trouble will get worse with each succeeding year until finally profitable tomato growing is out of the question.

It is claimed that the form of disease called *Cladosporium* is hereditary, and plants raised from tainted stock will reproduce the disease. I have noticed the disease always appears in the fall when we may have a few days of damp, close, muggy weather. The only thing to do is to keep a dry moving atmosphere and also keep your plants dry at the root during such weather.

There is little doubt in my mind that cow manure used in excess helps on the disease by inducing a soft, sappy growth, which is liable to take anything that comes along. If I could get good rotted soil I would start my plants in it without the addition of any manure whatever. In such a soil the plants would make a firm, short jointed growth, and when you have a good set of fruit, feed your plants. I prefer to use bone meal as a top dressing and liquid manure made from either cow or sheep manure.

With the best of looking after and every precaution taken it is well nigh impossible to grow a crop of tomatoes under glass from start to finish without getting some one or other of the numerous leaf diseases, not to mention stem rot, club foot, or eel worm.

With the competition from Havana and all the southern states the days of profitable winter culture of tomatoes under glass seems about over.

C. TOTTY.

A Wedding Bouquet.

sell, of the firm of W. & L. Russell, Victoria, B. C. The carnations used in the bouquet are *Flora Hill*.

This firm grows carnations very successfully, including *Lawson*, *Marquis*, *Bradt*, *America*, *Flora Hill*, etc. Their *Lawsons* have measured from 3 to 4 inches across all this last winter.

"WHERE ARE WE AT?"

[Paper read at the April 25 meeting of the Tarrytown (N. Y.) Horticultural Society by Mr. John Shore, of Harrison, a member of the Portchester Horticultural Society.]

As I learn from reports in the horticultural journals describing your meetings, the subjects on which you have had some very instructive essays I would infer that you are a society of specialists. I am not in the class of specialists but an ordinary practitioner. I have a wider scope than the specialists and wish to take advantage of that scope this evening.

I will begin by asking you a question: "Where are we at?" Are we as gardeners on the ascendancy or degeneracy? Now we hear very little of gardening nomenclature, but carnations, roses, violets, chrysanthemums and a few other specialties; then the principal feature of everything would seem to be size, the

tirely disappeared, so much so that it is only a question of time when we must awaken to the fact how little we know of plant nomenclature.

Some citizens have awakened to the fact that a number of the animals of the United States are becoming extinct and to save such have secured reservations for their protection and perpetuity. I am pleased to know there is also a reservation now established in Bronx Park where we may again become familiar with plants we once knew but have forgotten and also with plants of recent introduction.

There is also another fact that presents itself, namely, that the most instructive feature of our society meetings is the question box and the discussion or exhibits. But have the nature of our exhibits been such that what we may designate as in-significant may have their place. On these two features depend the enlargement of our knowledge as individuals, they alone can keep up the interest that will draw the members to the meetings.

In conclusion I congratulate the members of the Tarrytown Society in that they are wide awake in the interests of their society, in that they have contemplated invitations to members of other

MISCELLANEOUS SEASONABLE HINTS.

Don't Let Your Fires out.

I don't know of any more valuable hint that I can give the average florist just now than to be sure and not let your fires out. Many a hundred dollars has been lost by a short-sighted intention of saving a few dollars in fuel. There was a time when we thought we could get along without artificial heat after the first of May. For a good many years of late we have been firing till the end of May.

When I say this it is with the idea that you have a general variety of stock in one house, and there are exceptions to this. For instance, carnation houses need no fire; all they want is plenty of ventilation. If you had a house entirely devoted to zonal geraniums and there was no shade on it you could get along without fire as long as the weather was bright and plenty of air. But a whole house of one thing is the great exception with those engaged in growing bedding plants.

With shade on, which many will have applied at this date, the tropical plants which we grow so largely for our outside decoration will just stand still, and a little worse than that. The Cannas, caladiums, above all colors, and our heliotrope, fuchsias, in fact, about everything, will suffer much. So keep up your fires and ventilate freely.

Cyclamens.

This is the time that our houses are rather more congested than any other in the whole year, and it is also a time when plants intended for next winter's crop are likely to be neglected. The most careful and industrious one will do it. Do not neglect your young cyclamens, which should now be in 3 inch pots. If you shift them soon into 4 inch use at least one-third of good decayed leaf mold.

It is early yet to put them in a hot-bed and they do not want much shade. A light bench is best for two or three weeks longer, and it will be of great benefit to them to have the pot-planted in some material; coal ashes will do, but refuse hoops is better, or even chopped-up tobacco stems, for it will keep down the aphids. An attack of greenfly is most injurious and almost ruinous to them, and what is quite as bad is to let them get killing dry while they are in active growth. Smoke often and syringe every fine morning.

Chrysanthemums.

May is the month when we propagate the main crop of chrysanthemums. In addition to the cuttings from the old plants you can take the tops off the earlier rooted cuttings. They break quickly and you get three or four shoots and many of us grow them that way. The propagating bed is now cool, but these cuttings don't need heat. All they want is shading from the bright sun, and if your sand is coarse a copious watering twice a day.

Azaleas.

Azaleas that you cut back after Easter should be in a light, warm house and be kept growing. Some of the eastern growers do not believe in cutting these azaleas back so hard as we used to, but leave them about as they flowered, only be sure and pick off the flowers. I would say that if an azalea was in a good, healthy state there would be no need of trimming them back very much and they make all the more graceful plants. But if the plant is in poor health through a drying out or neglect then a severe cutting back will give the best results. And for several years the best Easter plants we have had have been those we have carried over.

While speaking of azaleas I made an erroneous statement last fall and own up to it. I said that the summered over plants being established would force better than those arriving from Europe. You would think that would be the case, but it is just the reverse. The newly imported plants are much easier to bring into flower.

Hydrangeas.

Don't neglect to shift your young spring struck hydrangeas. Give them a 4 inch and keep them under glass till the first of June. Those for early forcing are best grown in pots plunged out in the broad sun and given plenty of daylight between them. Those for later flowering can be planted out in some good, rich soil, from which they will lift with all their roots.

Smilax.

If you are going to renew your smilax bed this is about the time that the little plants should go into a 3-inch pot and be given a decent light bench, not necessarily the best bench, but not under the bench. A good, strong plant at the beginning of July means one extra string for the next year. WILLIAM SCOTT.

HEATING.

What is the best system for heating three houses, each 18x75, in a locality where the outside temperature goes as low as 35 degrees below zero and the inside temperature should be from 55 to 60 degrees? How many pipes would it require and of what size? H. C. G.

For the heating of the three greenhouses as described by H. C. G. I would advise a steam system, the steam to be furnished from a wrought iron tubular boiler of about twenty horse power placed below the floor level of green houses, and an arrangement of heating pipes which would be partly over and partly under the benches in the several houses, proportioning the pipes at about one foot of heating surface to every four feet of glass. If your correspondent will send a rough sketch showing the arrangement of benches he intends to use, the heights of side of houses, and how much of them is glass, also whether the houses are con-

nected or separate, I would be pleased to furnish you with a diagram showing the best arrangement of pipes.

HENRY W. GIBBONS,
New York.

HARDY PLANTS.

The constantly expanding demand for hardy plants has brought to many florists orders that they find it difficult to execute in a satisfactory manner, and several inquiries that have recently reached the editor of the Review indicate a rather widespread desire among members of the craft for information that will be really helpful to them.

As one correspondent puts it: "Nearly all the plans I have seen published are for an acre or more of ground, and when I get an order to embellish the grounds around an average city residence with hardy plants I have nothing but my own very limited experience to help me. Can hardy plants be used in a satisfactory manner on the average city lot, and, if so, how? If practicable, I wish the Review would give us a variety of plans suitable for different aspects. We have frequent orders to plant a corner with hardy plants. Please give us a few examples."

In response to this and other requests we have arranged for a series of such plans from Mr. John Higgins, who is in charge of the hardy plants at Lincoln Park, Chicago, and present the first of the series in this issue. At our request Mr. Higgins has made this first plan for as small an area as the florist would probably ever be called upon to plant, making the planting as full and rich as possible on the limited space. These plans are of an existing place, and to fully carry out the idea the place will be planted in accordance with these plans, and we will, therefore, be later in the season able to publish a picture showing the effect produced and at what cost in material and labor.

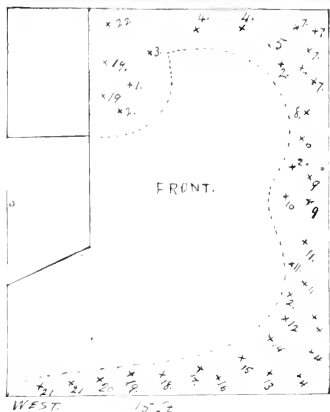

It will be noticed that native ferns are used in one corner of the front plat, and the reason for this is that the steps of the house adjoining at the south shade this corner. In the street there are several large elm trees that shade the front plat from 2 to 4 p. m., after which hour the sun reaches it somewhat under the trees. The house shades the plat till toward noon. The entrance to the front door of the house is at the north side of the plat and is not shown in the plan. What does appear is a curve in the walk and the steps leading down to the basement door. It will be noticed that a spirea is placed here to partially screen this door. The plat is separated from the street and adjoining plats by a low iron picket fence.

In the rear plat all except the bed lying along the south fence is exposed to the morning sun and part of it has some of the afternoon sun. At the east is an alley and the plat is surrounded by a 5-foot close board fence. Along the south fence the earth is shaded all day long.

Mr. Higgins' notes follow:

Beautify Your Homes.

The aesthetic crusade now being exploited in the city press is very laudable, but the movement to be effective should, like charity, begin at home. The small front yards and back yards of city residences are a far more important factor

Key to Plan for Front Plat.

| 4 Aster Novae-Angliae | 12 Campanula Van Houttei | 20 Platycodon grandiflora |
| 5 Lonicera tartarica grandiflora | 13 Helianthus autumnale | 21 Funkia undulata |
| 6 Thalictrum diotema | 14 Monarda virginica | 22 Dioscorea villosa |
| 7 Osmunda Claytoniana | 15 Hibiscus moscheutos | |
| 8 Hibiscus militaris | 16 Iris germanica | |

in the grand aggregate of beauty than the parks and pleasure grounds. There is a very extensive class of householders who, while their frontage is only the width of a city lot or two—not enough to warrant the intervention of a landscape architect—may have yearnings for the beautiful quite as pronounced as their more expansive brethren of the boulevards.

Here is a hint of what may be done in making dooryard areas presentable, using chiefly hardy perennials, because they can endure the conditions to be met in such places in a more satisfactory manner than tender plants.

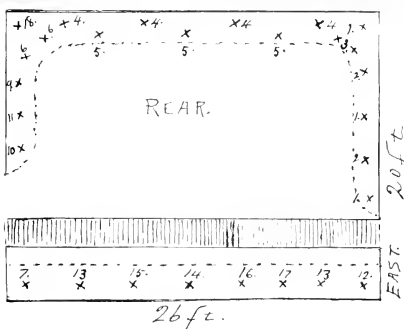

The plants enumerated will need little or no protection in winter. Species likely to be troubled by insect pests or disease or having objectionable habits of spreading by seed or runners have been excluded. In the plans it will be seen that the arrangement preserves as much as possible of the space for grass. Utility as well as artistic considerations favors this arrangement.

A few points in regard to the treatment of plants in transplanting may not be amiss. First—Never allow the roots of plants to become dry by exposure. Plants in leaf should be shielded from the light after transplanting for a couple of days or until the rootlets resume their action. By observing these precautions plants can be safely transplanted any time.

JOHN HIGGINS.

SPRINGFIELD, OHIO.

The trade will find much of interest in the growing movement of which the National League of Improvement Associations with headquarters in this city is the organized exponent. An important phase of the league's work is the linking of special opportunities with those who

Key to Plan for Rear Plat.

- | | | |
|--------------------------|--------------------------|---------------------------|
| 1 Helianthus annuus | 7 Bellanthis multiflorus | 14 Lilium tigrinum |
| 2 Ricinus | 9 Homocallis Sibboldii | 15 Tradescantia virginica |
| 3 Lychnis chalcidonica | 10 Sedum spectabile | 16 Fuchsia grandiflora |
| 4 Allium Hollyhock | 11 Delphinium sinensis | 17 Hemerocallis Kwanoo |
| 5 Perennial phlox (tall) | 12 Cassia Marylanda | 18 Menispermum canadense |
| 6 Delphinium formosum | 13 Lilium superbum | |

have business or other reasons for meeting them.

This month the league is pushing the school garden idea as carried out by the Home Gardening Association of Cleveland. One hundred thousand penny packages of seeds have recently been sold in the public schools of that city. The first season's efforts resulted in the disposal of fifty thousand packages of nine varieties of the more easily grown annuals. The suggestion is offered florists that they secure the co-operation of some local improvement association or other

organized body, so as to interest the school children of their town in a similar movement. The National League especially would suggest the few necessary details and to cooperate toward bringing the matter to a head. If the local promoters will secure the aid of the local newspaper, attractive "copy" will be supplied from headquarters.

A little time given to a careful campaign along these lines ought to result in a local boom in the trade, and the energetic man who takes up the idea is sure to find himself one of the best known individuals in the community. By suggesting and stimulating flower-shows in different schools and churches the interest will be maintained throughout the season. If a leading local photographer can be interested in the scheme, his promise to reproduce some of the most attractive displays will be an added element of interest. Altogether the scheme presents much of value to the man who desires publicity of a favorable character.

Another idea being pushed from the Springfield headquarters is the general awarding of prizes for the various vine and flower displays in front and back yards. Andrew Carnegie, John H. Patterson and other well known people have approved of the scheme by the provision of prizes in several localities. Florists can arrange the plan so that some local organization or a group of business men may provide a reasonable number of prizes to be awarded by a committee of local judges.

This plan may be elaborated according to the interest and resources of the one who is pushing the promotion. At Dayton, Ohio, the prize list has included the best appearing front and back yards, window and porch boxes, vine planting, vacant lots, and the best care of premises adjoining any of the steam railroads leading into the city. The plan directly interests a considerable portion of the community, and indirectly leads to newspaper agitation, so that the florists may reap a rich harvest of public appreciation.

The final effect should be much better than that so far secured by general notice or excursion scheme. It will appeal to the better classes in the community.

The National League of Improvement Associations offers to furnish to all inquiries and to supply in needed details in carrying out either of these two plans.

LEARNER GRACE.

CHICAGO.

The Market.

Last Sunday we were flooded from late winter into mid-summer, and mid-summer weather conditions continue to prevail at this writing. As a result the quality of all stock has deteriorated rapidly and the proportion of best grade in a consignment of roses has been very materially reduced. Though prices on first quality shipping roses are still held up to \$1 to \$6, the great bulk of the receipts is sold at much lower figures, and some very fair stock is sold at \$3, while a good deal of it goes at \$2 and the poorest in job lots at \$1 and \$1.50. And even with the greatest care in selection of shipping stock it seems difficult to give uniform satisfaction, as the weather is very hard on the stock after it is packed.

Carnations have suffered with the roses. While quotations range from \$1.50 to \$3, the great bulk, and good flowers, too, sell at \$2, while medium grades go at \$1.00 to \$1.50, and the poorest are cleaned up at any old price, if at all. Sales at 50 cents a 100 are not very uncommon. Again some extra fine Lawrence and Redhardt bring as high as \$3.

Beauties are in good supply, but the proportion of firsts is getting smaller. The best still bring \$3 a dozen, but the great bulk of the stock goes at much lower figures. We have heard of sales in thousand lots that are too sad to mention.

Liberty is gaining friends. Some really first-class blooms have been seen the last two months, and the best of the long-stemmed ones have brought prices equal to the best Beauties. Mr. Washburn, of Bassett & Washburn, says they get their extra long-stemmed blooms altogether from the grafted plants, and says it is unwise to attempt to grow it on its own roots.

Mr. A. Spencer, in charge of Peter Reimberg's sales-room, says Liberty has demonstrated that there is a place for it. Though the proportion of first-class blooms is much smaller than desirable and it is nowhere near as free as Meteor, the blooms average good in price and the demand is brisk.

The lily situation is positively painful. The buyer can practically name his own price if he offers to clean up a lot. On lilies that must be selected and packed for shipment \$4 to \$6 is asked, and occasionally more for extra select, but a good many are jumbled off at most any price offered.

Sweet peas are arriving in very good shape. We noticed some extra good Blanche Ferry at Bentley's. These sell at \$1. Cornflowers are expected soon at this place.

Trailing arbutus is arriving more freely. Kennisott Bros. Co. are receiving some large shipments and it is now offered at 10 cents a bunch.

Tulips and other bulb flowers are quiet—so quiet you can hear a pin drop. There is no more welcome visitor in the market than the buyer who wants a few

thousand tulips, and he has a whole lot to say as to the basis upon which an exchange of tulips and cash shall be made.

This is the sort of weather that a little care will make an immense difference in the value of the cut. The grower who cuts his roses every hour or so and cools them at once in an ice-cooled room will have a much larger percentage of marketable blooms than the one who cuts them but twice a day and has only a cellar for a cooling room.

Various Items.

A regular meeting of the Florists' Club will be held at the usual place tomorrow (Friday) evening. Several essays are due, and it promises to be a very interesting meeting.

Martin Peterson, who has been for some time with E. H. Hunt, will open a retail store on Division street, near Humboldt Park, in time for Decoration Day business.

Mrs. C. M. Dickinson started last Tuesday for Seattle, Wash., where she will enjoy a two months' visit with her parents.

Bassett & Washburn have been very successful with their Beauties this year; in fact, they have never before done so well with this rose.

Robert W. Schenck has been appointed commissioner plenipotentiary and gauger extraordinary to the city pumping stations, of which there are ten, with grounds ranging in size from a handkerchief up to an acre or so. He will plant these grounds and look after them, and it runs short of water will know the reason why.

During his recent visit to the city Mr. M. F. Kyle reported business good in Kalamazoo and that his son "Billy," who is with Kennisott Bros. Co., gratified him exceedingly by making him a grandpa.

The hyacinth beds are now in gorgeous bloom at Lincoln Park and the tulips are showing color. The tulips grown on the Pacific coast seem to be several days in advance of the Holland grown bulbs. The hardy plants seem to have come through the winter generally in good shape. The forsythia is already in bloom and the daffodils will be in their glory in a day or so.

The bowling series has not yet been definitely arranged for. Another meeting is to be held this week.

BUFFALO.

The Weather.

This is a latitude of quick climatic changes. A little more than a week ago we were wading through a foot of wet snow and today we are basking in sunshine at a temperature of 73, with daffodils and hyacinths in all their glory, and the robin's heart is full of joy. For the worm gets out at the same time he does. The grass is green, the cow gives more cream, the mud is gone and all nature is glad. Even discontented man is happy and forgets the amount of work he has to perform.

The Exposition.

I am afraid the daily press spread abroad the impression that the Pan-American suffered a calamity through the storm. Nothing of the kind, except

a few broken panes of glass and a few days' delay in work, and that just now is serious, as every moment is needed. I may as well report now that although there are spots here and there that are yet unfinished, the work and finishing up that has been done the past three weeks is amazing. All main roads are now covered with asphalt. Exhibits will be all in place by the end of the week. The landscape features are showing up grandly. The Music Garden with its 150 beds will soon be gorgeous with its thousands of spring flowers. On Saturday last every building and the tower was a blaze of electricity. The Goddess of Light holds her hand aloft 405 feet above the ground. She is 30 feet high, but does not look on her lofty perch bigger than Mrs. Nation—going in swimming. Now, gentle reader, to say that I have never seen such an electrical display would mean little, but those who know say that the world has never seen its equal or approaching it. But you are all going to see this fairy land, so I will say no more.

Business has been very good. Grumblers and pessimists who said that they could not see what benefit this great undertaking would be to Buffalo will be greatly deceived. All classes, from the laboring man through all grades of industry and business, are already feeling the great benefit from the increased work and the large number of visitors. Some days there have been flowers enough, but on many days there is not near enough to go round. The bedding plant and decorating business is also sure to be a big advance on any previous year, as all who pride themselves on their homes, and this is particularly a city of detached residence homes, will want to fix up a little extra and many a good deal extra.

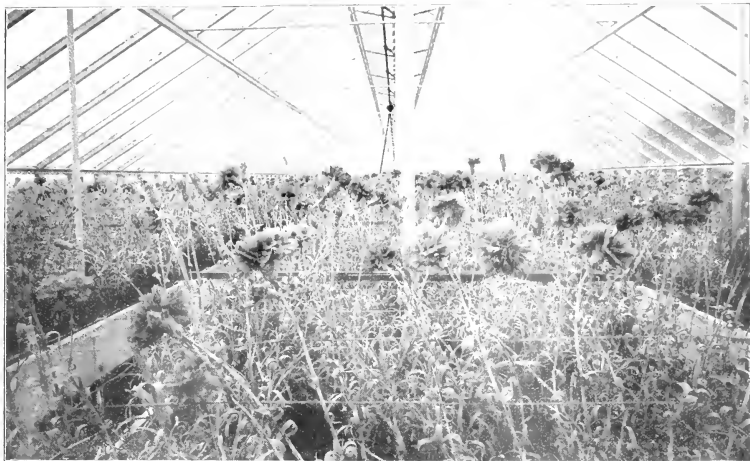

A Cute Little Thing.

My attention was called to a small paragraph in your Chicago contemporary which reads as follows:

At Easter Seed had a branch store in one of the city's best establishments, which is the first store in this direction. Buffalo so far has been free from the Greek and other cheap stores.

Now the little man who wrote this cute little paragraph knows very well that four or five years ago there was a firm had a window and counter in a store right opposite his own and that was a ladies' cloak store where they drew teeth, cut ears, dressed hair and many other "kindred" businesses. Our department houses have not yet had a cut flower department simply because they don't think they could run it at a profit, but they have sold bulbs, seeds, rose bushes, palms, bedding plants and everything else but cut flowers, so I was not the first or even the third to avail myself of the opportunity of getting near the madding crowd at Easter time.

No, it was not for information that Mr. A. penned this; it was just a little unkind and comes with very poor grace, all things considered. If a patrolman had died that day I would have been spared, for Mr. A. would have seen an order ahead and felt kindly to all. You may not think, my friends, when you read the Buffalo notes in the Am. Florist, that you are getting all the glorious literature that Mr. Adams has written for you. He writes spontaneously and voluminously and works in original jokes and brilliant witticisms, but, alas! the profound and metaphysical brain that wields the blue pencil in

House of Mrs. Thos. W. Lawson Carnations at the Establishment of the Originator, Mr. Peter Fisher, Ellis, Mass.

Dearborn street cannot appreciate these jokes and cuts and slashes them unmercifully. So, unfortunately, we get but the skeleton of these brilliant articles. What a pity that this editor did not see the spleen and narrowness and mis-information contained in the article in question. Alas, I am afraid that a dirty little insinuation is more to his liking than a harmless joke. There was a chance to use his pencil, but instead of that it doubtless touched a sympathetic chord. Poor creatures!

The Department Store.

Our New York contemporary very kindly and sensibly comments on the subject, and more said on the same lines would be wearisome. The department store is a great big fact, an institution that evolved from present-day conditions. Perhaps the greatest sufferers are the small stores of almost every kind on the outskirts of the cities. They feel it keenly, but what changes ever occurred, and even reforms, without some people suffering? As well talk and kick against the change of seasons.

I believe our business is hurt, or rather say affected, less by the large department stores than any one line, and doubtless if here and there an individual seems hurt by them others will be prospering by them. So fall in line and if you can make more money by having a counter in one of these large stores than renting a store to yourself, do it; if you don't some one else will. What a blessing if we all stooped no lower in our business transactions to one another than to exchange our produce for their value in money in a department store.

The Greek has not yet invaded us, and I believe that is merely because he has heard it is a slow town, and when he arrives he won't hurt any more than the public market, with its nominal rents.

The "cheap sellers" we have had with us for many years; in fact, as long as human nature has been muddled, and so we have had the cheap motives and cheap disposition and cheap pen, and why not? Without evil we should not enjoy the good. Without sorrow we should not know what joy is. And without stupidity we could not discern cleverness.

Visitors.

There has been an army of visitors of late, chief among whom was Harry Bailey, Joseph Polker, S. S. Skidelsky, Mr. Hageman and George Fancourt. "Dear Gange" looked fine you know. W. S.

ST. LOUIS.

The Market.

The weather has been quite warm the past week, and has made cut flowers of all kinds more plentiful, and most of the stock is of excellent quality. The retail trade is not very brisk. With the exception of funeral work, which seems quite plentiful, and a few weddings and receptions, very little is doing.

Roses are generally good. Beauties are scarce; other roses, such as Brides, Maids, Meteors, Perles and Woodtons, are selling from \$2 to \$3 per 100; extra select stock, \$4 to \$6, with plenty of them on hand for the demand.

Carnations are quite plentiful and still up in price; \$2 and \$3 per 100 is asked for the best, and a few are sold at \$1.50. Some fine Marquis is in the market, which brings \$3; Lawson, the same; White Cloud is the best white just now and is selling well.

Violets hold out well. Quite a lot of them are still coming in, but they are small and not of good color. They sell at 25 and 30 cents per 100. Sweet peas

are much in demand and the quality is good; price, 50 cents to \$1 per 100. Harbours and callas are very plentiful at 10 cents, or \$1 per doz., \$8 per 100. Greens are still scarce and only a few ferns are coming in. Smilax is selling at \$15 per 100 strings.

A visit to Union Market Saturday found all hands busy. As the day was warm a great lot of stuff was unloaded. Sanders, Schray & Sons and C. Young & Sons Co. have the largest assortments, and should this fine weather continue, they will have their hands full from now on.

A visit the same day among the seedmen found them all very busy. At Plant's, Dickman's and Schisler-Cornell's they say the business was never better than now.

Notes.

The Riessen Floral Company furnished the decorations for the World's Fair banquet last Tuesday night at the Planters' hotel. Mrs. Riessen says that 300 American Beauties, 10,000 carnations, 2,000 mixed roses and four vans of palms and other plants were used. The banquet was one of the largest ever held in the city and was very elaborate. Great credit is due the Riessens for the manner in which they handled the affair.

Max Herzog and wife will leave for Europe early in June to be gone about two months. Max will give the club the benefit of a report of his travels in a paper on what he saw of our business while abroad.

W. A. Chalfant, of Springfield, Mo., was a visitor the past week. Mr. Chalfant says that business is tip-top in Springfield. Mr. Bloek, of the Cincinnati Cut Flower Company, was also a visitor for a few days calling on his many friends.

August Schuerman, of the Schuerman Floral Company, has come to Peoria, Ill., to make large and extensive decorations for the May Music Festival at G. A. R. state encampment on May 10th to 16th. This is the largest decoration Mr. Schuerman has ever undertaken.

The race for the appointment of park commissioners and superintendent of public parks is quite interesting and the following are in the race: C. C. Sanders, Theo. Klockenkemper, Alex. Waldhart, Andy Meyer, Jr., and J. J. Benke. The rule is, "none but Democrats need apply," so let the best man win.

Club Meeting.

The next meeting of the club will be held Thursday, May 9, at 3 p. m. This will be the last meeting at which essays will be read, and Messrs. Garow Sanders, Carl Meyer, H. G. Biering, E. W. Guy, Max Herzog and R. J. Mohr are each looked for an essay.

A fine lot of sweet peas have also been promised for exhibition.

President Guy says that the members should turn out, as this will be the last indoor meeting for some time. It is the club's intention to hold its meetings during the summer at the homes of its members. The first of these meetings will be held in June and the place will be selected at the next meeting of the club. At this meeting we will also hear the reports of the exhibition and the World's Fair committees. Some of the old faces which have not been seen at the meetings for some time would be welcomed.

Pan-American.

The Missouri commission of the Pan-American shipped a carload of plants from Shaw's Garden to Buffalo last Wednesday; the plants were some of the finest in the garden. Messrs. Beall, Garow and Secretary Yost of the commission, departed Saturday for Buffalo, where they will begin active arrangements for the exhibition, and all the departments of the commission expect to have everything in readiness for the opening.

In the agricultural exhibits there will be twenty-seven varieties of corn, twenty-one kinds of grasses and all the kinds of oats which the state produces. One hundred and forty-two barrels of exhibition apples have been taken out of cold storage and are now in Buffalo. Missouri will be represented in the divisions of agriculture, horticulture, mines and mining, forestry and dairy. Your correspondent vouches that our friend William Scott will take the best of care of them.

Mr. A. A. Harper, of Pine Bluff, Ark., is in town calling on the trade. Mr. Harper says the REVIEW is the best advertising medium for the trade, a small ad sold him 8,000 moonvines in one week.

Bowling.

Five members met at the alleys last Monday night and some good games were rolled. Mr. Harper, of Pine Bluff, Ark., was a looker on and enjoyed the sport very much. The following scores were made:

	1	2	3	4	5	Tot. Av.
A. Y. Ellison.....	297	155	215	277 192
C. A. Kuehn.....	184	193	165	140	192	874 175
F. C. Weber.....	176	166	125	629 125
J. J. Benke.....	162	148	149	162	153	766 153

J. J. B.

TEWKSBURY, MASS.—A. Roper will soon build a 300-foot long house for carnations.

The Congressman—"Thank goodness, I've got all my seed packages addressed to my constituents. That makes so many votes solid."

Two months later. "Do you call this a geranium, Mr. Scruv?"

"What are you in congress for, anyhow? Here's a plant from that corn seed I asked you for."

"So you'd like a slice of that watermelon, hey? Here, take a whole one of the kind you sent us!"

—Chicago Daily News.

FREE SEED SCANDAL.

Weight has been given the allegations of irregularity in connection with the free distribution of seeds by distinct charges made by the Wholesale Seedsman's League of the United States. The charges are made in a protest to the Department of Agriculture against payment for seeds furnished on the April contract. Four specific accusations are urged over the signature of the secretary, any one of which, if substantiated, should be sufficient to stop payment on the vouchers of the contractor.

The league, through its secretary, declares:

First—The specific varieties of seeds indicated in the printed specifications of the 27th of January, 1900, have not been supplied, but very common and very cheap sorts substituted, thus giving the contractor great advantages.

Second—No varieties whatever are named on the printed packets, only the words "A selected variety," thus giving the contractor great advantages.

Third—The stipulated weights named in the specifications of the 27th of January, 1900, have not been given, but reduced quantities—from 10 to 50 per cent less than the specifications, thus giving the contractor great advantages.

Fourth—Because of other irregularities which can be named, giving the contractor extraordinary advantages for enormous profits.

As the Wholesale Seedsman's League is composed of men of standing in their line, it is the duty of the government to make a prompt and rigid investigation of these serious charges. Such action is the more imperative because the secretary of the league is reported to have made statements in an interview which may be taken as implicating the Department of Agriculture in the charges as to the manner in which the seeds have been put up and sent out by the contractor. The department cannot afford to have the suspicion of either negligence or implication in irregularities rest upon it. If hereto it has only been regarded as the helpless medium for the distribution of cheap and sometimes pestiferous seeds of the type of the Russian thistle, Congress being the responsible and ordering body. Implied irregularities, or gross negligence in connection with the contracts is another matter which it behooves the department to take cognizance of. It should promptly free itself from any suspicion, if it can. The free distribution of seeds, as it is carried on under the direction of Congress, is a disgraceful exhibition of paternalism, without the shadow of an excuse. But since the Department of Agriculture is compelled to superintend the distribution, it should insist that the specifications of the contract are fully lived up to.—Philadelphia Public Ledger, April 24.

THE ANNUAL GARDEN SEED RAID.

The government is devoting a certain portion of its time and money now in sending out to the constituents who are supposed to be in shape to use the gift certain allotments of garden seeds, procured for the purpose of free distribution from the seedsman and gardeners over the country. We in the United States laugh at the hereditary absurdities that hinge about the British throne, forgetting that we have a few of our own. One day, no doubt, the garden and field seeds that were distributed by the government were scattered over the country with the intention of introducing new varieties and improving the products of the farm and garden. Farmers were requested to report the

success of the experiment that the benefits might be made known generally. The farmer became a helper in exploiting new things.

Now the seeds are sent out in packets, labeled simply "selected variety," with out name or description whereby the farmer could report his success if he felt disposed to do it. The whole practice has so far departed from the original design that it is no more than a gift enterprise on the part of the general government, which sometimes gets the right seed into the hands of the man who wants it, and just as often sends the squash seed to the man who has plenty and who would rather have free cucumber seed than so many bun-sell-sprouts, which will not grow in his neighborhood and which he does not like anyway. Pittsburg Chronicle-Telegraph.

TOLEDO, O.

The announcement in the last issue of the REVIEW that the Henry Phillips Seed Co., of this city, had been awarded a share of the government seed contract, amounting to over \$200,000, was correct, but since that award was made the above named company has received the rest of the order, so they now have the entire contract, amounting to about \$200,000.

CLOVER SEED.

C. A. King & Co., Toledo, O., report under date of April 27:

this season to date, 126,400 bags, against 165,000 a year ago; 98,000 two years ago, and 134,000 three years ago. For the day there was no trade. No two sets of offering. Prime was neglected, 6.55 asked; 1898 prime, 6.40 asked; October no. 5, 5.35 bid."

However, a course of fair weather, most of one of the 3&D stands at the 17th St. Market will surely open up business in some directions. I will commence work gathered here in my 300 boxes, and try to take advantage of the season. Only fluctuations in price, owing to

Views in the Conservatory attached to the store of F. C. Mendonza, Chicago, at Easter.

"Very quiet and trade of a retail character. It is thought there will be some demand until the middle of May, owing to the backward season, especially in New York state. There is still some left here, but very little elsewhere. October in fair demand, trade light. Receipts today were only 16 bags, making 366 for the week, against 1,916 a year ago. Total this season to date, 69,783, against 144,000 year ago; 80,800 two years ago and 200,000 three years ago. Shipments today, 175 bags, making 2,528 for the week, against 2,859 a year ago. Total

BOSTON.

Trade Conditions.

A perambulating floral salesman of Boston who is as busy as I have to keep myself in order to earn a half-decent living, does not get half the opportunity to see and hear things that might be expected outside of his own narrow personal experiences. And all of these might not look well in print as buyer and buyee do not always observe usages of best society in their negotiations.

modities. But as time dragged on I began to see that the sound of the room after the people had gathered was a sure thermometer (or barometer, since pressure is measured rather than heat) of the amount of real trade being carried out. It cannot be described nor learned in a short time. This acquired seventh sense of mine told me during the first few days of the week beginning March 21 that the floral condition was getting badly demoralized. And why not? A month of rain and cloud, and conditions getting worse and worse every day. No goods coming in to be sold and nobody coming in to buy them. But really there was just enough going on to handle the extremely light out of everything. It was lucky for the buyers that a cheap line of material was largely what they looked for, because there was but little else. Things were generally degenerating into a series of rummage sales of floral hash, when old Sol gladdened all hands on Friday by a short call, and Saturday morning found him on hand and acting as if he had come to stay. More goods came in on that day than could be expected as the result of a few minutes of sun the day before and holiday times were illustrated by the way in which buyers climbed after them. Everything was emptied but the pockets of the salesmen.

Priees had been looking up a bit for a day or two, but now jumped up and fought the buyer, tooth and nail. Well, we fear "it's der last chance" until Memorial day. In this case it is "Make hay because the sun did not shine."

J. S. MANIER.

LEADVILLE, COLO.—The Leadville Floral Society has taken steps to awaken enthusiasm in the celebration of Arbor Day.

NEW YORK.

The Market.

Business is good in every branch of the trade, notwithstanding that for the past few weeks we have had an almost continuous down-pour of rain; the weather is simply glorious at present, however. Forsythia and tulips are in bloom in the parks and everything is rapidly bursting into leaf. It looks now as if it were going to be a short and busy season.

The prices on the plant and cut flower market maintain a good average; good stock has somewhat shortened up. We don't hear so much about intended excursions to Europe this year, but there promises to be a general exodus to Buffalo; several of the largest growers have been out there sizing up possibilities for extending their already large exhibits; we are told Julius Rochrs is there at present on a short visit.

The Pan American Exhibition affords splendid opportunities to the American grower. You will remember that floriculture at the World's Fair was not what it ought to have been. Some of the saving points of that show were made by small contributors, which, when combined, made very creditable exhibits. We hope that Brother Scott's endeavors will be supported by everyone; that the series of flower shows will be made great successes—worthy of the country—and this can only be done on the principle that every little helps.

Various Items.

There will be several removals among the store people here this May, owing to the tearing down of the buildings they occupy at present. Alex Warendorf, instead of combining with Fleischman, will occupy a temporary store at 9 West Thirtieth street; M. Hart, the wholesaler, moves over to keep Julius Lang company in Thirtieth street. The Cut Flower Company have moved from Twenty-third street to the corner of Twenty-sixth street and Sixth avenue; they occupy the third floor of the building; down in the basement there are six alleys which will most likely be well patronized during the summer.

The Florists' Club is making great efforts to put up a record breaking show in Madison Square Garden next October; this can only be accomplished by growers preparing for it now; get a schedule and grow something if only one plant. The show at the Bronx park, on May 9, will be of interest to all. Representatives of the Botanical Garden will meet most of the trains and show the visitors over the grounds and buildings. A lecture on "Some Cultivated Plants and Their Flowers" will be given with splendid colored illustrations, by Cornelius Van Brunt, in the museum at 4 p. m. Altogether a pleasant time is assured. The show will continue until the night of the 9th.

The seedsmen at their recent meeting here passed severe resolutions against the government seed scandal. The seedsmen can do anything they want by unity.

The annual meeting of the New York Cut Flower Exchange will be held on Saturday morning, at the Market at Thirty-fourth street ferry. They have another year's lease on the building, but it is expected that this once great institution will be shortly dissolved; most of the principal growers are tired and disgusted with the prevailing conditions and

no doubt an important change will soon be made. No doubt they will move up to the wholesale district where, though it may not be so convenient, they will yet have better opportunities to dispose of good stock at living prices.

It is funny how some rumors float about. Most of his comrades had Glumby retiring from business last week but he assured us that there was no truth in it.

Bowling.

Bowlers keep steadily at work. Last week there was a match between W. J. Stewart and S. Butterfield for a Broadway hat. It's Stewart's time to retort.

The New York bowling team won the Arlington tournament, competing with some of the crack teams of this city. They are steadily preparing for Buffalo. Scores last night were:

Burns	187	189	179
Leontz	187	177	181
Schnecht	172	167	180
Lang	189	176	186
Theilmann	176	205	156
Taylor	178	172	175

J. I. D.

PHILADELPHIA.

The Market.

The cut flower market was active during the end of last and early this week. The return of the sun, absent three weeks out of the four, has closed this rainy month cheerfully. By the time these hurried notes see light we shall in consequence probably be struggling under an avalanche of stock.

Beauties sell well and are fine. Specials bring \$2 to \$3 a dozen; good flowers, with stems 24 to 30 inches long, bring \$1 to \$1.50, while small flowers on weak stems are in fair demand at \$0 to 75 cents. Brides sell well at \$4 to \$5 a hundred, most of them bringing \$5 and \$6. Maids are about the same in price and sell a shade slower. Of the other roses Liberty sells fairly well; special blooms have brought as much as Beauty.

Carnations are wanted—pink a little more so than white; \$1.50 to \$2 buys pretty nice stock, with fancies a point or two higher. Violets hold out yet a little longer. Lady Campbell is worth 50 cents a hundred and a few brought 75 cents. Valley is used freely at \$3 and \$4, and mignonette is \$2. It isn't the Chestnut St. brand that ornaments the curb but a sort with a saline taste unknown behind plate glass. Smilax sells well at 15 and 18 cents a string and asparagus at 50 cents a bunch. Bulbous stock from outdoors is seen occasionally. Sweet peas are wanted when fine; white varieties are especially scarce.

Plans.

Hardy roses for planting out of doors are in great demand, a few in 5-inch and many in 6-inch pots, at prices ranging from \$2.50 to \$4 a dozen.

Next week will usher in the bedding plant season. It is very difficult to give an accurate report of this extensive business. It is scattered over too broad an area. Nine-tenths of our growers do a little in this line and many of them seldom figure in the cut flower or palm market; they retail most of their product at their own doors and send the balance to the city. When the bedding season arrives they bob up serenely with an

extra fine lot of geraniums, fuchsias, verbenas and other stock, part of which they will wholesale at from 25 to 33 1/3 per cent off their retail price. Of course there are a few large growers of these soft wooded bedding plants, but they do not control the market, which has had rather a downward tendency of late years.

Various Items.

The rose problem is giving some of our growers a good deal of difficulty. The necessity for variety is admitted; the difficulty of making a market for a rose is the drayback, even when it is as well done as the standard sorts.

Meeck's is a sort of mecca for the uptown craft just now. Here the lordly retailer in search of fifty assorted roses is seen side by side with the itinerant street peddler in search of half a dozen shanks. This place has made a specialty of pot roses for years, and they are as a rule cleverly done.

Edward Brown, of Weldon, has had a good season on small ferns. His houses are now filled with bedding plants and seedling ferns for next season's business. He also has a fern which he believes to be identical with *Nephrolepis Wittboldii*.

S. Mendelson Meehan has a plan for giving the members of the Germantown Horticultural Society field days, so to speak, during the summer months.

PHIL.

STERILIZING SOIL.

It is generally recognized that the way to combat insects and other pests is to prevent their appearance rather than to attempt to eradicate them after they have obtained a foothold, and it is evident that the only way to effectively guard against the presence of eel worms and grubs in the soil is to sterilize it, or destroy all living organisms it may contain by the application of heat in some form. Some have held that when this is done the soil has been injured as well as the pests killed but recent investigators say that the useful organisms are soon restored to the soil through the medium of the water applied to it.

Among those who have attempted the sterilization of soil on a large scale is Mr. W. W. Rawson, who has large market gardens at Arlington, near Boston. He reports very favorable results during the past two years, though present methods are far from economical. He says:

"I had sterilized in a box that holds about 3 feet, cord measure, and spread it on the top of the beds in my houses about two inches deep. It takes a long time to cover a space of half an acre but it pays. I am trying another plan for next year and expect to sterilize the soil in all my houses, over thirty in number, some half an acre in size, to the depth of a foot. It will cost considerable, but I consider it very beneficial and shall do the whole of them no matter what it costs. It thoroughly renovates the soil and the crop will grow to perfection while all insects are entirely exterminated.

"I heat the soil to 210 degrees and with the arrangement I have perfected can sterilize a space 90 by 16 feet in an hour. With four men this will take four weeks steady work. I cannot now go into further details but may say that

Mention THE REVIEW when you write

all my experiments have been very satisfactory.

If the renovation of the soil is complete as stated by Mr. Rawson it may be possible through this means to do away with the annual refilling of rose and carnation houses. With a number of permanent steam pipes run through each bench it would be possible to reinvigorate the old soil so as to make it available for continued use by the mere addition of fertilizers, as well as insuring absolute freedom from insect and fungous pests in the soil.

The matter is certainly of sufficient importance to warrant further experiment and investigation than it has already received. Certainly no large grower would hesitate at an initial expense of some little amount should it result in doing away with the heavy annual expense of refilling his houses, especially where new soil has been so largely exhausted as in some localities.

If you want a copy of the Florists' Manual, by William Scott, and cannot spare the full amount (\$3.00) at once, write us for our monthly payment offer.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head. Every subscriber is entitled to a free advertisement not exceeding 35 words in any issue desired during the year. If the advertisement exceeds 35 words, send at the rate of one cent for each additional word.

WANTED—Some good second hand 2-inch and 1 1/2-inch pans; also a few boxes of 16-cm or 16x16 glass. Burr D. Alton, Fairmount, Minn.

WANTED—Young man, with some experience in greenhouse, potting, bedding, etc. Gift Floral Co., Richmond, Ind.

SITUATION WANTED—As apprentice to learn the trade; private or commercial; willing; intelligent; age 16. Lawrence 233 West 68th Street, New York City.

WANTED—A good rose grower, Frank Gardner, 23 Wabash Avenue, Chicago.

FOR SALE OR RENT—By July 1, 5000 feet of glass in a lively western town; houses and boiler new; good dwelling and barn. Address J. care Florists' Review.

SITUATION WANTED—As plant and cut-flower salesman in a large city store; can do design work of 10 years experience in the front end business; Cleveland, O., Pittsburgh, Pa., and Rochester, N. Y., preferred; Scotchman 35 years of age; married, and of good address; references will speak for themselves as to character, ability, etc.; position must be permanent. Address Practical care Florists' Review.

FOR SALE—Cheap, on account of sickness, one of the best florists' businesses in Chicago, low rent and long lease. T. J. Corbrey, 149 and 141 W. Madison Street, Chicago.

WANTED—A single young man, with some experience in greenhouse work; must be willing able and of good habits; a permanent place if satisfactory to both parties. Law Floral Co., Shelbyville, Ind.

FOR SALE \$1400.00 In an Ohio college town choice location, steam heat gas, coal, paying business, established 7 years. Address telephone, care of Finley Real Estate Agency, Columbus, Ohio.

FOR SALE Some extra good second hand 3-in. pipe at 10c per foot; also some 4-in. guaranteed second. W. H. Satter, Rochester, N. Y.

WANTED—Several good American Beauty growers, Victor Bros., 4 Wabash Ave., Chicago.

—WANTED—

Among men or women to run a florists' store in suburbs of Boston; must be able to make up, do decorating and give list of references. Address FLORIST, Care of No. 637, Somerville, Mass.

POSITION as Manager or Foreman WANTED

by competent man of over forty years experience in all branches of horticulture, or would run good commercial place on shares; best of references; good wages and steady position desired. Address—

LOUIS SALINGER,

care of H. A. Dreyer or H. F. Mitchell, PHILADELPHIA, PA.

FOR SALE—Ten greenhouses, about 22,000 ft. of glass, mostly 16 x 24 glass, heated by hot water. Large brick coal cellars, will hold four cars of coal. The greenhouses are built on a southern slope, and all in good condition, and planted to roses, carnations and bedding stock, all fine order. Also all plants for next year's crops. Two dwellings; one house has six rooms and basement, and other ten rooms and basement, both heated with hot water; separate boilers; good city water pressure, and a little less than four acres of fine land. Close to cemetery; inside city limits. Fifty miles from Chicago and thirty-five miles from Milwaukee. This place must be seen to be appreciated. Apply to

FIVE TIMES AS MANY.
I spent \$2 in the classified columns of the REVIEW and as a result sold five times as many plants as I did through \$25 worth of advertising in another paper. This is experience that can't be gained.—G. P. MOORE, Ocean City, N. J.

ST. PAUL.

The damage suit brought by Chris Hansen against the St. Paul Gas Co. was settled out of court to Mr. Hansen's satisfaction by the company after the case had been on trial two days.

Mr. Hansen in his complaint said that he owns fourteen greenhouses on Dale street, near Como avenue and Front street. In 1898, as he complains, the defendant put in gas mains. The gas escaped, and he demanded \$12,000 for the plants killed, \$3,000 for the flowers which he could not sell by themselves and \$300 for extra expenses and \$5,000 for injury to his trade.

The defendant denied the allegations of the complaint, and also said that it had laid the gas mains on the premises of the plaintiff, that he would take and use gas in his establishment, which he did not do.

The case had been to the supreme court on a motion to strike out portions of the pleadings, and in this appeal the plaintiff was successful.

After the case had been on trial two days the company's attorney evidently saw the case was going against them and therefore offered Mr. Hansen a satisfactory settlement, which was accepted.

BUFFALO HOTELS.

The Buffalo Florists' Club have undertaken to arrange for the accommodation of all visitors to attend the convention of the S. A. F. in Buffalo.

While it is true that hotel rates will be higher than usual, there are any number of apartment houses that have been fitted out for the accommodation of Pan-American visitors, also private houses in the business portion of the city, whose rooms can be had for \$1 and up for each person, and in many breakfast will be served if desired, while other places will give all meals, the latter not so plentiful.

The hotel committee have a list of houses and hotels with the rates, and any person or persons wishing to engage rooms can have same secured in advance by addressing the chairman of the committee, W. A. Adams, 43 Main street, Buffalo, N. Y., stating whether they want accommodations at hotel, apartment or private house, with or without breakfast, and the number of persons desiring accommodations together. It will be necessary to inform the committee early, as they have the refusal of several apartments for the week, where from one hundred to one hundred and fifty can be accommodated in one place.

It will be unnecessary to communicate with W. J. Stewart, secretary of the S. A. F., as the executive committee look to the Buffalo Club to accommodate the visitors, which the hotel committee are willing to do, providing they are notified in time.

Street car facilities are excellent, the restaurants plentiful and rates reasonable. No one will be overcharged at any place, and with the above desirable apartments and private houses every one will be taken care of if they notify the committee in time.

THE COMMITTEE.

PHILADELPHIA.—Mr. H. Bayersdorfer, of H. Bayersdorfer & Co., sailed May 1 on the new international steamship "Zeeland" for his annual purchasing trip abroad, to select an immense stock, keeping his eye open particularly for the novelties the European markets offer.

PALATKA, FLA.—J. B. Donnelly has sold his florist's business to Mrs. J. H. Heston, Sr., who will continue it.

SAN ANTONIO, TEX.—The eleventh annual flower parade and battle of flowers was held here April 20th and was more gorgeous than any of its predecessors. The festival is held to celebrate the anniversary of the battle of San Jacinto.

LAWRENCE, N. Y.—The gardeners of this vicinity have organized the Lawrence-Cedarhurst Horticultural Society. J. G. McNicoll is president and Alex. McKenzie secretary.

Roses Grown for the Trade...

We believe in shifting Young Roses often. All stock offered in 2 1/2-in. pots has been shifted from 2-in. and is equal to most stock advertised as 3-in. and when we send it out is well established.

Special in Woottons, Perles, American Beauties, La France, Belle Siebrecht, Kaiserin Meteor, Golden Gate, Brides, Maids, etc.

We make a specialty of GERANIUMS in 4-in., Red, Pink, White and Salmon.

SMILAX in 2 and 2 1/2-inch. Extras.

CANNAS in 4-inch.
VINCAS, PELARGONIUMS, etc.
Write us about **BOSTON FERNS**.

TORONTO.

The regular meeting of the Gardeners' and Florists' Association was held on Monday, April 22d, and being the last regular meeting until September, all agreed that it should be Ladies' Night. This proved the best possible kind of a meeting socially. The program under the direction of the president pleased all present, after which very dainty refreshments were served by a local caterer, during which time Mr. J. H. Dunlop entertained those present with his excellent phonograph.

Roses, carnations, tulips, etc., were sent by J. H. Dunlop, Walter Munton, W. J. Lawrence, and some palms, etc., by Mr. A. Watkins. Mr. E. Collins did the arranging.

We have had some grand weather during the past week, it being very warm during the day, which means good bye to our large Bride and Bridesmaid blooms. Carnations are also beginning to show signs of too much heat. W. J. L.

CONVENTION EXHIBITION.

A printed diagram of the hall in which the trade exhibition is to be held in connection with the S. A. F. convention in Buffalo next August, together with the printed rules and regulations, has been issued by Superintendent Keitsch. The hall is 115x180 feet and the locations of the various classes are indicated on the diagram. This convention promises to be a memorable one, with an unusually large attendance, and the exhibition will no doubt be in keeping.

Anyone having any article of trade interest can find no better way of bringing it to the attention of the craft than by showing it at this exhibition. Copies of the diagram, regulations, etc., may be obtained by addressing Chas. H. Keitsch, Superintendent, 270 Southamp-ton street, Buffalo, N. Y.

INCREASED SALES ONE-THIRD.

We are very much pleased with the results we have received from your valuable paper and shall always continue to keep our advertisement in it. We are sure that our advertisement in your paper has increased our sales among the florists and nurserymen one-third.—S. WILKS MFG. CO., Chicago.

DENVER, COLO.

Messrs. Brenkert & Young, who bought the business formerly conducted by Lyle C. Waterbury, 2081 South University avenue, have completed a new house 30x100, in which they will grow chrysanthemums this fall.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

TARRYTOWN, N. Y.

The regular monthly meeting of the Tarrytown Horticultural Society was held April 25. President Smith in the chair. The executive committee reported the following essays and dates for the balance of the year:

May 30—Dracenas, Joseph Mooney.
June 27—Small Plants, David M. Farland.
July 27—Useful Commercial Ferns, J. M. Cooke.
Aug. 29—Cyclamens, J. E. White.
Sept. 26—Hardy Shrubs, Thomas Cuckburn.
Oct. 31—General Propagation, J. W. Coley.
Nov. 28—Carnations, William Scott.
Dec.—Election of officers and annual dinner.

Mr. C. E. Nossiter was proposed for membership. Alex McClelland, of Sing Sing, and Alfred E. Cooke and Mr. Grossman, were elected to membership. Two handsome *Spiraea astilboides* in 7 inch pots was the exhibit from Mr. Wm. Scott and the judges (J. E. White and David McFarland) awarded a certificate of merit.

On motion the secretary was instructed to send a letter of sympathy to Brother Andrew Grierson.

Mr. Turner, our late president, having left Tarrytown it was thought best to fill vacancy in executive committee and Mr. Stevenson was duly elected to fill the same. Mr. Shore, of Harrison, a member of the Portchester Society, being present on invitation, announced his subject and read an able paper on "Where are we at?" at the close of which he was cheered again and again and was given a vote of thanks for his paper and his visit.

H. J. RAYNER, Cor. Sec.

"AT REST."

The Chicago Gazette prints the following story regarding "Pete" Dailey: "That fat and gifted man before he graded our stage, used to wait on customers in a small butter and egg store on the East Side in New York. When Peter made his first appearance, his East Side friends decided to corner the flower market and mark his debut with a fitting floral tribute. The chairman of the committee of arrangements was a prosperous German undertaker, and his professional instincts so far got the best of him that when Mr. Dailey came before the curtain in response to enthusiastic applause, he was staggered at receiving over the footlights a huge pillow of white roses, on which was traced in purple immortelles, AT REST."

CUT FLOWERS BY MAIL.

Our attention has been called to several small ads. in an English paper of general circulation, of which the following is a sample:

A BOX OF BEAUTIFUL FLOWERS and FOLIAGE, in 60 upwards; free. DOBIES, Growers, CHESTER.

Our correspondent thinks that the florists of America might find a useful suggestion in this.

GREENVILLE, O.—Mary Elizabeth Frost, wife of James Frost, the florist, died April 24 after a long illness from progressive paralysis. She was 52 years of age. While her friends mourn her death, they bow with a feeling of thankfulness that her sufferings are ended. To the bereaved husband all extend sympathy and words of consolation.

TOLEDO, O.—A new greenhouse is soon to be erected at Calvary cemetery. Henry Bresser, the sexton, will place the order.

ROSE PLANTS and Carnation Cuttings.

This stock is in fine condition and is sure to give satisfaction.

Your Last Chance on GERANIUMS.... 25,000 Left at Reduced Prices.

Our last crop of Geraniums which we will offer in rooted cuttings is now ready. Our stock is all grown in benches the same as roses and carnations, consequently our cuttings are far superior to the stuff chopped off of pot plants, most generally sent out. Strong selected top cuttings, well rooted, ready for 2 1/2-inch pots of the following superb varieties — Brant, Grant, Heteranthe, S. A. M., Herkum, Mrs. E. G. Hill, Beate Pottevin, Mme. Jaulin, Mme. Brant, La France, Mrs. J. M. Gar and La Favorite, \$1.50 per 100; \$15.00 per 1000. Saint Scoulet, strong 2 1/2-in. \$2.50 per 100. Mme. Sallerton, strong 2 1/2-in. \$2.00 per 100.

PETUNIAS, double fringed, 8 novelties. White Fawn, Snow-Ball, Mrs. F. Sander, Pink Beauty, Fantasia, Helen Gould, San Juan and Bonnie, 20,000 strong rooted cuttings well rooted, that will make saleable plants in a short time, and ready for immediate delivery, \$1.00 per 100, \$10.00 per 1000, in variety. Any special variety, \$1.50 per 100.

ALYSUMS, California Giant, for vases and baskets, and Little Gem, for borders, strong 2 1/2-in. \$1.50 per 100, \$15.00 per 1000.

and first-class Certificate of Merit. Stock all sold until May 1st. Its vigorous free growth and a tendency to bloom early insures a safe investment.

Egypt A Most Distinct Dark Variety,

rich and dazzling in color. Surpasses all other crimsons in length and strength of stem, exquisite spicy odor and keeping qualities. Can be had in good flower by November.

Genevieve Lord The greatest Money-Making Pink. A friend of the common people and a descendant of the great Wm. Scott, whose illustrious mantle it is wearing with becoming grace. Stock large and in the pink of condition. \$5.00 per 100; \$50.00 per 1000.

All of the new ones of this year, the best of the last year, and the best standard varieties.

Chrysanthemum TIMOTHY EATON.

A large stock of this giant white which came over the border from Canada and "whipped" every variety which went up against it. The most sensational White Chrysanthemum ever offered. 500 each, \$5.00 per doz., \$50.00 per 100.

Complete List of Other Novelties and Standard Varieties. Catalogue ready; write for it. H. WEBER & SONS, Oakland, Md.

Beware of Sap in Cypress lumber for greenhouse material. A little sap in lumber to be used for interior finish in dwellings won't hurt. But in greenhouse material it is a **fatal defect**. The moisture inside the greenhouse makes the difference. The sappy piece is the first to decay and is the weak link in the chain. We can't afford to have any weak spots in our material. We want permanent customers, which means satisfied customers. We can make you a permanent customer. Your first order is our opportunity. May we have it? Write us about it.

THE RETAIL FLORIST.....

Wedding Bouquets.

The most important part of a bridal outfit from the florist's point of view is the bouquet, but from a long and close observation we regret to state that to the great majority of florists the bouquet usually means a heavy, cabbage shaped bunch of white flowers for which the poor, enthusiastic "man in the case" pays dearly.

Of course every one is acquainted with the rule that the bride's parents provide the church and house decorations, and the bridegroom the flowers to be carried or worn. Many brides dictate the selection and make up their bouquets, but in the majority of cases the man goes to what he considers the best places in town, gets suggestions from the florist, pays a good price and goes away convinced that he has done his best to surprise his girl and combat critical friends. But, alas, the general conception of the bride's bouquet is size and weight, and this is the only reason why bouquets are becoming unpopular among the refined people.

We use plain language; many don't like unvarnished words. There will always be a Cheap John, slap dash sort of trade; lack of ability's only hope, only resource, is cheapness; but it is wrong to imagine that there is only a diminutive sort of appreciation for the artistic; there are a great many people who at all times prefer the choice and the dainty to the coarse and big—a vast army who at times are willing to pay for the very best artistically.

Floral art has its renaissance; the present period is one of the most critical; there is a "best" in everything which survives, and this matter of the bride's bouquet deserves deep consideration. To preserve all that is most picturesque and beautiful is the special duty of the florist. Flowers have a refining influence, his arranging of them should add to that influence by being the quintessence of good taste. A bride will ransack every store, devote all her energy, spend her last dollar if necessary, to look her best on her wedding day. To obliterate a dainty, costly lace dress with your cheap ribbon or asparagus "shower bouquet" is a crime; it is one of the few exceptional cases where flowers are vulgar because the florist is ignorant.

If by what we write here we can induce a few to make their bouquets lighter, we will have done some good. We have often been told by brides that they would refuse to carry the bouquets sent them by even high-toned florists, were it not for the fact that they were the gift of the man they loved. We have watched brides walk to the altar carrying the bouquet upside down, and others where they had to use both hands to grasp the handle of the huge bunch; is it any wonder then that in the very cases where flowers should be carried, we see and read of them carrying prayerbooks? And this is on the increase.

There is scarcely anything requiring so much ability as the making of an ideal bouquet; it is an art well worth studying. The present age may be truly considered the commercial one, but it is also critical and appreciative. At this time of the year there is an abundance of splendid material distinctly appropriate to the subject under discussion. We should do our best to get out of the narrow rut of icebox stock. There is a dreadful sameness, a trying monotony in our present every day supply. It is our own lack of appreciation of the truly beautiful which prevents the public from buying and enjoying many of the finest floral gems.

In New York we have every class, every nationality, to deal with; many of them insist or getting what they were accustomed to at home, and many grotesque affairs are seen. Some of the Latin and even Saxon races still ask for the foulard or carton holders, but there are distinctly American styles of bouquets that have never been copied from, nor hold second place to any in Europe.

A very beautiful custom has been revived—the wearing of a wreath of roses. No large roses can be used in this de-

sign flowers for men. Loose bunch of gardenias with not much foliage, tie with two white silk cords. Gardenia for head spray, loose bunches of double pink azaleas with pink ribbon for bridesmaids.

Long spray of magnolias with thin string of asparagus tenuis-simus, stems bound in white ribbon, to be carried on left arm. Red bud peach or high colored sprays of blossoms similarly arranged for bridesmaids. Bouquet of *Daphne Indica alba*, one Liberty rose, the broad white ribbon; pink bouvardia for attendants.

Long spray bunch of Cherokee roses, handle twisted with and tied with a few streamers of narrow ribbon. Crimson Rambler sprays for bridesmaids.

Bouquet of Lamarque roses, ribbon handle, no bow streamers. Moss roses and Testouts or La France for attendants.

Loose bunch of white sweet peas, and match bunches of pink sweet peas, broad ribbons or silk cords.

A few white orchids can almost always be found on any orchidist's place, and they are of course the queens of all flowers. The most beautiful and popular way of arranging them is the light, long spray with one or two fronds of *Farleyense*, very little, if any, ribbon. *Odontoglossum crispum*, *phalenopsis*, *Vanda carolina*, *celogync*, white cattleyas or any kind in fact can be made use of, but rough greens, poor quality ribbon and compactness must be avoided. Where orchids are carried by the bride, cattleyas should be carried by the bridesmaids.

A long spray bunch of *stephanotis*

View in the Store of the Shanahan Florist Co., San Francisco, at Easter.

sign, they must be very small, such as Manda's *Wichuraiana* hybrids, or polyantha roses; very little foliage, no fixing up, just a natural spray wreath. Many prefer this to the cluster of orange blossoms, the half wreath of valley, or clumsy substitute. Let us run over the list of available material with suggestions.

White lilac with one red or pink rose, white velvet ribbon, short streamer, long loop, for bride. Bunches of apple blossoms, pink silk cord, for bridesmaids;

mixed with *Rhynchospermum jasminoides* makes something specially choice; the foliage is too stiff, of course, but you cannot use *Asparagus plumosus* or *similax* consistently as a substitute. A finer green, like a spray or two of *Ficus repens* with silk covered wire and *Adiantum gracillimum*, makes a better job.

Fine work can be done with carnations; the entire outfit should be of this flower. There are two ways. The most classical is to carry loose bunches across the left arm, and in the case of brides-

most abundantly (200) and left. The reverse of these should be especially fine, because of the change and they should be set in rows and straight. The other way set some single and some bouquets and generally one small ribbon, white for the top petals and of the color for the rest.

So-called "candy bouquets," but with light-colored pompadour and bouquet, and center of good to match. Flowers such as carnations, chrysanthemum, gladiolus, gerbera, long-stemmed, etc., are adapted for heartiness of clusters. We think a cluster of something, or even one flower at the side of a bouquet, all ways better character to it, takes the sameness away and gives it finish.

There is no end to the combinations one can get. Vases and orchids, white roses, and vases of red, geranium, or chrysanthemum and of orange blossoms with all can go.

A bouquet of white daisies for the bride, yellow ones for her maids, can be made to look pretty. A great many brides are anxious to carry white flowers, for the reason that the color emphasizes their own if they happen to be pale. There is an increasing demand for bride's bouquets made of American Beauties or red roses. No sensible florist will make up a set of wedding bouquets without first inquiring about the color of the dresses to be worn. Choice of flower mainly depends on that point; the ribbon especially should be the exact shade of flower or dress; there can be no compromise.

There are many grand roses and carnations on the market which could be brought into prominence and kept in cultivation were the average florist equal to the requirements of his profession. My friends, the ideal bouquet is not the flat headed, fern rimmed thing we even see at the exhibitions. It is something far above that. Let us see less of the chrome and more of the water color in our art. Size does not always count; quality is more generally preferred. Attend to the strict rules of correctness; make your bouquets small and dainty, for they will be carried with pleasure. Keep course greens away from tender flowers. Remember the dress is more important than your bunch. The finish is everything; have no tinfoil, no heavy rims of ferns or sphax, but a creation of your best endeavor.

IVERA.

LILIES AND FERNS.

We present herewith an engraving from a bunch of lilies and ferns arranged by the Geo. Witthold Co., Chicago. The ferns used are fronds of the *Nephrolepis Wittholdii*, which are proving exceedingly useful in such work, taking the place of cycas leaves at much less cost, as well as being a great deal more graceful.

There is certainly a great future for this fern in supplying material for use in floral arrangements as well as a decorative plant. The fronds last exceedingly well. To test this point to our satisfaction we recently obtained several cut fronds and kept them in vases of water in a living room. They remained in good condition for three or four days and were in fair shape at the end of a week.

This valuable characteristic appealed to us so strongly that we requested the Messrs. Witthold to make up and photograph for us the arrangement from which the engraving is made. It is certainly a very pretty bunch and will no doubt be of interest to many.

THE LAWSON CARNATION.

Owing to numerous inquiries a few hints on the cultivation of the Lawson may not be out of place at this season. Cuttings put in ground any time during February or March will make best stock for early planting and flowering. By "early" I mean plants to be housed later (at least of July) a first week in August. I wanted for later planting cuttings taken in April (owing to its rapid growth and great vitality) make grand stock for taking indoors in August and September.

Early stock should be put in 2 inch pots and repotted along as they require until in 2 1/2 inch or 4 inch, but it is not advisable to have the size larger than 4 inch as the ball will be too large to transplant in benches where 4 inches in depth is the limit.

As soon as danger of frost is over the stock may be planted out in the field, and as they are to be lifted early they need not be planted wide apart. Finally the distance will be governed by the width of the Planet, Junior, or other wheel hoe to be used in their cultivation, and 6 to 8 inches apart in many cases will be sufficient between plants in the row.

The worst defect in the Lawson is a tendency to throw short stems on first blooms early in the season, if the plants are allowed to make their flowering growth in the field. To remedy this, go over the plants, say ten days before housing, and carefully pinch back all flowering growths, so that their flowering shoots are made under glass. This will result in much longer stem on first blooms, that will keep increasing as the season advances.

The Lawson is an early and by reason of its exceptional vitality, continuous bloomer, throwing up its growth in rapid succession so that it comes as near being continuous as any variety yet produced. Its productiveness is wonderful, considering the quality of the blooms, and to stimulate this a liberal supply of nourishment is necessary. I find an occasional top dressing of pulverized sheep manure every two weeks suits it admirably, commencing early in November and continuing all through the winter and spring season. Should the soil appear to be overfed, or sour, withhold the sheep manure and substitute a good dusting of air-slaked lime.

Another important point is a tendency of the blooms to fade or "bleach" around the edges on the sudden appearance of sunshine after dull, cloudy weather. We have little trouble in this respect as our houses run north and south and so do not get the direct light in winter, which has been in our favor in the cultivation of this variety, and the reason why I have failed to warn others whose aspect is the reverse. We have had no shading on our houses until three weeks ago, when the east side was shaded, and now we are lightly shading the west. I would advise those growing the Lawson with a southern aspect to shade say 4 to 6 inches down the center of each square or row of glass, as early in the season as this trouble appears, increasing the shade with the season.

If you have any of your houses running east and west, plant Lawson in them, or in any houses that get partial shade from other structures. It will well repay any extra care bestowed.

In other respects the culture of the Lawson does not differ from the average carnation. Only during the dull

months of winter I find it beneficial to run the night temperature at from 32 to 55 degrees, keeping it as near the latter as possible. This promotes a steady growth and prevents splitting and other evils caused in my opinion by slow or arrested development.

There is little or no splitting in the fall or spring. Why is not raising the temperature essential to offset this trouble in winter?

PHILIP FISHER.

Ellic, Mass., April 29, 1901.

FORCED BULBS.

Arc tuberoses good to use again after they have been in bloom? Also are paper white narcissus and Roman hyacinths of any use after they have flowered, and are they hardy enough for outside use. Also the Dutch Romans.

L.

In answer to the above I will say, first, that tuberoses are now so inexpensive in quantities (you can buy them for 85 or 86 a thousand, good bulbs) that it would be absurd to try and save any bulbs that have once been forced. You could not do it for twice the sum that you can now buy them for.

The same can be said of narcissus and Roman hyacinths. These bulbs are grown several years by the Frenchmen, who do all they can to raise a fine bulb in a natural way in the richest of soils, picking out the flowers as soon as developing. We treat them very differently. All we seek is to force out the flower that they prepare for us. Both would flower again freely, but it would never pay.

Contrary to what many gardeners suppose, the white Roman hyacinth is hardy. As proof of this, Peter Henderson & Co. have many thousands of these now in bloom at the Pan-American Exposition which were planted late last December. If it was a winter with little snow and the bulbs were unprotected and the ground was continually freezing and thawing they would possibly not come through the winter. But planted deeply, then allowing a little frost to get in the ground and covering over with a few inches of litter or stable manure, the Roman hyacinths come through finely. They can also be frozen in boxes outside, when prepared for forcing, but never should be handled in that way; or rather never should be brought suddenly into a warm house.

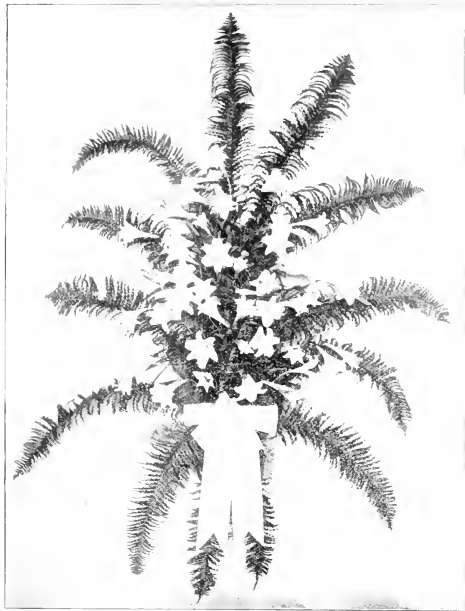

The paper white narcissus does not want any frost at all.

There is no such thing as Dutch Romans. Possibly your correspondent means the small Dutch hyacinth. These when not forced for very early flowering and allowed to dry off gradually can be planted again in the following October or November and give a fairly good flower out of doors and will do fairly well for several years, but never depend on any of these bulbs for forcing the second year. As every one knows the Dutch hyacinth is as hardy as a tulip and will survive any winter we have.

WILLIAM SCOTT.

HARDY PLANTS.

Editor FLORISTS' REVIEW: In compliance with your request, I give you my views regarding the plan that appeared in your last issue. I agree with Mr. Higgins as to the great adaptability of hardy plants for the city yard, but am inclined to favor a few more shrubs, or

Funeral Bunch of Lilies and Ferns.

some vines, to tumble over the fence. As a rule the majority of our perennials are not attractive enough during the whole season to win popular favor, and being planted in front of a few shrubs or a green vine on the fence will help them out admirably. Not every shrub will give satisfaction in the more densely settled parts of the city, but such old standbys as the Philadelphia, flowering currant, honeysuckles, sumach, etc., will thrive almost anywhere.

Looking over the list for the front plat there may arise some objection to Aster Nova-Anglie, Helium autumnale, and probably *Boltonia latissuama*, for such a prominent place. Let us take into consideration that the average person must have something to catch and hold his attention at once to create in him an interest that will later develop into a longing for higher knowledge of plant life and an appreciation of its varied beauty. Mr. Higgins and myself need no stimulant in this direction and we both love the New England aster, but in selecting stock for a city plat where the number and variety is to be limited I would suggest for the same position the bushier *Heliopsis scitcheuanus*.

The trouble with *Helium autumnale* is its poverty of foliage. The asters have to some extent the same fault and are apt to look ragged, besides their foliage is

not attractive enough. I have tried them in beds, pinched back as you would chrysanthemums, but have never been able to overcome a certain weedy look.

Boltonia latissuama is somewhat better and planted in a corner where its lower stems can be well covered by other plants like the pretty *Chelone lyonii* it should not be altogether discarded. I should select it for the rear plat.

Hibiscus Crimson Eye is preferable to *H. militaris* for the front, and so is either *Aquilegia canadensis* or the pretty Skinnerii (title preferable to canadensis). Such plants as *Yucca filamentosa*, *Campulidicarpus*, *Ceropegia lanceolata*, *Achillea millefolium roseum*, *A. ptarmica*, fl. pl., Sweet Balm (*monarda*), eu-lalia and ribbon grasses, peonies, *Clematis recta* and *C. Davidiana*, should never be omitted when planning a city garden.

To the plants named by Mr. Higgins I would add such bulbous plants as snow drops, scillas and chionodoxa. The last named winters splendidly here and will come up year after year. I would not leave out lily of the valley for a shady nook (there is already a large patch in a spot not shown in the plan.—Ed.).

Mertensia virginica is pretty indeed, but its flowering period is, I fear, too short to aid in creating enthusiasm in the average city resident. Neither does *Yucca filamentosa* last long in flower, but

the soil and the appearance of the ground may be a distinction that will cause the average owner must appreciate.

I could also advise the planting of several of the beautiful *Chionodoxa* *glauca grandiflora* variety from the Barberis-Thunberg's collection in the city.

Very truly yours,

We omitted some of the plants named by Mr. Jensen as desirable because the reason they were included in the plan and evidently overlooked by Mr. Jensen. We invited Mr. Jensen to give us his view of these plants, and we got out as much information as possible. At the same time we know that Mr. Jensen is the best of reasons for selecting the subjects he did. It has been pointed out that the plant in question is *Chionodoxa* *glauca* Michigan, a locality with which Mr. Jensen has long been familiar. Mr. Jensen's experience has been that of the plants several miles away from the lake, and this proximity to the lake makes a wide difference as to hardiness. And a part of the plan was to include plants that could be obtained and depended upon in this region. We have asked for suggested changes to the plan from a number of our correspondents, knowing well that more favored sections certain suggestions can be most advantageously used and it would be useless to plant here and we hope in this way to provide suggestions for all sections. (Ed.)

PERENNIALS.

Perennials are a class of plants for every garden, large or small, and possess and which add to its beauty from early spring until late autumn. A great many of the very early spring flowers belong to the bulb family, but at the same time there are many perennials that bloom first as early, such as pansies, daisies, iris, hardy primroses, etc. Following these come bleeding-heart, poppies, foxglove, German iris, sweet williams, garden pinks and a host of others. In mid-summer we have the varieties of phlox, Golden Glow, blanket flower, hollyhock, followed by those of fall flowering, such as perennial asters and a list that time does not allow us to mention.

Some of the early flowering sorts make their growth in the late fall, which growth is checked by the cold blasts of winter. Early the coming spring we find them again in active growth. In case these varieties of perennials are to be transplanted annual transplanting is to be recommended. Again we find many perennials making their growth after the flowering season and then remain in a dormant condition until the following spring. To this family belong dicentra, lilies, etc. These plants should not be cut down after flowering, only the flowers removed, as the vitality of the plant is diminished by cutting the stock, thus rendering it impossible to make the necessary preparatory growth for the next season's flowering period.

To grow perennials in their most perfect beauty it requires a well manured, deep worked soil. It is a great mistake to think that perennials once planted will care for themselves. Such seems to be the incorrect idea and it is a pitiful sight sometimes to see these plants making an effort to blossom overgrown with weeds and given no attention whatever. During recent years there has been a tendency to neglect perennials; how-

ever, some of our most beautiful flowers are to be found in the neglected corners of the old-fashioned garden. A beautiful display of flowers and blending color can be gained by proper management and a succession of colors are not uncommon.

We need but to glance over the list of these flowers from the tall-growing and stately sunflower and bellflowers, with their rich and dainty colorings, to the diminutive dwarf daisies, to see the possibilities that lie within the collection. If only a little care in arranging, and attention after planting is given, let what a fairland of blossoms one may have at a trivial cost, which in many private gardens, at least, would make them more than welcome. Let us hope, therefore, that we may see more of grandmother's flowers in our gardens and that they may receive their proper heritage of beauty and grace in the twentieth century garden.

C. M. H.

AN EMPLOYEES' ASSOCIATION.

EDITOR FLORESTA'S REVIEW: Your request for an expression of opinion in regard to the proposed association of employees is one that deserves careful consideration, for the problem seems to be a knotty one, and also appears to have gone far beyond the good advice contained in the moderate and sensible paper read by Mr. Knepe at Detroit.

The chief objects of a labor union among the members of any handicraft are the protection of its members and the promotion of their financial interests, but one of the worst features in nearly all such unions is the fact that the entire membership stands on one level as to pay, and that the union is most beneficial to the indifferent workman.

It has been suggested that an organization of really capable workmen should be formed, but just imagine the thorny path of the committee on membership of such an organization, and the great difficulty of fixing arbitrary standards by which to guide such a committee.

There also appears to be an obstacle to the success of such a union in the fact that our business is spread over a great area and is mostly in small establishments, there being probably not more than 25,000 employees in about 10,000 establishments. This estimate allowing for quite a liberal increase in numbers since the census of 1890.

That there is room for improvement is quite evident while we find some employers who desire to engage a skillful plantsman, a capable manager and a real floral artist all combined for the magnificent sum of \$25.00 per month and board, the latter including a boudoir over the boiler house, but there are also employers who really appreciate efficient help and are willing to give due credit.

There is also the possibility of the employee becoming a partner or starting in business on his own account and in such a case it is highly probable that the union would be much less alluring to the man than before and on the whole there seems to be numerous obstacles and many details to be considered, and this, Mr. Editor, is not the view of a pessimist, but of one who feels some interest in the welfare of his fellow employees.

W. H. TAPLIX.

In regard to starting an employees' association would say I am heartily in

favor of such a movement. I have often thought that such an association would be a benefit to the employer as well as the employee if the membership were restricted to good, capable men; otherwise it would be useless.

It would give the employer a better chance to get good men and furthermore it would protect the employee against men who have only a limited knowledge of their profession. At all events let us have such an association of good practical men.

JOHN B. RUBY.

Gardener to Hon. J. S. Fassett, Elmira, N. Y.

Those who have written favoring such an organization have not told us what benefits would result from it except that it would lead to more intimate acquaintance and sociability, and might be the means of obtaining higher wages for its members. Those who would be eligible to join it are so widely scattered that the social features could be better attained through the florists' clubs, and, once a year, through the Society of American Florists.

In order to increase the wages of the employed it would have to be practically a trades union, and these have been the cause of so much enforced idleness and suffering and lawlessness, and would at once antagonize employers—between whom and those who work for them there should be, if anything, more friendly relations—that it seems to me this should not be undertaken.

Trades unions are of the most benefit to the unskillful and the incompetent, and the capable workman who is willing to do what he is hired to do, honestly, and to the interest of his employer and himself, loves himself by associating with the shirkers. Those who are skillful and willing and trusty seldom lack employment, for all over the country men are looking and advertising for such; and if you needed such a person today you would have some trouble to find one unengaged.

The workman who likes his occupation and wants to succeed, should learn all he can about it through study and thought and observation, and if he is so unfortunate as to be engaged by an ignorant boss who will not pay his wages promptly, let him leave his service as soon as he can honorably and seek employment with a gentleman; and as soon as possible let him engage in business for himself, and become in his turn an employer; and when he is engaged in the weekly hustle for the means to pay the men at 5 o'clock on Saturdays, he will conclude that employees are not the only ones who have troubles.

W. T. BELL.

HARDY PLANTS.

Another Plan.

We have chosen as a subject for this week's example in home decoration a two-story house, 24x58 feet, standing on the west half of a double lot 50x100 feet on the southeast corner of the block, south front, having no fence on the street sides of lot.

The arrangement includes only moderately tall shrubbery and a few tall perennials, because it is never advisable in a city to plant trees which will attain a large size, in a limited space, and they should never be so near a house that they will over-shadow it with their branches.

In the plan the front line of porch is 30 feet from inner edge of sidewalk, but

the same arrangement could still be used if the distance were 10 feet less. It would only bring the shrubs at the right nearer to the front.

An important consideration in making a selection for the group like the one here indicated is to have it so that the planting may be kept in shape and expected from year to year without expert assistance. All the plants and shrubs named have endured ordinary winters here in Chicago without special protection and will doubtless prove hardy except far north.

JOHN HIGGINS.

PAN-AMERICAN EXPOSITION.

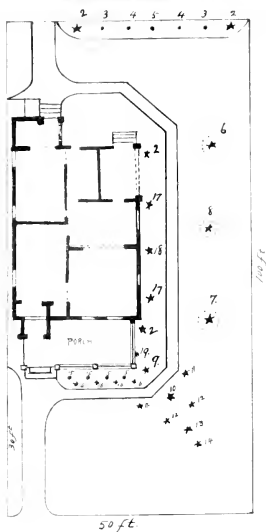

General Notes.

The Pan-American Exposition threw its gates open to the public on Wednesday, May 1. The dedication and opening ceremonies which were to have taken place that day have been postponed till the 20th. We might have had an earlier spring, as we had two years ago, and outside work could have begun the first week of March, but we had an average spring, so there is no excuse on that account. The fact is, the few weeks between the going of winter and the opening of May are all too short for such an immense amount of work as should be done, and there are here and there places which yet need the finishing stroke. There is, however, beauty enough to satisfy any one, and visitors can see plainly what an enchanting scene the whole will be when completed.

The department of works has a very large force of men and has been working hard placing the evergreen trees in position around the Grand court, where they are most effective as a relief to the immense amount of building. The hyacinths planted on both sides of the Grand Court have made a most brilliant show. The territory surrounding the Service Building has also been very attractive. Some thousands of shrubs have been planted in many parts of the grounds. The banks of the canals have also been planted with groups here and there of willows, and hundreds of drooping plants are planted on the margins. The asphaltting was begun about ten days ago, and soon every inch of main road and esplanade will be covered with this smooth pavement.

If the rain and snow have been any hindrance to the work, it seems to have been more beneficial to the grass and the spring flowering plants, which in many parts of the grounds are at present very gay. The Rose Garden is now one of the most attractive parts of the whole grounds. In it are situated all the beds devoted to exhibits, in round figures about 200. H. A. Dreer planted a large number with bulbs last fall. Six large beds of tulips at the Elmwood entrance, planted by F. R. Pierson, are now a brilliant mass of bloom. Messrs. Dreer, C. Eisele of Philadelphia, and Denys Zirngibel, of Needham, Mass., have also some fine beds of pansies. The 4,000 hardy roses planted last summer as an exhibit by Elwanger & Barry, of Rochester, and Nelson Bogue, of Batavia, have wintered well and are now breaking finely, which assures some grand beds. A large bed of 500 plants of Crimson Rambler roses, the exhibit of F. R. Pierson, are growing finely. This will be a remarkably showy bed.

In addition to the firms mentioned

Key to Plan.

- | | | |
|---------------------------|---------------------------------|------------------------------|
| 1 Hamulus apulcus | 8 Double flowering Cratae-apple | 15 Peonies old vars. |
| 2 Berberis vulg. purpurea | 9 Philadelphus coronarius | 16 Apuleia vulgaris |
| 3 Asparagus off. | 10 Syringa vulgaris | 17 Forsythia suspensa |
| 4 Thalictrum polygamum | 11 Cytisus Pyrus Japonica | 18 Lonicera tatarica gr. fl. |
| 5 Bellonia asteroides | 12 Weigelia rosea | 19 Clematis virginiana |
| 6 Cereus candelabra | 13 Spiraea Van Houttei | 20 Clematis Jackmanni |
| 7 Weeping mulberry | 14 Dentzia racemata | |

above there are beds of hyacinths and tulips planted by James Viek's Sons, of Rochester; C. D. Zimmerman, of Buffalo; Orange Clark & Son, of Buffalo; Henry F. Michell, of Philadelphia, and ten beds of Spanish Iris, the exhibit of Clucas & Boddington, of New York. Messrs. Parsons & Son, of Flushing, N. Y., have an exhibit of *Hex crenata* and Japanese maples. The Wm. H. Moon Company, of Morrisville, Pa., have sent a collection of retinosporas which fills a large bed near the Women's building. Many more consignments are on the road.

Ellwanger & Barry have a very large group of deciduous trees and shrubs. Thos. Mehan & Sons, of Germantown, Philadelphia, have a large collection of evergreens in tubs. J. C. Vaughan, of Chicago, has also a number of beds of pansies. C. W. Ward, of Queens, N. Y., has sent a splendid collection of pelargoniums and zonal geraniums, which are now in the North Conservatory. Peter Henderson & Co. have a large space allotted to them and Mr. Julius Heinrich is on the ground with a force of men getting it in fine shape. If carried out according to their plan it will be a very fine exhibit.

The Whitney-Eckstein Seed Company, of Buffalo, also Henry A. Dreer, have each about a quarter of an acre devoted to lawn grass, which are splendid in quality. An exhibit which may be of great interest to many is a bed of Ginseng planted by the American Ginseng Com-

pany of Rose Hill, N. Y. They have also some fine plants of this Chinese favorite started in the greenhouse. All the herbaceous plants, of which there is a great collection planted by Henry A. Dreer, the Park Floral Company, of Denver, and several others, have come through the winter well.

The Mexican government is making a display in several departments and in horticulture they will be quite prominent. They have four large beds devoted to their exhibits, chief of which is under the charge of Mr. McDowell of Mexico City.

Too much cannot be said of the beauty of this part of the grounds, which covers some fifteen acres interspersed with trees and flower beds, good roads and a velvety lawn. To the south of this rose garden is the Buffalo Park, with its fine landscape gardening.

The Exposition management sent to Florida our Mr. H. E. Van Deman, who has sent home some very large cocoon trees, which are now boxed and placed in the center of the Horticulture building. He also sent what is quite as acceptable, a large collection of agaves, many Mexican orchids and a splendid assortment of tillandsias, which will be used to great advantage in the decorations of the conservatories.

The Geo. Wittbold Company, of Chicago, sent a fine collection of their decorative fern, *Nephrolepis Wittboldii*. A fine collection of pineapples have arrived

from Florida, some in flower, some with fruit half grown and some nearly mature. These arrived in excellent order. In the main Horticulture building many of the States are installing their exhibits. California has a magnificent display. Every inch of this fine building will be secured. The States also of Ohio, Michigan, Connecticut, Missouri, Illinois and the Province of Ontario, and some just arriving. I am glad to see that some of the States are not only putting up handsome structures for their exhibits, but are embellishing them with growing plants. California is particularly lavish with palms and orange trees. Missouri also has a fine lot of palms.

The Carnation Exhibition.

As advertised, a carnation exhibition was held from May 1st to the 5th. The flowers were staged in the large Horticulture building, which without any artificial heat kept very cool and the blooms have lasted longer and in better condition than the writer ever remembers having seen elsewhere. Many additions to the exhibits were made on Saturday, but six days after the first blooms were staged the majority were set in excellent condition and the quality of the flowers was a revelation to many visitors who saw them on the opening day. Florists are, of course, acquainted with the wonderful varieties sent out this and last year, but the public were not aware of the extraordinary size and beauty of many of the newer varieties. The flowers came from many sections of the country, and, without giving you a list of all the exhibitors, I will say that the varieties which showed up in fine style were J. H. Manly (a grand scarlet), Gov. Roosevelt, Morning Glory, Mrs. Lawson, The Marquis, Golden Beauty, Olympia, Cross-brook, Rosy Horn, Genevieve Lord, Mary Wood (extra fine), Leslie Paul, Mrs. Bradt, Gen. Gomez, Frances Jacob, Guethe (a beautiful light pink), Norway, White Cloud, Flora Hill, Mrs. J. J. Shield (a grand scarlet), 100 blooms of Equiper (greatly admired and a great keeper), and many other of the well known older varieties. The carnation exhibition was a success, and as there were 26,000 people on the grounds the first day you can imagine that this exhibition gave pleasure to many.

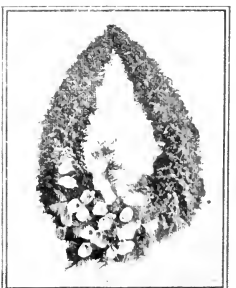

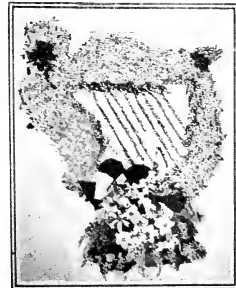

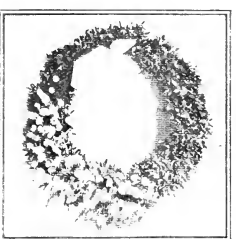

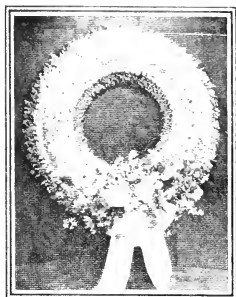

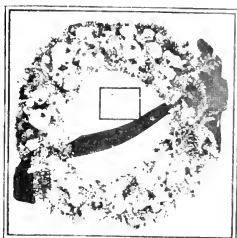

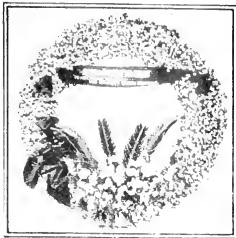

Though not horticulture I would like to say that beautiful as this Exposition is in daylight when the coloring of the buildings can be seen, to me there is a charm about it when lighted with its 350,000 electric lights that is beyond description. The Electric Tower is possibly a sight that has never been equaled. On it are over 40,000 electric lights. When seen close by you can see the wonderful designs in which the lights are arranged, but when at some distance it is one gorgeous blaze of light.

The carnation exhibit was not entirely competitive. Following is a list of the awards for the first two days. Some splendid flowers have since arrived from C. W. Ward, the Chicago Carnation Company, Fred Dornier & Sons and H. Weber & Sons, Oakland, Md. The result of the later awards I have not yet received. Prof. John F. Cowell acted as judge.

WM. SCOTT.

Carnation Show Awards.

First Award.—C. W. Ward, Queens, N. Y.; Class 1, "J. H. Manly"; class 5, "Gov. Roosevelt"; class 6, "Golden Beauty." L. E. Marquisee, Syracuse,

Some of the Floral Tributes at the Funeral of the Late Queen Victoria.

BOSTON.

Trade Conditions.

We have not even yet been allowed sun enough to warm things into normal spring conditions. Has anything been overplentiful, except possibly the lilies, until Saturday, the 4th. Upon that day there seemed to be a slight inclination to congestion of the market, mostly caused by an increase in the carnation output. Prices were variable throughout the week, but averaged very well for the time of year, and a great many blossoms changed owner-ship. Quality since the advent of a little sunshine has been very good indeed.

The lack of variety of flowers used in this city is now quite marked, as bulb goods are getting quite scarce, as is also anything in the line of small white flowers, a little spirea being about all in that line to be found. The Liberty rose is again on its feet and coming in very freely, some of them nearly three feet long. Like Longfellow's little girl, when they are good they are "very, very good," but when they are bad they are none. Incidentally red roses suddenly became very plentiful on the Saturday already spoken of, caused by a falling off in the demand.

Various Items.

The editor of the REVIEW has kindly asked me what I think of all this talk about an employees' association, with a request to think over its possibilities for good and give his type a chance at it.

Now, I did not know there was any talk about such an association and really can see but little need of one so far as New England is concerned. Understanding that a national affair is under consideration, I have an idea it might prove a detriment to this section by getting some of our best workers too much interested in positions outside of their natural bailiwick. This, of course, might prove of advantage to individual employees even if against the best interests of our community at large.

Of course the purpose of such an organization would be to forward the interests of the employee and might be construed as against those of the employer, whether actually so or not. Then the society of the little white metal leaf would have to look horns with it.

I do not know just what the legitimate functions of this labor trust might be outside of keeping run of good positions and a line of men to fill them, a possible assistance to members in contention with unjust employers and a standing inducement to all workmen to train themselves up to the standard of requirements for such membership; the latter would seem to be its most commendable feature, as well as its broadest field of operation. New England has too many floral employees unfitted for recommendation, but everything here is too scattered and on too small a scale to be systematized, it seems to me. And, too, our co-operative market, with its efficient and accommodating manager, takes the place of all this very nicely, so far as Boston and a twenty or thirty mile radius is concerned. Also, in this day of colossal consolidation the next thing to do is to Morganize labor as a whole, irrespective of special trades, isn't it?

Away back in heathen literature somewhere there is a sublime little story-

ette about a man digging around in the mud while all the time a crown hangs suspended over his head for him to occupy any time he sees fit to straighten up and fill it. The second case has just come to light. One of nature's noblemen has been engaged in the plebeian labor of shipping roses and pinks when stern Justice pines at him and says, "Ecco homo; stand up and occupy thy crown!" Jack Minton is on jury duty for two weeks. Now, ye florists, who have broils and imbrogios, bring them forth! Hast imbold of the cup that both cheers and inebriates? Hast thou stolen thy neighbor's sheep or looked with lust upon anything that is his? Come to this fount of justice and be free! It is just the legal situation for which lots of us have been looking.

Statisticians tell us that our death rate has been low during our long spell of bad weather, but there surely has been an alarming amount of sickness among the florists, the case of Mr. Woodward, of South Framingham, being the only one, so far as I know, resulting fatally.

The last arrival upon the sick list was E. M. Wood, of Natick, who was critically ill with nervous affection, coupled with weak action of the heart, for two or three weeks. His improvement is now very rapid and has been for a week or more.

The demolition of old Horticultural Hall began upon schedule time, May 1, and the building now looks much like Admiral Cervera's fleet when Sampson and the other giants got through with it.

J. S. MANSTER.

CHICAGO.

The Market.

There was a sudden change to cooler weather the latter part of last week, but the supply seems not to have been lessened by the change and prices are still very easy. Tea roses are still quoted at \$4 to \$6, but very few indeed are sold at the top figure, and some excellent stock has gone begging when offered at \$4, especially Brides, which do not move as well as Maids. The great bulk of the good stock is sold at from \$2 to \$4, and the ordinaries are jolled off at \$1 to \$2, and even lower.

Beauties seem to have suffered more than the teas from the season of summer heat, and good ones are very scarce. The few really first-class ones bring \$3 a dozen, but \$2 to \$2.50 is more of a quotable figure, and from that they grade down to \$1 per hundred or per bale, as may happen.

Carnations, especially the colored ones, show the effects of the heat badly. A very few extra fancy still bring \$3, but good fancy go at \$1.50 to \$2, and really nice flowers can be had for \$1.50, while Scotts, etc., sell at 75 cents up to \$1. And a buyer who will clean up a mixed lot can get figures as low as 40 cents a hundred.

Lilies and bulbous flowers are still very slow. Fine Poet's narcissus that sold well last year goes begging for a customer at any price this season. Too many cheap roses and carnations to be had. Arbutus seems to be in the same class.

What little demand there is comes from outside points. Local demand is practically dead. It is the moving season, and this always deadens local demand.

Club Meeting.

At the meeting of the florists' Club last Friday evening the entertainment committee, consisting of Edgar Sanders, P. J. Hauswirth and E. F. Winterson, was instructed to arrange for a picnic some time in June or July. Mr. J. P. Sinner, of the firm of Sinner Bros., was elected to membership. Mr. Paul Koppanka responded favorably to a request for a paper and will read one upon cyclamans at the next meeting (May 17). The secretary was instructed to communicate with those on the printed program who had not yet read their essays and endeavor to have as many as possible ready for the next meeting. The secretary presented his apologies for failure to get out notices for the last two meetings and promised better for the future.

The transportation committee reported having issued a circular letter regarding the Buffalo trip as per instructions given at the previous meeting, but that it was too early to report results. The letter will be found printed elsewhere in this issue. The club hopes for a general and early response.

Various Items.

Kennicott Bros. Co. had a fire scare last Saturday. The place became entirely filled with smoke, and as its source could not be discovered crossed electric wires was suspected. The fire department was called and the firemen discovered that the smoke was coming in from an adjoining basement in which a pipe connecting a boiler with the chimney had become disjoined. There was a good deal of excitement before this discovery was made and the street was filled with fire apparatus.

A good many changes are now taking place in the wholesale section. Weiland & Risch are already established in their new place in the basement, while Bentley & Co. have taken the corner position and will be installed by the time this appears in print. They will have much more space than before. The Poellmann Bros. Co. have taken the place leased by John Muno in the basement and have also secured the adjoining space, giving them much larger quarters, and Mr. Muno will take the place they now occupy on the second floor. This building will be occupied very largely by wholesale florists.

J. F. Kidwell & Bro. have taken the place formerly conducted by John Blanck on 43d street and will continue it as a branch of their Wentworth avenue establishment.

One of Mr. John Muno's daughters was married last Tuesday to a Mr. Phillips.

Heavy rain fell here last Monday night, but suburban places only a few miles west were not favored. And they needed rain, too.

John Mangel's window was particularly attractive last week. The short stemmed flowers were in the center and the heights graded gracefully up each side, while in the center was a tall, slender vase of Beauties. The colors were well harmonized, sufficient green was used to avoid any glaring effects, and the form combinations were excellent. That it was appreciated by the people was evidenced by the number attracted to it.

Mr. N. A. Schmitz, of the Guardian Angel Orphan Asylum, will decorate the

Auditorium for the forthcoming Catholic convention.

T. J. Cahney has sold his business on West Madison street to H. N. Bruns. Mr. Bruns took possession at once, but will retain his old place also until his lease expires next July. Mr. Cahney has moved to Oak Park. He will spend the summer in Wisconsin and in the fall will go to California for a long stay.

The prizes offered by the Tribune for best gardens, window boxes, etc., this summer, have very considerably stimulated the sales of the seedsmen and florists.

Geo. Delin-ki has been convicted of the murder of Anton Lisle and has been sentenced to death. Lisle was employed at the greenhouses of Brant & Nee, Forest Glen, and was waylaid and murdered one evening on his way home. Mrs. Lisle was considered indirectly the cause of the tragedy.

The Geo. Wittbold Co. recently made shipments of their new fern and other plants to England, Germany and Denmark.

Mrs. Thalon has closed her store on 41st street and has returned to Cincinnati.

Chas. Probst has bought the store business of John Venson at 29 State street.

Mr. and Mrs. Fred Holton, Milwaukee, were recent visitors.

The tulips are now in gorgeous bloom at the parks.

A. L. Vaughan was confined to the house by illness for some time, but is now about again. He will soon leave for New York and will probably remain east for a couple of months.

Bowling.

The "League Games" were started with great eclat and much enthusiasm last Tuesday evening at Worden's alleys and three hot games were served up, all effectively garnished with noise enough to wake the dead. Ed. Winter-son's yell at each strike made by members of his team was undoubtedly heard in St. Louis, New York and Buffalo and must have had a terrifying effect on the bowlers of those cities. The scores which are not so terrifying follow. The Growers win from the Retailers and the Wholesalers win from the Seedsmen. The games will be continued at the same place each Tuesday night.

ST. LOUIS.

The Market.

There is an excessive supply of all kinds of flowers and the local trade seems to have died out all of a sudden. The wholesalers say that never before was there such an oversupply in this market. But there are indications that the supply will soon decrease, as much of the stock shows the weakening effects of the hot weather.

Roses, generally, are soft and suffer in color, too. Some of the best Beauties sold as low as \$2 and \$3 per doz.; some good Beauties as low as \$1.50 per doz. and from that down to \$1.50 per 100. Other roses sold at \$1.50 to \$3 per 100 for select stock; in large lots at \$10 per 1,000 and from that down to \$6 per 1,000. Carnations are extremely plentiful, more so than roses, and stock can hardly be given away. General stock, 50 cents per 100; selected fancy, from \$1 to \$2. They are suffering from the heat and a great many come in badly bleached. The wholesale men claim they had to get rid of them at \$4 and \$5 per 1,000 and plenty, even at this price, went to the dump pile. The retailers downtown are selling them at 10 and 15 cents per doz. Violets are about out of the market; only a few from the south come in and they don't sell. Sweet peas, too, have taken a drop to 10 and 35 cents per 100 and the market is overstocked with them also. Harisii lilies are down to \$4 and \$5 in hundred lots; callas the same, though like everything else they go slowly.

Outdoor stock is swamping the market; lilac is overflowing the wholesaler. Bulb stock is also a drug; good valley is coming in and sells at \$2. In greens, ferns are again in the market, and the wholesalers say there is no lack of anything except buyers.

Trade at Union Market has improved greatly and plenty of stuff is sold every day.

Notes.

Henry Schnell formerly with the Michell Plant and Bulb Co., has for the past few months been with Max Herzog. Mr. Schnell has the making of a good man for just such a place as Herzog's. He will have full charge of the place, assisted by Miss Martha Herzog, while Max and his wife are away this summer.

Mrs. Eugene Wurst left Friday night to join her husband in New York. Mr. Wurst is now employed as foreman at Siebrecht & Son's place.

The Engleman Botanical Club gave a free exhibition of wild flowers, this being the fifth annual. The exhibition was opened at noon Saturday on the fourth floor of the Board of Education building. The flowers were gathered last Friday, by 100 members of the club, in the woods and fields near the city. A large crowd was present to view the exhibition, which was pronounced a success.

Bowling.

In the April series of games, which closed last week, Ellison, who rolled only

110, won this championship; he also rolled in all seven games, and rolled in 100 in each game. With 222; Ellison's total with 220.

price for geraniums is 7 cents for 4-inch stuff, which is enough if they are fine. There are some nice verbenas about in 4-inch pots at 8 cents, which appear to take better than the 3-inch.

Theodore Leiszig, 3420 Frankford avenue, has a well grown collection of bedding plants, including geraniums, operatum and in fact almost everything that is in demand.

The Floral Exchange have their new range of houses ready for glazing. These houses are supposed to be the palace of the Queen of Edgely.

Some of the retailers are complaining that they cannot get the pot roses they want because the growers have sold them to the department stores. The early bird gets the worm every time, gentlemen.

George Anderson is going to plant a house of Liberty this season.

Robert Craig Rose have just planted a house of the rose Marquise Litta.

Stephen Mortensen has already cleaned up three-quarters of his young roses. They were certainly very well done.

John Savage has been experimenting with white snapdragon as a cut flower.

J. W. Coldish has his specialty, bedding plants, in full swing now. His double petunias and Phlox Drummondii are very fine. He also has nice Pyrethrum aureum and geraniums of Bryant type, besides a general line of this class of stock.

Samuel J. Bunting has tried grafted and own root Brides and Maids and prefers the former. This is not, however, the general feeling here. The majority of our growers seem to prefer own root stock, although there is a strong minority for the grafted plants.

The seedsmen are rushed with work now; their stores are busy places.

A house fell in last Saturday morning right in front of William J. Baker's commission house. Fortunately no one was injured. The accident was due to the foundation being undermined by an adjoining excavation.

The Florists' Club meeting was held on Tuesday evening at Horticultural Hall. Robert B. Cudlum, of Thomas Meehan & Sons, Germantown, read a paper on landscaping as a part of the florist's business.

The fifth Ladies' Night at the club will take place on Wednesday, May 15. It will be the first of these entertainments to begin in the afternoon at 4 o'clock, continuing throughout the evening. The committee, of which John Westcott is chairman, have issued a neat program. There will be bowling, shuffle boards, refreshments and good company. It is hoped each member will come and bring both maid and matron with him.

It is sad to be referred to as the author of a paragraph which while intended to cheer our comrade gave pain in quite an unexpected quarter. Perhaps some day persistent endeavor will create a great essay on outdoor watering or something else that is really clever.

PHIL.

SPRINGFIELD, ILL.—David Wirth has added a new house 10x120 and a new salesroom.

IRIDAWOOD, N. J.—A. V. Snyder is building three houses 30x300 each for roses and carnations.

WANT ADVERTISEMENTS.

Advertisements under this head one cent a word, cash with order. Plant advertisements not admitted under this head.

Every subscriber is entitled to a free advertisement not exceeding 35 words in any issue desired during the year. If the advertisement exceeds 35 words, send at the rate of one cent for each additional word.

Florists' Review

When Writing Advertisers.

BUFFALO.

I don't think business has been much accelerated by Pan-American visitors as yet. At least not our business. But it has been quite good and no surplus of flowers. There have been but two warm days this spring and everything is late outside. Outside tulips are just opening; carnations are still fine and more plentiful, glad to say. Roses are very fine. Mr. C. Guenther, of Hamburg, began cutting his first crop of Kaiserin two or three weeks ago and they are A No. 1 flowers.

Our markets are loaded with plants. As usual the people who have a few geraniums in flower rush them off to the market and if they sell at a good price who can blame them? It is quite certain that there cannot possibly be a surplus this year for everything that will adorn a garden will be wanted. There have been so many visitors in town this past week that I cannot possibly remember them all and am thinking of starting a registry of all who visit the Horticultural office at the Pan-American. There was Mr. Huston and Mr. Gray of Toronto, Mr. Julius Roehrs of Rutherford, Mr. Wadley of New York, Mr. Krick of Brooklyn, who is an exhibitor, Robert Kilt, who is also an exhibitor in the Bazaar building; and attending the first day's exhibition of carnations, the opening day of the Exposition, we had Mr. Gammage of London, L. E. Marquisee of Syracuse, C. Guenther of Hamburg, and the manager of Mr. John H. Dunlop's retail store. I know I have missed some and they must excuse me for I have had several things to think about of late.

The Carnation Exhibition was a decided success and has interested thousands. The list of exhibits and exhibitors will be found under Pan-American notes. I will say here that several firms have most generously sent on a second shipment, arriving on Saturday and today, Monday, and from present appearances the show will be an attraction every day it was advertised. You hear a little grumbling from people who find the grounds and buildings yet incomplete, but they are in the minority and I take more stock in the impression that it makes on the men in our own business, who certainly have an eye for the beautiful. The Marquis of Syracuse as he stood at the base of the Electric Tower with its 40,000 lights and listened to the music exclaimed, "This is Fairy Land; I want to see the Midway." Mr. Huston of Toronto, who spent three weeks at the World's Fair, said, "This is far more beautiful," and Brother Kilt said, "I am astounded with its grandeur." D. J. Scott left on Thursday for a few days in Philadelphia in search of some plants for papa. W. S.

ROCHESTER, N. Y.—Peter Kane, who has been employed by Ellwanger & Barry for forty years, died April 25.

WORCESTER, MASS.—E. Rathburn will open a floral store at the corner of Pleasant and Severs streets.

READING, PA.—C. Getz, the florist, who suffered considerable loss through the falling of an adjoining wall on one of his greenhouses shortly before Easter, has brought suit for damages against the owner of the wall that fell.

sults.—DAVIS BROS., Morrison, Ill.

"A Most Valuable Decorative Fern."

Philadelphia, Feb. 2, 1901.

The Geo. Wittbold Co., Chicago, Ill.

Gentlemen: We are much pleased with the *Nephrolepis Wittboldii*; the specimen plant which you recently sent shows the character of the plant very nicely. Its bold heavy foliage, which is made to appear very light and graceful by the wavy edge, should make this a most valuable decorative fern, for which there is room alongside the Boston fern.

We see no reason why the plant should not become just as popular as this valuable variety.

Yours very truly,

HENRY A. DREER, Inc. J. D. E.

"The Great Fern of the Future."

Newark, Ohio, Dec. 27, 1900.

The Geo. Wittbold Co., Chicago.

Gentlemen: Please ship to me as soon as possible 300
more of your *Nephrolepis Wittboldii*.

The plants I received from you a short time ago are
doing so nicely that the more I see of them the more I am
convinced that *Wittboldii* is the Great Fern of the Future,
and I feel I cannot get too heavy a stock.

And I know that every enterprising florist will purchase
a stock of it as soon as he sees what a grand decorative
plant it will make. Wishing you a prosperous New Year,
I remain,
Yours truly, A. J. BALDWIN.

KANSAS CITY, MO.

Trade Items.

Generally speaking, trade is not what might be expected at this season of the year. The sudden change of temperature Easter week, from a cold, raw "norther" to almost midsummer heat, and which apparently has come to stay, has had a demoralizing effect both on the cut flower trade and quality of stock. Surely, the growers ought to feel satisfied with the past winter's business; they were able to demand their own price, and there has been a steady demand for everything salable.

Cut flowers are more plentiful, with roses rather in over-supply. The best can be bought for \$3 and \$5 per 100. There are none too many carnations; they retail from 30 to 50 cents per dozen; violets were a favorite to the finish.

Ed. Bunyar and Alfred Broman, of Independence, Mo., had great success with a late crop of violets. A shipment received here as late as May 1 was of excellent quality.

We have had very little springlike weather and no rain in three weeks, which proved disastrous to early vegetation and outside bulbous stock. Last year the display of tulips on the "Paseo" was a glorious sight and attracted thousands of visitors, but this year the display is disappointing.

One of our enterprising department stores has been experimenting with the cut flower business since Easter. Large shipments of roses of an inferior grade were received daily and advertised as choice stock for 50 cents per dozen. A thriving business was done for a few days with the unsuspecting mortals both in and out of town, but the venture was short-lived. Some people are wiser, and the florist probably the most benefited in the outcome.

Visitors the past week were: A spruce looking young man, W. H. Danman by name, from Pleasant Hill, Mo., who was on his way to Colorado Springs to fill a position with Mr. Clark of that place; Wm. Wirt, of Parsons, Kan., who was looking for greenhouse material to increase his plant the coming summer, and a representative of the Dayton Paper Novelty Company, Dayton, O.

H. J. M.

ORANGEVILLE, MD.—W. H. Reinhardt has formed a partnership with his father and purchased greenhouses here. The firm name will be H. Reinhardt & Son.

BURLINGTON, IA.—N. J. Burt & Co. are coming into direct competition with the government. They have offered to give free any kind of garden seeds to any one who cannot afford to buy.

EVANSVILLE, IND.—The wife of Mr. J. D. Carmody died April 28 in a sanitarium at Chicago, where she had been taken to undergo a surgical operation. The remains were brought to this city and interred in Oak Hill cemetery. Mr. Carmody has the sympathy of all.

Poinsettia Pulcherrima.

The Favorite Christmas Plant.

STRONG SPRING STRUCK PLANTS, from 2 $\frac{1}{2}$ -inch pots, \$8.00 per hundred. Ready June 15th.

These will make the largest plants. Later propagated will be equally as useful. Poinsettia will not endure any disturbance of the roots when large, so start with small healthy plants.

GALVESTON, TEXAS.

I am pleased to be able to report our trade as well as business in general good in this city. Our citizens have bravely recovered from the crushing effects of the terrible disaster our city suffered and one result has been the knitting together in closer relations of those who suffered together. In harmony we look up to those men of our city who in our days of darkness and doubt unflinchingly took up the burden of leadership, pointing out the way, leading our people to their work and setting an example by working like slaves themselves. We were soon taught that the solution of our apparently unsolvable problem was hard work and the work has wrought wonders.

Of course there is more talk about oil now than flowers. Still our short season was as fine as ever. It is almost over now, but the hardest work of the year is ahead of us, for during our hot summer we must get our stock in good shape again for fall business.

Our city is still "The Ocean City." A very few of the offenders were killed by the storm and you can now see every variety of them in bloom on our side-walks and in our gardens. Wistarias—especially the blue, pomegranates and Rhynaspermum jasminoides can be found on many places. Also crape myrtles, altheas and many other shrubs, as well as some oak and Umbrella-China trees stood the salt water. As a very visible green we miss the wild peaches very much; they were all killed. Take it all in all our city is looking neat and clean now and almost every family has a garden around the house.

We have a good society here and it was harmony here, too, that brought about the quick recovery and resumption of normal conditions. There is a good demand for flowers here and there are calls for every small occasion. The taste for floral arrangements is general and discriminating, too. One pleasure is that customers are quick to appreciate anything really good and up-to-date and are not only willing to pay a fair price but call in afterward to express their appreciation when they have been pleased. It makes life worth living to do business with such pleasant and appreciative people. Many a one who returned after the storm, probably with doubt as to the wisdom of remaining, could not resist the charms of the city and its society and are here again to stay. They all agree that Galveston is "all right" in spite of the memories of awful disaster.

I send a box of Kaiserin and Tr-out roses cut from two-year-old plants planted out in our garden in January. Insects, especially worms, are very bad this year. The salt water inundation seems to have agreed with them.

C. E.

[The roses, while showing the effect of their long journey, had kept remarkably well, for outdoor grown blooms, and were good, long-stemmed flowers. Ed.]

TOLDO, O.—Henry Crane & Co. have just purchased 215 boxes of glass for their large new house and had to pay \$5.60 a box. Last year they bought the same size and grade for \$2.50 a box. They feel that the trust is taking too much advantage of the situation.

WOBURN, MASS.—N. H. Cushing, a large grower of pansies, died of pneumonia April 28, aged 40 years.

PREVENTION vs. CURE.

By far the larger part of the progress
made in the growing of plants and flowers
has been due to the discovery of
means of prevention of the action of un-
favorable agencies rather than their re-
moval or cure after once obtaining a
foothold. The man who discovered that
the fumes from sulphur painted on the
heating pipes largely prevented the ap-
pearance of mildew in rose houses that
were otherwise correctly handled really
made the production of roses as carried
on today a possibility, and he is en-
titled to a place alongside the man who
found out that tobacco would keep green-
fly in check.

Nowadays, instead of waiting for the
appearance of certain destructive worms
we endeavor to kill the adult insects that
lay the eggs from which the worms are
hatched, and the killing of one adult
means the non-appearance of hundreds
and sometimes thousands of worms. It
is the same as regards fungous pests,
and in all these cases the old adage that
an ounce of prevention is worth a pound
of cure applies with emphasis.

We anticipate great advances along
these lines in the future. The way has
been clearly pointed out and the wise
will travel it as rapidly as possible. And
in view of the serious damage frequently
done to roses by the eel-worm, that
microscopic imp of perdition, we feel
sure that sterilizing the soil for rose
houses is bound to become universal. It
is merely a question of getting it done in
the cheapest and most expeditious way.

To this end we reprint in this issue
the record of the experiments carried on
by the Hatch Experiment Station of the
Massachusetts Agricultural College at
Amherst, and some observations by oth-
ers who have given the matter some
thought and attention.

We are sure it will pay every grower
of roses (especially those who use steam
for heating and therefore have steam
readily available) to use sterilized soil
in at least one house the coming season
and note the results compared with the
roses in his other houses.

SOIL STERILIZATION.

[Some extracts from Bulletin No. 55 of
the Hatch Experiment Station of the Mas-
sachusetts Agricultural College, Amherst.]

In our experiments relating to soil
sterilization we have tried many methods
and found the tile system as used by
Galloway cheap, and satisfactory for

many purposes, especially when we wish
to sterilize the soil in the bed in which
the crop is to be grown. Another ad-
vantage which it possesses is that it can
be used for subirrigating purposes. To
ascertain the best method of using tile
we arranged them in beds of equal size
containing the same amount of similarly
prepared earth. The beds were 18 feet
long, 30 inches wide and 1 foot deep, and
each contained 45 cubic feet of soil suit-
able for growing cucumbers. Part of the
soil had been used previously for cu-
cumbers and tomatoes and was well in-
fested with nematodes, and previous to
sterilization it was mixed with fresh
horse manure. The beds contained a dif-
ferent number of feet of pipe which were
laid in various ways and in each case
they were placed about 2 inches from the
bottom.

For details concerning the manner of
piping see the engraving. Bed (a) was
piped with two lengths of tile without
any end connection. Bed (b) was piped
with three lengths of tile with end con-
nections, thus forming a continuous cir-
cuit. Bed (c) was piped with two
lengths of tile with end connections and
cross tile every two feet. Bed (d) was
piped with three lengths of tile as in
(b). Each bed was treated separately
from a four horse-power portable boiler
having a pressure of steam varying from
40 to 80 pounds. The steam was con-
ducted from the boiler through a 2-inch
pipe provided with a valve, and this led
into a 1-inch pipe which had a four-way
connection, the ends of which were in-
serted into the free open ends of the tile.
The connections were easily made with
the boiler and when one bed was steril-
ized it was disconnected and the pipe
attached to another bed. The steam was

condensed by means of a coil placed near
the top, although steam made its escape
could have served the purpose better.
The valve regulating the amount of
steam from the boiler was never fully
open more than half way, this being found
sufficient to supply all the steam re-
quired, and it was, moreover, necessary
in using so small a boiler to take care to
keep the pressure of steam high.

The results of these experiments are as
follows:

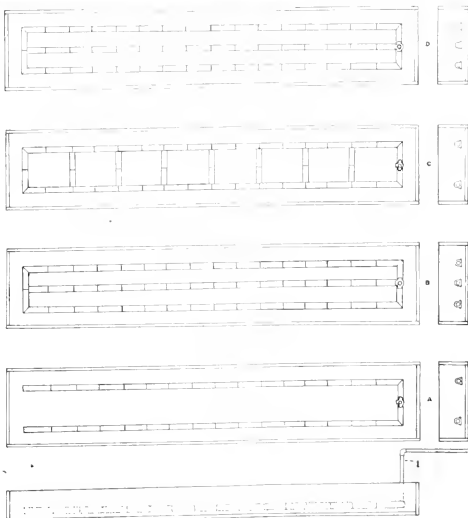

Bed (a) was heated to 204° F. in 1 1/2
hours.

Bed (b) was heated to 204° F. in 15
minutes.

Bed (c) was heated to 204° F. in 1
hour.

Bed (d) practically the same as (b).

These experiments show that bed (b)
which was piped with three lengths of
tile gave the best results, with bed (c)
following, and the most unsatisfactory
results were given by bed (a). Bed (d)
gave practically the same relative re-
sults as (b). Bed (b) contained a few
more feet of pipe than (c), and for
this reason alone it might be expected
that the heating of the soil in the bed
(b) would be more effective. There is
another more important difference, how-
ever, and that is in the method in which
the steam circulated. The cross tiles in
(c) were not nearly as effective as the
middle lengths in (b), neither would
they have been even if they had con-
tained the same linear feet. Bed (a)
would have heated more effectually if
there had been a continuous loop. Had
the four beds been piped the same and
all connected at once with a large boiler
maintaining a high pressure of steam
they could have been heated in two hours'

Arrangement of tiles for sterilizing soil in beds.

tile. The tile which was employed for sterilizing were left in the soil, but in these experiments they were not used for sub-irrigation purposes. Should the soil, however, be removed and replaced by other soil it would be desirable to remove the tile, which can, however, be easily put back. We have tried many different methods of piping with variations in the pressure of steam and we will state that in order to get the cheapest and best results it is necessary to pay attention to two points, namely, that the higher the pressure of steam maintained, the quicker and more effectual are the results, and the greater the tile area in which the steam has to circulate the quicker it will find its way through the soil and accomplish the sterilization of the same. It is not only necessary that there should be a number of feet of pipe in the soil in order to success-fully heat it, but the area of cross-sections is equally important.

In regard to the cross-section area of the pipe we will relate the results of one of our experiments in trying to sterilize a box of soil with 2-inch lead pipe made up into a coil of four lengths. This coil had holes in it 2 inches apart and was placed in a box containing 16 cubic feet of earth, which was easily heated in one hour's time when three lengths of 2-inch tile were used and a pressure of 4 or 5 pounds of steam. With the small lead pipe it was found that it was impossible to heat the soil after running it for a number of hours. The method just described is especially adapted to sterilizing soil in the bed where it is subsequently to be used in growing some greenhouse crop subject to nematodes. It should be stated, however, that certain beds are more suitable for this purpose than others. Soil can be more effectually heated in a narrow bed than in a wide one. Many of our cucumber growers raise their plants in a bed 15 or 18 inches wide, 8 to 12 inches deep, and 50 to 100 feet or more in length. Beds approximating these dimensions could be easily heated in a short time at little expense, and in a cucumber house it would be most desirable to construct them after this manner. Not infrequently, however, cucumber houses are not provided with benches, but the vines are grown directly in the ground soil. In this case should sterilizing become necessary, the earth in which the plants are growing can be separated from the remaining soil by means of 12-inch boards or plank and this lot of earth can be tiled and then treated. The boards or plank arranged in this manner restrict the amount of soil to be treated and prevent contamination from the untreated. In case pots are used, as frequently happens in tomato culture, the earth can be sterilized in a special bed or the pots containing the earth can be placed in a tight box and sterilized, although this latter method is not so practical, as pots take up more room than soil placed in a bed.

For sterilizing small quantities of earth we make use of an ordinary small house boiler which heats our laboratory and seldom indicates more than 3 or 4 pounds pressure of steam. This is connected with a box containing 15 cubic feet of earth, in the bottom of which is buried three lengths of tile supplied with steam from the boiler. With a pressure of 3 or 4 pounds of steam the box can be easily heated to 212 degrees

F. in one hour's time and this amount of earth will fill about fifty 10-inch pots. A small bed of this description would be exceedingly convenient for florists in sterilizing earth for such pot plants as cyclamens, etc.

The method of ridding the soil of nematodes where such plants as cucumbers, tomatoes, etc., are sown and where the crop is obtained from the seed offers fewer obstacles than such plants as violets, where transplanting is accomplished by separation, as the latter process necessarily includes taking some of the old soil with the plant. If the violet plants are affected with nematodes it must be clear that the separating and transplanting of the plant into new soil would infest it whether sterilized or not, and result in a crop of sickly plants covered with leaf spots and few flowers. The only method which can be employed at present to control this trouble would be to start cuttings of the violet in sterilized earth, and when the cuttings were ready to transplant to place them either out of doors in some newly turned up land, or land which had not been contaminated with nematode infected manure, or else into earth in the greenhouses which has previously been sterilized.

The manner in which roses are propagated also gives rise to similar obstacles in regard to nematode infection. If the same care is taken in regard to contamination as in violets the nematode problem is one which need give no alarm. Some rose growers in Massachusetts have never been troubled with nematodes. Mr. Montgomery, who possesses considerable skill, knowledge and experience in rose growing, and who has charge of the extensive Waban conservatory at Natick, informs us that they have never been troubled with nematodes upon their roses. They make a practice of using soil composted with cow manure, which is allowed to remain out over winter. There is no doubt that owing to this method of preparing the soil they are able to keep nematodes in check.

Cost of Sterilization.

The expense of sterilizing the soil will largely depend upon one's equipment and the conditions under which it has to be done. If one has a large steam boiler which he uses for heating his houses, then the necessary expenses involved would not be very great. The expense of purchasing tile or steam pipe, if one happens to use such, which in the latter instance would have to be drilled and connected, would be the heaviest to bear. We prefer tile to steam pipe and think they are fully as effective, and then, again, they can be used for sub-irrigation purposes, a practice which, according to those who have experimented with it, gives beneficial results. On the other hand, if one had to purchase a steam boiler, together with the tile, the first expense might be of some account. The 2-inch tile, however, cost about one cent each, or purchased in quantities somewhat less, and are slightly over one foot in length, and a second-hand steam boiler of 4 or 8 horse-power, giving a pressure of steam equal to 40 or 80 pounds, can be purchased for about \$50 or \$60, and would answer the purpose for most greenhouse growers. Larger boilers would be better, as they carry more water, a necessary feature in this kind of work, inasmuch as there is considerable water used up

in heating owing to the condensation of the steam. The soil in a bench 12 inches deep, 15 inches wide and 80 feet long, or, in other words, 100 cubic feet of soil, in which were placed two lengths of tile 2 or 3 inches from the bottom, could be easily heated in one and one-half to two hours' time. The tile in such a bed, we will say, costs \$1.75, and the extra expense for coal would be unimportant. Some further idea of the expense of heating the soil can be obtained from the amount of soil employed and the time required to heat it to 212 degrees F., as ascertained by Galloway and others. According to Galloway, he succeeded in heating about 72 cubic feet of earth in two hours' time. Lobder's beds evidently contained 480 cubic feet of soil, which he heated in three hours, while Rudd's beds contained 600 cubic feet, which he heated in two hours, and, according to Mr. May, he heats 112 cubic feet in one and one-half hours.

Effects of Heating the Soil on the Growth of the Crop.

In the numerous crops of cucumbers, tomatoes and lettuce which we have grown in sterilized earth we have never noticed anything of a detrimental nature, but, on the other hand, a decidedly beneficial effect as the result of sterilization. Not only is this shown in the difference in color which the plants take on, but in an appreciable acceleration of their growth. We have repeatedly run parallel cultures of sterilized and unsterilized soil and have invariably noticed these effects on cucumbers and lettuce. It has long been known among practical gardeners that heating the soil produces beneficial results. Every greenhouse soil contains humus or vegetable mold, and it is recognized by vegetable physiologists that the presence of humus in the soil plays an important part in assimilation and plant growth, but its efficiency depends partly upon the stage of decomposition at which it has arrived. It has been shown by experiments in which plants are treated in one case with humus in the raw condition, and in the other with humus which had been subjected to the action of steam for several hours at a temperature of 212 degrees F., that there is considerable difference in the yield of the crop. It has been found that the same quantity of soil, after the action of heat, yields a crop many times in excess of the former or untreated soil. In other words, by heating we convert the humus compounds in the soil into a more available form for the utilization of the plant. That the heating of the soil gives rise to some changes is shown by its darker color and more porous condition, and it is undoubtedly due to these changes which have taken place in the humus compounds which account for the accelerated and vigorous growth of the plants. Another feature which is characteristic of sterilized soils is the unusual occurrence of humus loving plants, or saprophytes, that grow upon it, which is a good indication that the organic matter contained in the soil has undergone changes through the action of the heat. We have ourselves observed more than once certain species of saprophytic fungi growing upon our steamed beds which have never shown any tendency to grow on unheated soil, although, with the exception of being steamed, the soil was exactly the same as that upon which they never appeared.

Wreath Sent to the Funeral of Queen Victoria by Mrs. Garfield.

Effects of Heating the Soil Upon Other Greenhouse Pests.

Besides the destruction of nematode worms, and the gaining of robust and vigorous plants which steaming the soil gives rise to, there are other beneficial effects worthy of being taken into consideration. Many of the fungous and insect pests to which our greenhouse plants are subject find their normal habitat in the soil. In our experiments upon heating the soil in the beds we killed thousands of red spiders, and we presume that we did the same with the cucumber aphid, or with the eggs, as we were remarkably free from them, although the soil had previously been used for cucumber crops, which were badly contaminated with aphid. This latter statement, however, in regard to killing the aphid, is nothing more than a conjecture, as entomologists tell us that they do not know where the aphid breeds, but they surmise that it breeds upon par-

ticles of organic matter in the soil or upon the old cucumber vines thrown out upon the compost heap. The soil undoubtedly harbors many of the spores of the mildews which are common to cucumbers, tomatoes and lettuce.

One of the most common and troublesome diseases to young cucumbers is the so-called "damping fungus," *Pythium Debaryanum*, which attacks the young plants at the surface of the ground and causes them to wilt and collapse. We have repeatedly found as a result of heating that this did not make its appearance when they were subjected to a temperature which was over 140 or 150 degrees F.; when, however, the temperature went below these points the fungus appeared to be accelerated in its growth and development and damping was more likely to show itself than in normal pots. This fungus must be distinguished from the ordinary "damping fungus" (*Botrytis*) which attacks begonia cuttings, etc., in the propagating pit. Sterilizing the

soil for this fungus would be of no account, as the spores (conidia) of this species are everywhere and only await a favorable opportunity to germinate and develop themselves, whereas with the *Pythium* the conditions of dissemination are much more restricted. What is true in regard to the *Botrytis* is probably true in regard to some of the mildews, as there is no reason to doubt that the spores can thrive in the house for some time without coming in contact with the host, although sterilizing the soil would undoubtedly kill many of them. The so-called "drop" in the lettuce which is caused by a facultative parasite, a species of *Botrytis*, is also completely controlled by sterilization. This fungus causes no end of trouble to some lettuce growers and is confined entirely to the soil where it propagates only by means of its mycelium, but it frequently becomes disseminated from one part of the house to the other by means of the gardener's tools. Sterilizing the soil has also an effect upon

the clover and grass seeds which constitute more or less of a mixture in a soil. The difference between a heated soil and one that is not heated is very marked indeed in this respect. In the beds which were heated at 204 degrees F. there were no weeds or grass seeds to trouble us and the only things appearing were one or two clover plants. The seeds of the clover appear to be more resistant than other seeds and their presence can be accounted for probably by the fact that the temperature at certain points did not quite reach 204 degrees F. In the beds that were not heated we had under a number of crops of weeds as the horse manure which was mixed with our soil was largely contaminated with seeds.

Notes From Other Stations.

Florists should not be led by the article on sterilization of soil in your issue of May 1 to believe that sterilizing the soil will keep it entirely free of nematodes and other soil pests, such as fungi and some species of insects. Some plants, such as begonias, ferns and some geraniums, have their stems and leaves infested with nematodes, and heating the soil would have no effect whatever upon these, even though the cuttings were started in the sterilized soil. In the case of plants which have simply their roots infested with nematodes care must be exercised to grow these, if propagated from cuttings, in sterilized soil. Transplanting them from infested soil to sterilized soil will not help matters. In the case of insects, as well as with nematodes, they are liable to be carried from the field to the benches upon plants grown out of doors. All the above conditions apply to fungi as well, hence heating the soil with the idea of keeping the plants free from insects and fungous troubles is applicable only to plants grown from seed.

The statement that heating the soil will thoroughly renovate it must be considered merely an assumption and should be thoroughly tested before being put into general practice. It is undoubtedly true that sterilizing the soil by means of steam makes the plant food contained in the soil more soluble; at the same time it puts the plant food into condition to be carried away more rapidly by means of water. Furthermore, it has long been considered a bad practice to grow plants a long time in the same soil, no matter what its condition as to fertility.

Notwithstanding the fact that sterilizing the soil by means of steam has proven itself an excellent method not only of keeping plants grown from seed free from nematodes, but also free of "damping off" fungi and "stem-rot," it should be remembered that this does not apply to plants grown from cuttings, or grown in the open field, nor does it prevent the winged adults of cutworms, white grubs and wireworms migrating into the houses and making their headquarters in the sterilized soil. Furthermore, the expense of treating large quantities of soil must not be overlooked. F. A. SIBBINE, New York Agricultural Experiment Station, Jamaica, N. Y.

Your clipping upon "Sterilized Soil" is received. It seems to me that every word of it is true and wholesome advice. While not carrying out any experiments on a large scale, from lack of opportunity I feel confident that all those who have

much glass and serious troubles with root glands caused by nematodes, should give the matter of soil sterilization most serious attention. BYRON D. HALSTED, New Jersey Agricultural Experiment Station, New Brunswick, N. J.

Replying to your request for my views concerning the sterilization of soil, I would say that I consider the subject well worthy the attention of the commercial grower of greenhouse products. Its feasibility and economical application depends largely upon the equipment of the establishment. In those where steam heat is employed the cost of application would not be so great as in those where hot water is used for heating purposes, as in the latter it would necessitate the purchase of a steam boiler. So far as I am able to learn, wherever the soil has been thoroughly sterilized there has been a decrease of fungous troubles, as well as injury from all worms or nematodes, and, in consequence, a much more vigorous growth of the plants has been obtained.

The sterilization of soil in a box, as mentioned by Mr. W. W. Rawson in a previous issue of your paper, is not an economical method if one has much of it to do. His proposed plan of piping his beds with perforated steam pipes, while perfectly feasible and more economical of labor, is not, in my opinion, as desirable a method as that of using ordinary porous 2 or 3 inch tile. The latter method was first employed by Galloway (Am. Gard., 18, 127, 1897), and later enlarged upon by Messrs. Stone and Smith (Bull., 35, Mass. Agr. Coll. Hatch, Exp. Sta., 51, 1898). In both instances satisfactory results were obtained. The drain tiles are laid in the bench or bed in parallel lines, connected at the ends, a foot to 18 inches apart, and at a depth of from 6 to 12 inches, the latter being dependent upon the depth of soil to sterilize.

One advantage of the tile over that of the perforated steam pipes, claimed by Messrs. Stone and Smith, was that the tile could be used for sub-irrigating purposes and thus made to serve a double purpose. To this I would add that the tile will also serve as conductors of air through the soil, and thus afford better root aeration of the plants, a factor in sub-irrigation of about equal importance to that of the application of water. Hence for this reason and the ease with which the tile may be laid, I prefer the use of tile to that of the steam pipes.

WILLIAM STARR,

Indiana Experiment Station, Lafayette, Ind.

ENGLISH FLORAL WORK.

Last week we gave a group of floral arrangements prepared for the funeral of the late Queen Victoria, but they were reproductions from engravings which had been much reduced from the original photographs and there was but little detail, though giving a general idea of the style of arrangement prevailing among London florists as to funeral designs.

This week we present two plates engraved from photographs we have secured from London at some little trouble and expense, showing two arrangements sent to Her Majesty's funeral by Americans, though of course arranged by London florists.

The first is a wreath sent by the widow of former President Garfield, and it is

truly a beautiful arrangement. The way in which the calla lilies are delicately veiled by the asparagus, the use of the croton foliage and smilax sprays and the loose placing of the violets all appeal to us as excellent.

The second engraving is from a large photograph of the huge cross sent by United States Ambassador Choate, regarding which much has been said in the daily press. It certainly contains an immense amount of choice material, but it surely is not representative of American floral art, at least as it exists today. It might serve for a model of what was considered the proper thing twenty years ago. However, the picture is interesting and we have reproduced it with as much detail as possible so the florists of America could judge for themselves as to the merits of this design. The English papers, by the way, refer to all such arrangements as "wreaths," even including this cross under that title.

LANDSCAPE GARDENING AS A PART OF THE FLORISTS' BUSINESS.

By ROBERT B. CHIDLAND.

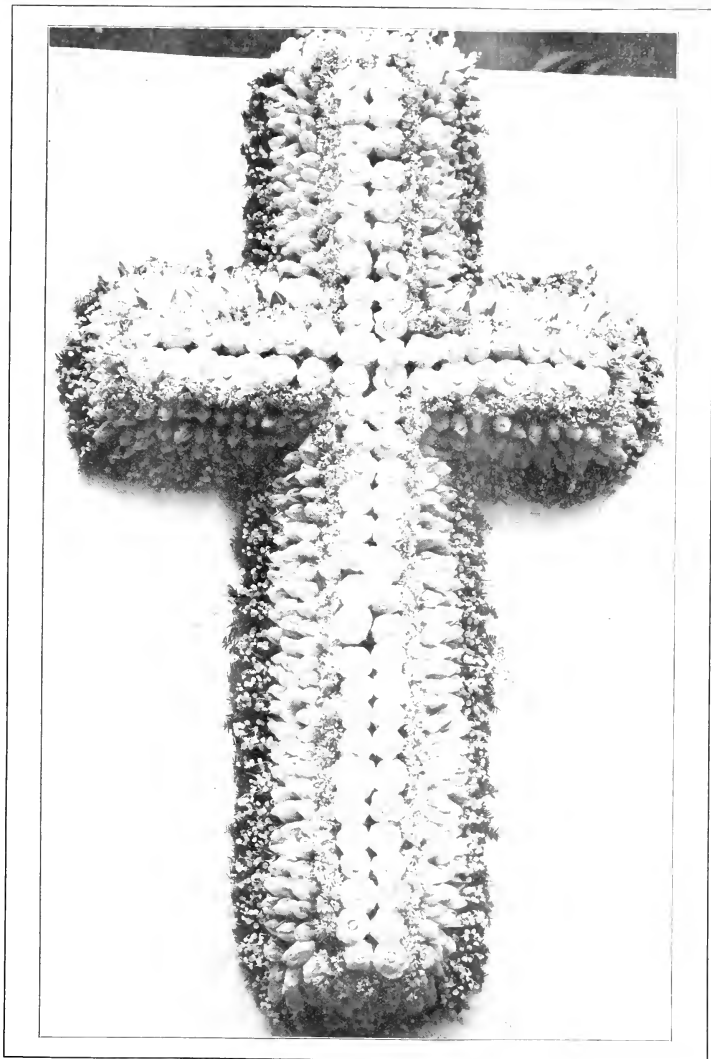

(Read before the Philadelphia Florists' Club, May 7, 1901.)

When accepting the honor which your committee conferred in assigning a subject on which to prepare and read a paper before this club, I realized to a degree the difficulty of writing from a business point of view in disregard to those talents that make the "gardening art" a profession rather than a commercial enterprise. Therefore, in hopes of making a more interesting paper, have taken greater latitude than the title implies.

The desire of people to beautify their surroundings has become more general here within recent years than at any other period. We have awakened from the old stereotyped methods, to realize the possibility of design in the adjustment of the house, roads, paths and other adjuncts necessary to the convenience and comfort of the home. We may have utility without sacrificing beauty; every feature is considered as to its particular fitness, and each arranged with regard for the whole.

The house site is selected with consideration for health and beauty; exposure must be bright and sunny, the ground properly drained and the water supply good. Prospect and aspect, the views to those within and those without must be well pleasing to the eye. Roads must be as direct as possible, and conform to the topography; should the grades be rolling and steep, a circuitous drive will be essential to attain an easy ascent. The same may apply to paths; when, however, the ground is comparatively level, long winding roads or paths, with sharp reverses, are in bad taste, and we should not condemn anyone who takes to the turf where such exist. The entrance gates are also to be considered. These should be simple in outline and broad in effect; the piers set at right angles to the drive, and where discrepancies of distance from highway to piers occur the same should be made up in the wing walls.

The designing of the grounds as regards planting requires considerable thought. Sometimes an entire new scene must be created, while at others it is only necessary to embellish that which

Cross Sent to the Funeral of Queen Victoria by United States Ambassador Choate.

already exists. Vistas are to be made by planting, or to be opened by the judicious use of the ax. In either case a thorough knowledge of what nature has

used in the building of her landscape is essential. The hills are to be explored to ascertain the various trees and shrubs that exist; also the lowlands and the

water's edge. On high elevations will be found the oaks, poplars, maples, ash, chestnuts, pines, junipers and others; this will suggest what to use under sim-

lar conditions. Take also the sweet gum, red maple, magnolias, alders, with others will indicate what to use on low grounds. Close to water we find the willows of various tints of gold and red bark, and the variety *babingtonia* of airy graceful foliage, dipping its branches into the very stream. This is nature's guide, and if followed will give us harmony at least.

Ingenuous man, however, is not satisfied with the indigenous, so the catalogue must be increased to numerous importations. Here is an easy channel to err; like the boy with his first box of crayons, we are tempted to use too many varieties, scattering them throughout the plantations with no more serious thought for the combinations of color. The plants should be arranged in harmonious masses, and each located with regard for its particular beauty at different seasons. Nature has given us material in the form of leaf, flower, or fruit with which to decorate the landscape at all seasons, and as the flower of one variety is fading another is appearing, thus it continues until fall, when the foliage assumes its richest attire; and after the leaves have fallen the fruit and twig still brighten the aspect.

In arranging the masses of color, those at a distance should be larger than those closer to the eye. Clumps of the same colored flowers should not be repeated too frequently, or it will give the appearance of spottiness. On observation we frequently see the lack of judgment in distributing single specimens over the lawn. Recently was counted at least forty plants of *spirea* and *forstythia* on a small place in as many different positions, and all visible from one point. This, as you may imagine, was not very pleasing.

The foregoing refers to the framework of the grounds, and touches only in the most brief manner a few of the many points to be considered by the landscape gardener. Whether the work be great or small, we must apply the same fundamental principles, judgment and taste. And it would seem that the more familiar the florist becomes with those impulses which inspire to better methods of design in landscape gardening, the more artistic will be those embellishments which are within his province. Whatever we do let it be done with a purpose; if a tree is to be planted for shade, place it where it best serves that end. If the space will not permit of planting one of spreading habit, use one of pyramidal growth.

The planting of many large growing trees on small grounds is not wise, nor should they be placed closer than twenty to twenty-five feet to the house. Never plant a specimen because it is attractive, unless a suitable place can be found for it. Consider ultimate size and the general appearance of the whole. It is better to map out a scheme with a system regardless of the rendering of the drawing. A lay-out may be depicted crudely on paper, and yet be highly satisfactory when realized on the ground.

Specimen plants should be isolated, as they are not generally necessary to the picture as a whole. In the planting to screen offensive objects, use the hemlock or spruce; as a summer screen privet is better, or vines, the *delicoides* being particularly useful in making a quick screen over a lattice. We have learned a lesson from the wanton mutilation of

street trees by the telegraph and telephone companies, which would suggest, where practicable, to set them back of the building line. Then the leader will be spared at least, and if cutting is found necessary it may be done symmetrically.

When the grounds are small and the straight lines predominate, the flower beds should be located in geometric fashion; what is done on one side must be duplicated on the other. The beds should be placed close to the house or the border planting, for they appear best with a background. Brilliant colors should only be used when they are surrounded with abundance of green and dark shadows. Planting at the base of the house is infinitely better than cutting beds in the turf. When thus treated use only the cleaner, free growing sorts.

Herbaceous plants, as a rule, are not suitable for this purpose, and some varieties are as much out of place as a colons bed in the woodland. These should be scattered through the shrubberies in borders, along the walks of the vegetable garden, or in a flower garden especially provided, where one may cut at will for indoor decoration. There are exceptions, however, and per-

haps all have appreciated the perfect harmony of the larkspur, delphiniums, hollyhocks, geronies and monkshood scattered in a natural manner around the base of a building of the old farm-house type. *Veronias*, *asters* and *soldagos* seem most suited to the borders of the woods.

The demand for perennials is becoming more general, and in a measure they are supplanting many of the bedding plants. Therefore, it behooves the florist to familiarize himself with the best adaptation of these invaluable plants, and gain even greater distinction than he possessed as the author of the pattern beds.

In closing, whether we are florists, nurserymen or landscape gardeners, let our work be the faithful representation of what may be done in helping nature, and though commercial interests must be a factor, there is no legitimate reason why it should be a barrier to good design. Let us have a brotherhood, at least, through the genius of which the world may be made more beautiful by the conferences and intermingling of thoughts on this the most delightful of vocations, "Landscape Gardening."

MISCELLANEOUS SEASONABLE HINTS.

Bedding Plants.

The next big business will be filling the flower beds, and with us veranda boxes and vases. Nearly all flower beds are of some geometrical design and with the material we use for filling them they can hardly be anything else. Shrubby should never be planted in formal beds or straight lines, and fortunately they seldom are, and the trees dotted round the lawn take off the stiffness of the flower beds. Do not wait till the first of June, telling people it is not safe, but use discretion. You will have people asking you for panicles on the first of June when they should have had them to cheer up the garden all the month of May. I can only write with the knowledge of the weather of our latitude, and do not pretend to advise those in Chattanooga, Tenn., or Bismarek, Dakota.

Some thirty years ago, being young and green and not knowing our climate, I planted out quite an extensive flower garden from the 12th to the 15th of May. The colons and *achyrantes* did not grow very fast but not a plant was hurt, and it is only one season in ten that we get any real frost after the first of May, but cool nights are an injury to real tropical plants and those there is no advantage in getting out before the last days of the month. Then again a lot of our bedding plants (and the leading ones) are not tropical, and if the thermometer goes down to 38 or 40 not the slightest harm is done. All the zonal geraniums, *verbenas*, *petunias*, sweet alyssum, *geranium*, *centaurea*, *lennon verbenas*, *lobelia* and most all plants that you have been growing in a cool temperature, should go out at once,

and I can tell you if you can get a few thousand of your zonal geraniums bedded out it is a great relief.

There are some plants that like cool weather, yet the slightest frost is death to them, notably the dahlias, cannas, *caladiums*, colons, *achyrantes*, *alternanthera*, *acalypha*: Wait until June 1. Speaking of dahlias, some of the expert growers do not plant till the first of July. The idea is, I believe, that if planted early they get stunted in July, while if planted late the cooler weather comes on while they are making their vigorous growth and helps them to maintain a vigorous growth.

Planting.

I have often had occasion to speak about what I consider the correct method of planting, whether it be an elm tree or a geranium. It takes longer to plant properly and carefully, but if you wish the best results it is time well spent. Most of our patrons have their flower beds rounded up much too high to look well and far too high for the good of the plants. Now supposing an eight foot diameter bed has a rise of nine inches to the center. How long will it take before you could water that bed enough to soak down six inches? It would take hours. So you should water thoroughly when they are planted, and that can only be done by putting the plant in the hole, putting sufficient earth around the ball to firm it, and then giving it a good soaking. When the water has soaked away fill in the hole with dry earth, which acts as a mulch. This is worth a dozen waterings on the surface. Men you send out to plant beds are sometimes in a great hurry and just stick the plants in with

the remark "That's good enough." Insist that it be done properly.

The hose is a great help to us in our dry seasons such as last year, but it is sadly abused and should only be in the hands of a gardener. While water and litium is all right for the sunsets it is often the ruin of geranium and coleus beds. In the former it spoils the flowers of geraniums and induces a leafy, soft growth with little flower, and with coleus it makes a long, rank growth, just what you don't want.

Veranda Boxes and Vases.

You should be prepared at this time with a very large pile of very rich soil if you fill many veranda boxes and vases, for we use up a great deal of it. It is necessary that it should be very rich and if you don't have plenty of rotted manure you can use bone meal. In a veranda box of 10 or 12 inches wide we use about as many plants as would fill a border three feet wide. This crowding I am aware is wrong, but people must have immediate effect and this crowding means that before the summer is over the soil is one mass of roots, so make it rich. This is a great city for veranda boxes. People prefer them to cutting up the lawn in front of their houses, and it is admitted by all who visit our city to be a great embellishment to our residence streets.

There is one trouble about them; we started the price too low some years ago and it has been almost impossible to raise it. In figuring up the plants we find that they amount at retail to quite as much as we get for them in the boxes, and our labor and soil and mess thrown in. But against that we must consider that we are not selling them at retail; it is as good as wholesale and better, for we use what we choose and it helps to clean up lots of stuff for which there would be no sale. We get for boxes eight to ten inches in diameter 75c per running foot. We ought to get \$1.00. At the former price you can live and go to the annual convention. At the proper price you might gain a "moderate competency" with fifty years' strict attention to business. It's not nearly as good a business as being successful with American Beauty roses, but we can't all be that and some must be satisfied with the plebeian end of the business.

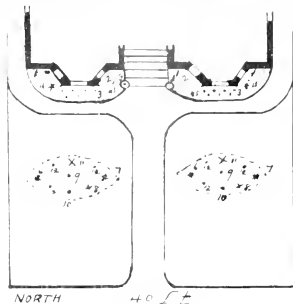

Outdoor Tulips.

We are often asked just now, "what shall we do with our tulips to have them flower next year?" Now the best answer is to tell them to throw them away and buy more next year. The fact is, while flowering or just after the bulbs are building up the growth that gives us the flower the following year, and if dug up and dried off as soon as the petals are dropped is treating them badly. If you expect to have flowers next year the bulbs should be left in the ground till the tops are about dried up and that with early tulips is at least the first week of June. If the bulbs are planted deep there is no better way than to leave them in the ground and plant your summer flowers without disturbing the roots. If you lift the bulbs dry them off well and store them away.

WILLIAM SCOTT.

HARDY PLANTS.

The accompanying plan indicates a double bay window house, north front, standing at the street level, on a lot 40

Key to Plan.

1. Cornifolia Claviflora
2. Convolvulus maialis
3. Heperata acutifolia
4. Eulalia grandifolia
5. Anemone caudex

6. Paeonia officinalis
7. Phlox paniculata
8. Morisella virginiana
9. Campanula Van Houttei
10. Homocentrus cutifolius

11. Clematis integrifolia
12. Anemone pulchella
13. Euphorbia

feet wide, with only a narrow walk at each side of house.

All plants included in the design are herbaceous and all will reappear each spring. If desired, some bright colored late flowering annuals can be planted beside the early blooming perennials to help the show for the latter part of the summer; petunias, verbenas, annual phlox and candy tuft would serve the purpose, and a few plants of *Salvia splendens* brighten a garden wonderfully. These annuals will not hinder the reappearance of the perennials the following spring.

The two beds could be slightly raised or a low border of boulders might be placed around them and the interspaces set with any of the hardy ferns.

There is a certain degree of formality in this design which cannot be avoided. To attempt to make it irregular would be merely an affectation.

JOHN HIGGINS.

ED. FLORISTS' REVIEW: As you ask for criticisms of the planting plans, by Mr. Higgins, I would suggest many changes in the plan for a lot 50x100 in your issue of May 9.

In the narrow bed at back of the lot the ends are planted with purple barberries. I think purple trees and shrubs not being normal colors, should be used only for contrast effects. Planted as proposed the bed would be bare, the central perennials starting late, though contrast with garden asparagus in July would be good. I would prefer to make an irregular bed widening at the upper right hand corner and plant *Cornus sibirica*, golden willow (kept cut to a shrub), single kerria, purple barberry and *Spirea aurea*. Then I would relegate the aquilegia to this bed, it has no place in a conspicuous bed in front of house.

If paeonies are desired, space them well and plant *Lilium superbum* between, and in front plant *Gaillardia grandiflora*, thus giving continuous bloom to frost. I would leave out the purple barberry (2) opposite (6) for reasons before stated. And *Forsythia suspensa* has no place in so narrow a bed with walk at side. If *Forsythia* is desirable in such a narrow

lot, which I doubt, use *F. Sieboldii*, a more compact grower. I have seen *F. suspensa* cut down this spring (30 years planted) that had spoiled the grass in a circle 40 feet in diameter.

I would rather use a finer foliaged shrub like *rhodotypos* for 17 and 18, planting *Lonicera tatarica* alba and rubra in place of Japan quince. The dwarf trees are all right unless the weeping mulberry is tender. It is apt to kill back in exposed situations. A tree lilac—*Syringa japonica*—would be better.

GEO. L. CLARK.

Newtonville, Mass.

CHRYSANTHEMUM NOTES.

Cuttings should be rooted now right along as time and space can be found for the operation. The earlier rooted stock can, if necessary, be topped now, and such tops make very fine cuttings, because they are in a nice, healthy, vigorous condition.

Of course, it is a severe check to a plant to be topped in this manner, but if care and common sense are employed in the operation the plant will very soon recuperate. Such plants can be planted out, if desired, and several shrubs taken up or they make very useful plants for growing on in pots and flowering in an 8 or 9-inch pot, leaving as many stems as the condition of the plant warrants, and your knowledge of what your market calls for as regards quality may suggest.

Cuttings rooted from now on are best kept to single stem. Many propagating houses at this season get pretty hot during the day, and a better place for rooting cuttings is a cold-frame placed in a sheltered position under a north wall, if possible, if in a position where the sun will strike it, the glass should be shaded during the day. The main point to be observed is to keep the foliage of the cuttings from wilting and to this end they should be frequently syringed and liberally watered. If allowed to wilt too much the cuttings will get dry and hard and will not root satisfactorily, neither will they make as good plants if they do

root. Nights when the air is mild and still the sash can be taken off the frame and the cuttings will be greatly benefited by the cool, moist night air.

As cuttings are rooted, they can be potted up and left out in the frames until needed for planting; indeed, they are much better off out there than in the houses, providing they are within easy reach of the hose. Plants in small pots dry out very rapidly when the sun is hot, and a brisk drying wind is blowing. If stood rather closely together they will not dry out so rapidly, but don't forget that if you stand them too closely they will get drawn up, thin and long jointed, a condition to be avoided above all things.

Some of the new ones are making nice growth, my favorite of the newer lot being Nellie Pickett, which is one of the neatest habited varieties that has been sent out for some time. Owing to the loose conformation of the flower this variety will probably never rank very high as a purely commercial variety, but the man with a home trade will make no mistake in growing this very handsome variety.

Eaten is doing nicely and is, we understand, to be largely planted, so will in all probability be largely in evidence at the fall exhibitions. Mrs. Elmer D. Smith and Mrs. Barkley are also bidding fair to render a good account of themselves.

Iolantha is nothing to boast of, but it has lots of time ahead of it yet.

Specimen plants should be potted on from 6 to 8-inch pots as they are ready for it, using good fibrous loam with a little green sod over the drainage in the bottom of the pot. The plants should be kept closely pinched to encourage as many "breaks" as possible, and frequently syringed to keep the wood soft.

Just your plants over frequently with tobacco dust, or spray with the liquid extract, to keep down the black and green fly. The green fly I regard as worse than the black because it disfigures the foliage much more if not kept down. BRIAN BURT.

CARNATION NOTES.

By this time you have all your carnations in the field, and the hardest part of the work is done; but if you want to have good plants to house early you must look after them right along. Begin at once with the hand cultivator, or the hoe, and work the surface of the soil between the rows. As soon as we finish planting a considerable patch we go through with the cultivator to loosen up the soil, which gets packed more or less from walking over it in planting. After that we cultivate at least after each good rain, and if it does not rain for a week or so we go over it again anyway. Keeping the soil stirred is far better than watering. I have never been obliged to water carnations in the field because I have always been a firm believer in cultivating.

Some of the first ones we planted are throwing up shoots and pinching must be looked after closely from now on. Such varieties as Mrs. Bradt and White Cloud need close watching to keep them bushy. We will have about six weeks of good growing weather yet, and in those six weeks you want to produce the

body of your plants so they can throw strong flowering shoots later on.

A. F. J. BAUER.

PAN-AMERICAN ROSE SHOW.

On account of May 20 being dedication day at the Exposition, the date for the opening of the exhibition of tender roses has been advanced one day and it will open on the 20th instead of the 21st, so as to give the immense number that will be in attendance on dedication day a chance to see the roses. The exhibits in place on the 20th will probably be viewed by the largest concourse of people that has ever enjoyed a display of roses in this country. The classes and rules and regulations were printed in our last issue.

All entries should be addressed to William Scott, Horticulture Building, Pan-American Exposition, Buffalo, N. Y.

PHILADELPHIA.

The Market.

The cut flower market is in very bad shape indeed. There is a fair amount of business being done for the middle of May, but there is an immense amount of stuff coming in; so much so that at least one commission man had not vases enough to put all his flowers in water when they arrived. Even sweet peas do not sell on sight, though they move pretty well. Last week we had a great deal of rainy weather, which has been rather hard on all stock, especially sweet peas. This week has begun more auspiciously in point of weather. It is hardly worth while to quote prices at present.

Bedding Plants.

The fateful 10th of May has passed and this week finds the bedding-out season in full swing. Heretofore the work has been chiefly on a small scale, but now the big beds that have been gorgeous with hyacinths, daffodils and tulips are nearly ready for their second planting. An exception to this is seen in some fine late beds in favored spots, and in the beds planted with the plum-colored tulip Gesneriana. This variety is exceedingly handsome and although a single, very durable, remaining in perfect condition for a long time when the weather is favorable.

Some very effective beds are seen planted with tulips and pansies; where separate colors are used this combination gives scope for great variety of rich effects.

Thaddeus N. Yates & Co., of Mt. Airy, have a large stock of bedding plants.

Various Items.

John Burton has a well grown lot of young Beauties in small pots. The sash bars are up on his new range of glass.

George Leiker, of Lansdowne, has five houses devoted to carnations with the exception of one bench each of sweet peas and callas in pots, which have paid well. His carnations include Jubilee, which he considers the best red, and which looks well; Ethel Crocker, Mrs. Bradt and a white seedling of his own, a free bloomer of fair size and stem, not intended for dissemination but for own use.

Casper and George L. Pennock have

broken ground for two new houses. It is understood that they intend planting Beauties exclusively this season.

Joseph Bevis is cutting very fine Brides and Bridesmaids from two-year-old plants in solid beds.

David Anderson has one Beauty house planted and will plant the other this week.

It is rumored that both Charles S. Price and F. W. Whiteley will plant little or nothing besides American Beauties this season.

We have all noticed the steam ash-lifter that works so well in transferring the ashes in an endless chain of little scoops from the cellars of the City Hall to the wagons on the street above. Such an arrangement would be a boon in many of our greenhouse plants. It was said that Mr. Montgomery had an economical method for the work in operation at the Waban Conservatories; certainly our methods here are crude and old-fashioned. Will not some of our bright inventive minds give us an adapted form of these endless scoops that our steam boilers can run, something simple and not too expensive?

The feature of the Germantown Horticultural Society meeting last Monday evening was the vanilla orchid beans exhibited by Michael Punch, gardener to Roberts Le Poutelier. Addresses were delivered by Edwin C. Sellett and George Redles. The June meeting of the society will be a notable one.

PHIL.

BOSTON.

Trade Conditions.

A tremendous cut of roses and an even larger one of pinks is coming in, and there is also quite a supply of a mixed variety. Heavy sales are made, but at a very low figure, and every street corner has a busy fakir forcing goods upon the public at the lowest rates yet touched, even by them. And we must expect things to keep this way for a couple of weeks, I presume.

Green material of all kinds except adiantum has been scarce for a few weeks, and hardy ferns were really out of the market for a few days. But Henry M. Robinson & Co. have now received heavy shipments from the South and can now supply an unlimited quantity. They expect to handle three millions of them before the middle of June. These figures are big enough to interest Morgan or Carnegie.

Various Items.

J. J. McCormack has opened a plant auction at the corner of Franklin and Oliver streets. He puts out a brave little flier announcing a great variety of goods and advertising sales every Wednesday and Saturday at 10 a. m., to be continued as long as they are well attended.

A few years ago two brothers, George and Arthur Delay, were well known to the florist trade of Boston. George was on the ill-fated steamer "Portland" and his body was one of the few washed ashore. A few days ago Arthur died of consumption, with which he had been suffering for several months. Through the kindness and thoughtfulness of Henry M. Robinson, our leading dealer in hardy supplies, a fund of over \$100 had lately been raised for him, which

CHICAGO.

The Market.

The continued cool weather together with the fact that quite a number of houses have been replanted, has resulted in somewhat reducing the supply, especially of roses, but demand is still weak. While some extra select tea roses are held at as high as \$6 the top limit will be more generally recognized as \$5, and the average range is from \$2 to \$5, with the heaviest emphasis on the lower figure. In fact, "punk" aggregations have been cleaned up at as low as \$1. First class Beauties hold their own very well, but they are precious few in number, while there is a big lot of stuff that serves as a horrible example and brings what the buyer offers.

In carnations a few very extra selects are held at \$3 and \$4, but they are so few they are hardly worth mentioning. On good carnations \$2 is practically the top price, while really good flowers can be had at \$1.25 to \$1.50, and the great bulk of under grades goes at 40 to 75 cents.

Lilac is now coming in freely, and is moving fairly well. Parrot tulips are also beginning to come in and sell very well at \$4.00 per 100. The arbutus season is about over. Tulips are doing a trifle better, but \$2 is about the top price. The supply of lilies has shortened materially, and good ones now go very well at \$4 to \$6, and we hear of some sales of extra at as high as \$8 and \$10.

Various Items.

The program for the regular meeting of the Florists' Club, to be held to-morrow (Friday) evening, includes a paper on growing the cyclamen by Paul Koppanka. Other essays are also expected.

Herman Schiller, the well known West Madison street florist, died at 10 o'clock last Sunday morning. He had been in poor health for a number of years, though still able to attend to business up to shortly before his death. He was 49 years of age and leaves a widow and six children, the latter aged from 20 to 12. He was laid to rest last Tuesday in the funeral parl at Niles Center, the services being held in the city in the morning, which were attended by numerous friends in the trade. Mr. Schiller was born in Germany, and came to America in 1879, when he established himself in the greenhouse business at Niles Center as a member of the firm of Schiller & Kuske. Later, when his inflammatory rheumatism became chronic, he established himself in the city and the greenhouses, which he eventually owned entire, were finally sold and are now conducted by Mr. John Brod. He was also successful as a storekeeper, and leaves an estate of considerable value. The business will probably be continued by his widow, under the management of the able corps of assistants, of which Mr. Geo. Asmus is one.

Bassett & Washburn have already replanted about half of their Beauty houses. They report carnations in the field, of which they have about five acres, as doing remarkably well. Mr. and Mrs. Bassett are now sojourning at Battle Creek, Mich.

Mr. W. H. Elliott's New Asparagus House.

must have been of some assistance to him during his closing days.

Those stone statues upon old Horticultural Hall surely have been getting their full share of attention lately, not only from the newspapers but from the general public. A big crowd gathered one day to see them lowered by a big derrick. They were on their dignity, and insisted on coming down very slowly indeed. I never bothered myself to wonder whom the figures represented, but it seems that the goddesses of fruits, flowers and grains, Pomona, Flora and Ceres, respectively, were the lucky people. The "Globe" says they are to be removed to the new hall.

W. H. Elliott has been making quite a systematic search for real estate suitable for a combination summer home and an enlargement of his rose-growing business. A few days ago he purchased 180 acres of land and a large brick house at Madbury, N. H., which will make an ideal summer home when alterations now under way are finished. And, as Mr. Elliott considers himself an expert in the selection of soils, it is probably fully as safe to say it will make a valuable addition to his business whenever he gets ready to erect greenhouses. The property is particularly well situated to accommodate shipping interests toward Boston.

Two more florist stores have closed up on us—M. Thompson, Mason street, and Lawson & Taylor, on Boylston street. The last young lady to close up, some few weeks ago, chased up her creditors indefatigably until she found and paid each one, but her example has not been followed this time by the lady in the case. It is said that Lawson & Taylor are to reopen. J. S. MANTER.

AN ASPARAGUS HOUSE.

The engraving is from a photograph of part of the new addition Mr. W. H. Elliott, Brighton, Mass., has just made to his extensive asparagus houses.

The house is now 200 feet long and 110 feet wide, containing about 600,000 cubic feet. It is built on a side hill, and from the lowest point in the front to the highest point at the back, is 50 feet in height. This immense structure is supported by wrought iron pipe, the main supports being 11-2 and 11-4-inch pipe, branching into 3-4-inch at the purlins. The woodwork is cypress throughout, and the house is glazed with 16x24 glass. There are 13 beds in this house, each about 4 feet wide, with 2-foot walks running between. There are, also, 2-inch plank walks run overhead, the whole length of the house, every 7 feet from the ground up; these walks help to strengthen the structure, as well as being necessary to use in training the vines. The uppermost planks are used for growing chrysanthemums and Asparagus Sprengeri, the latter being grown in long, shallow boxes containing 2-1-2 inches of soil; these boxes are 2 feet apart, just allowing enough light to reach the asparagus underneath, while at the same time shading it and keeping the house cool and moist at the top, thus preventing the growth of red spider, which is one of the most destructive pests encountered in the growing of asparagus.

The vines are trained on linen thread, attached to wires made fast to an iron trellis about 2 feet above the ground, 8 inches apart, and at the top an equal distance, in order that the strings may be as nearly straight as possible.

This house is heated by steam, one 6-inch main supplying the radiating pipes, which are distributed overhead throughout the house; in all there are 23,000 feet of pipe used in trellises, supports and heating the house.

PEKIN, ILL.—Geo. A. Kuhl is rebuilding inside of houses, putting in tile benches. Has planted a house of Liberties and one of Bridesmaids this week. Business is fine. He reports having put into propagating bed this season over 100,000 cuttings of roses.

There is a feeling among some of the growers that the time has come to take steps to prevent the ruinous competition in the market at times of glut. One suggestion is that the growers get together and agree upon a bottom limit at which flowers shall be sold any left when the market has taken all it will at that price to be destroyed. The suggested bottom limit is \$1.00 per 100 on roses and 80 cents per 100 on carnations. It is believed that this would not only bring the grower more money on the average, but would protect the retailer from the worst of the competition by the faker.

Kennicott Bros. Co. made an arrangement with Klehm's Nurseries to bloom 5,000 longiorum lily bulbs for Decoration Day, and expect the cut for that day will be about 10,000 flowers.

The preliminary list of premiums for the annual exhibition of the Horticultural Society of Chicago, to be held next November, has been issued. Copies may be had by addressing the secretary, Room 1002, 185 Dearborn street.

Alexander Rodgers, the seedman, 220 Johnson street, has filed a declaration in bankruptcy. His liabilities are placed at \$63,000 and his assets at \$26,000. The Chicago Title and Trust Co. has been appointed receiver. A heavy decline in timothy seed last fall is said to have been the cause of the failure.

The board of education has decreed that flowers shall be barred from the graduating exercises at the public high schools, but some of the daily papers are criticizing the action so vigorously that a reversal may be looked for.

The Geo. Wittbold Co. arranged a very elaborate wedding decoration at the Germania Club last Monday, regarding which we shall have more to say next week. They also put in an elaborate decoration this week for one of the large department stores, wild smilax and palms being the main features.

It is reported that Mr. J. D. Thompson is to sever his connection with the Chicago Carnation Co. July 1 next.

Bowling.

The second series of games in the local league contest was played at Worden's alleys last Tuesday night. The Growers won from the Wholesale and the Seedsmen got the best of the Retailers. The scores follow:

F. Stollery, of the Growers, had the high average (184) in the three games and won the copy of the Florists' Manual offered by the Florists' Review. F. F. Winterston and C. Ballouf each won a dollar prize for score of 200 or over.

SET FUNERAL DESIGNS.

EDITOR FLOWERS' REVIEW: Will you kindly permit me through the columns of the REVIEW to make a few remarks regarding "set pieces for funerals." I have noted, both in sorrow and in pain, from time to time, cuts and descriptions of funeral designs in your esteemed journal and I suffered in silence, contenting myself by gazing my teeth and swearing at deluged customers, but there is a limit to human endurance, and when I saw in the pages of the REVIEW of April 26 a cut of an open book and a written description accompanying it, I looked for an ax, for some one needed it, sure.

Just to show how ridiculous some florists are I will explain: The book in question was 3 feet by 4 feet, making 1,728 square inches; they put into it 1,800 roses, or 150 dozen; 200 violets, besides 3.5 of a 24-inch wreath that contained 2,500 violets, hung on the corner, taking up considerable of the space. Now, first-class Brides and Perles will measure from 11.2 to 13.4 inches in diameter. Just imagine those 1,800 roses stuck into space less than an inch square, to say nothing of violets, violets, wreath and fern that were jumbled in one way or another. I do not contemplate for a moment while I dig up the ghost of Michael Angelo and have him hunt for the artistic among those dove-tailed roses. In my mind, it brings up an old man's face with a mouthful of store teeth or a section of a huge ear of corn, and fully as artistic.

Now, Mr. Editor, a great many people have become disgusted with funeral designs of any description, and it's just through the forcing upon them of just such pieces as I mention above, and when florists will learn that it's not the amount of flowers that is put into a piece that gives it the value, but the artistic effect produced, more people will order designs for funerals. The average florist needs more brains and less stock in all his work. In all designs: keep close to nature, avoid the mechanical part as much as possible; use as much of the kind of flowers as possible, and whatever you do, don't crowd. If a customer orders a wreath for \$10, don't figure to put in five dozen roses at \$2 per dozen, when you can get the desired effect with one-half the amount. Charge so much for stock and allow so much for brains, and if the customer kicks, rest assured it will be on account of the quality of the brains.

In conclusion, will say that if above advice is followed there will be less trouble in getting your customer to take designs for funerals. Here in San Francisco we make up more funeral designs than in any two cities in the east. Fifteen and twenty years ago we were just where the east is at present in the making of funeral pieces. While, out here, we all have Long's Floral Album to show customers the various designs, we would never think of making one like the original. On pillows, wreaths, etc., rose stems are from 6 to 10 inches in length, violets from 5 to 7 inches and all other flowers in proportion.

We have here some forty retail stores, all doing fairly well. Wholesale prices of flowers about the same as in the east, retail prices about 50 per cent less. Everybody buys flowers; the man with the tin dinner bucket buys a bunch of violets or sweet peas, according to the season, to take home to his wife or sick child, with as full appreciation as the banker who orders orchids or the finest roses for his

mansion. They all have a love for the beautiful. SHIBLEY, The Florist, San Francisco, Cal.

[After all the good advice that has appeared in the REVIEW regarding the avoidance of stiffness in the arrangement of flowers, it is rather painful to receive such a communication as above. In regard to the floral book illustrated it may be well to say that in response to inquiries we were informed that the people ordering were bound to have a book and nothing else. And the design itself did not look nearly as stiff and formal as it did in the photograph. And while the florist should endeavor to lead customers away from formal set designs, we are inclined to believe that if a customer with the cash in hand wanted a formal design made and wouldn't have anything else, we would make it up and get the money that would otherwise go to some florist who was not so particular. The REVIEW is a trade newspaper and reports things as they are. It depreciates the use of set designs, but it recognizes the fact that an immense number are made up and that they are a factor in the trade. Again, the florists who make up the loose, graceful work rarely have it photographed. It is generally the man who has built a railroad car or ship who has sufficient enterprise to have his work photographed. When we do get photographs of the others it is generally when we happen to have heard of it in advance, and get a photographer there on our own account. We trust that Mr. Shibley will be good enough to help us out in this and favor us with some photographs of floral arrangements of the style he would recommend.—Ed.]

CATALOGUES RECEIVED.

Hesser, Plattsmouth, Neb., wholesale price list of palms and other decorative plants; I. L. Pillsbury, Galesburg, Ill., retail catalogue of cut flowers, plants, fruit trees, etc.; Klehm's Nurseries, Arlington Heights, Ill., hardy plants; Geo. M. Carter, Evergreen, Ala., decorative evergreens for all social occasions.

THAT DOLLAR.

How dear to our heart is the bright silver dollar.
When some kind subscriber presents it to view;
The silver head without necktie or collar,
We long for the bush where the pretty thing grew.
The wide-spreading eagle, the arrows below it,
The stars and the words with the glory they tell,
The coin of our fathers, we're glad that we've got it,
For some time or other, 'twill come in right well;
The spread-eagle dollar, the star-spangled dollar,
The old silver dollar we all love so well.
—Credit Lost.

BEAVER, PA.—B. F. Engle has purchased the Beaver Greenhouse and stock, and after closing out the stock he will tear down the buildings and move them to Rochester, to be used in enlarging his conservatories at that place.

DUBUQUE, IA.—A. L. Glaser has purchased the greenhouse and business of Nicholas Mettel on Windsor avenue and will continue same.

CINCINNATI.

The Market.

With almost two weeks of bright and really hot weather, the thermometer at 105 degrees in the greenhouses, its no great wonder that there is a surplus of stock on the market. Especially is this so of carnations, which are being cut in enormous quantities. The prices obtained for them are correspondingly small, there being scarcely any demand. From 50c to \$1.50 per 100 is asked. Roses are rapidly growing smaller, showing all the effects of summer conditions. They are in better demand than carnations, but \$4 per 100 is about the best price obtained. Miscellaneous stock that can be used for funeral work sells fairly well. Harris is a drug on the market.

Various Items.

I am glad to report that the damage done to the florists who were flooded by the recent high stages of the Ohio river is very small. Ben Glins, in whose greenhouses the water rose almost to the top of the benches, suffered most; but he reports loss very small. Fred Walz was kept back by his carnation planting, as the field used for that purpose was flooded. K. Wolf managed to stay the rising water for a time by building a dam around his place; but this gave way and there was two feet of water in his houses. No damage.

Saturday evening the regular monthly meeting of the Cincinnati Florists' Society was held. The nominations for directors of the society were in order and the following gentlemen were named: C. J. Jones, J. Schuman, Gus Adrian, H. Schwartz, Ben. George, F. Ball, A. Sunderbruch, F. W. Braunstein, E. G. Gillett, Max Rudolph, W. K. Partridge. These gentlemen will be voted for at the next regular meeting, which is the annual one and takes place June 8. Five directors are to be elected.

There was considerable discussion as to whether the Florists' Society would put a float in the trades' parade, which will be held during the fall festival. It was finally decided that the society could not back the float, but it would give all the help possible in connection with the florists at large.

The annual picnic was disposed of upon the same lines. C. J. Jones now has the matter in charge, and he promises great things. Good luck to him.

Dick Witterstatter is receiving the congratulations of the trade upon his recent victory with "Enquirer" at the carnation exhibition of the Pan-American Exposition.

Mrs. Thomson bought out Mrs. M. Schwab and will continue the floral business on Vine street.

Dock Sunderbruch has sold out his interest in the business of A. Sunderbruch's Sons, and will take an interest in the Cincinnati Cut Flower Company.

Mr. Smith, of Smith & Fetters, Cleveland, was in the city. C. J. O.

DES MOINES, IA.—The new greenhouse plant of the Iowa Seed Company on Grand avenue consists of fifteen large houses. They are devoted wholly to the growing of plants.

REPORTS from the South indicate that the supply of Cape Jasmine buds will this year be much smaller than usual.

Roses Grown for the Trade....

We believe in shifting Young Roses often. All stock offered in 2 1/2 in. pots has been shifted from 2 in. and is equal to most stock advertised as 3 in. and when we send it out is well established.

Special in Woottons, Perles, American Beauties, La France, Belle Siebrecht, Kaiserin, Meteor, Golden Gate, Brides, Maids, etc.

We make a speciality of **GERANIUMS** in 4 in., Red, Pink, White and Salmon.
SMILAX in 2 and 2 1/2-inch. Extras.
CANNAS in 4-inch.
VINCAS, PELARGONIUMS, etc.
Write us about **BOSTON FERNS.**
COLEUS, Red, Yellow or Mixed.
Send 50c. or \$1.00 for samples of what you want.

Reed & Keller, 123 W. 25th St., New York, Manufacturers of Wire Dogans.

E. H. Hunt, 76-78 Washab Ave., Chicago.

WICHITA, KANS.

The Easter rush marked the beginning of the spring trade in Wichita. While reports of cool weather, etc., came from more northerly places, the Wichita florists were hustling to make up for lost time caused by a late spring.

Business so far is satisfactory in volume, and will slightly exceed previous years. This is caused, not so much by larger orders but more of them, which indicates a favorable condition. About the only item that shows a decrease is the sale of sweet pea seed, which is much less than last year.

Mr. Ferdinand Keuchenmeister, the "Riverside Florist," was recently appointed superintendent of the city parks. For the last two years he has been more or less connected with the work, and well knows just where to take hold. Mr. Keuchenmeister moved from his Harry street location last year to a new location near the parks, and rebuilt a much larger and more substantial establishment.

Mr. H. C. Hunt, for a while with W. H. Culp & Co., sold his interests last June to W. H. Culp, and started new on his own land near College Hill, associating with him Mr. A. R. March. They have three houses in good location in a growing part of the city, on the ear line to the cemeteries, with a good chance to dispose of their surplus to downtown florists.

The "Wichita Greenhouse Co." are closing out their business, the manager, Mr. Capps, being obliged to keep away from the greenhouses on account of rheumatism, and Mr. Conklin, the president, having other business interests which take all his time.

C. A. Rose, the veteran florist, reports good business, with nothing especially exciting.

Chas. P. Mueller and W. H. Culp & Co., who both do a good deal of their own growing, are in their usual rush, in the effort to do their own planting in seasonable time, and at the same time not neglect the demands of their customers in the same line.

The prospects for Decoration Day trade are good, with promise of plenty of outdoor material to relieve the demand for greenhouse stock.

ONLY FIVE PER CENT.

Our advs. in FLORIST'S REVIEW for the year ending May 1, 1900, cost us only 5 per cent on orders received.—THE MORRIS FLORAL CO., MORRIS, Ill.

ST. LOUIS.

Club Meeting.

They May meeting of the Florists' Club on last Thursday was not so well attended as was expected. Only eleven members were in attendance, and of the eleven, six were from out of town. This shows how little interest the city members take in the club's welfare.

The meeting was opened promptly at 3 o'clock by President Guy. The exhibition committee made a report stating that more time was needed to complete the show list. Mr. Frank M. Ellis was selected the sixth member of the committee.

The trustees were instructed to make arrangements for the annual picnic to be held in July.

J. J. Beneké was appointed by the president on transportation to Buffalo for the S. A. F. convention.

Dr. A. S. Halsted tendered the use of the Commercial Club rooms at Belleville to hold the next meeting of the club on June 13. The invitation was accepted; the members are to be at the club rooms promptly at 3 o'clock.

Three members were dropped from the rolls for nonpayment of dues.

R. J. Mohr read an essay which was very interesting to the members.

Mr. H. G. Ude, of Kirkwood, showed a few seedling carnations of the Day-break type with 52-inch stems. The committee voted them worthy of mention.

In a discussion on pink carnations Crocker, Deacon and Lord were voted the best in the market just now.

The meeting then closed to meet at Belleville, June 13, when it is hoped that the city members will come out in full force.

The Market.

The cut flower trade is exceedingly dull at present and there are plenty of flowers of all kinds in the market and with no indication of immediate improvement. The warm weather of late has had a very bad effect on stock in general and roses in particular. There has been quite a lot of funeral work of late, but the transient trade is falling off very fast. Sunday and Monday it became quite cool, which helped things somewhat. Some of the roses that came in were mildewed. Beauties are selling cheaper than ever before. There are so many carnations coming in that the market can hardly be quoted. Fancy carnations bring \$1 per 100; good carnations 50 cents, and one would hardly believe the price by the 1,000. Some of the downtown stores are selling them at 15 cents or two dozen for 25 cents and the fakirs even cheaper.

Sweet peas are still a glut at 25 cents per 100, except white, which bring 40 cents. Outdoor flowers will soon be a thing of the past and when Decoration Day comes cheaper flowers will be scarce. Good valley still brings \$3; poor valley \$1 per 100. Harrisii and callas at about your own price. Smilax sells well just now.

The exhibition committee is now composed of C. C. Sanders, F. J. Meinhardt, Emil Schray, George Windler, F. M. Ellis and R. J. Mohr. They will meet at Ellis' store, May 28, to select their chairman and finish up the show premiums and the club's preliminary list. The Shaw list must be ready soon

in order that it may be placed before the directors' meeting of the Missouri Botanical Garden for approval. They meet every second Wednesday of each month at their downtown office in the Bank of Commerce building.

Park Commissioner Ridgely has appointed Timothy O'Brien keeper of St. Louis place.

Mr. A. Jablonsky has opened a floral store on Easton avenue, near Hamilton.

Bowling.

The attendance at the bowling club is falling off each week and if this keeps up we will hardly have a team to roll at Buffalo. We could put a team together that would make any of them hustle to win, but they don't come down for practice. Chicago seems to have awakened again and is rolling from fifteen to twenty men each week, but we seem to have lost all interest, and the few who do come down are becoming disgusted at the small attendance. Last night only four came, and from the books of the scores Ed Winterman's war whoops at Chicago last week were still ringing in their ears. Just look at them!

	1	2	3	4	Total
Kuehn	179	168	173	169	729
Ellis	127	154	141	161	583
Beneké	122	156	150	141	569
Ellis	73	159	150	141	523

J. J. B.

BUFFALO.

I am inclined to think that business has been very fair of late, with a plentiful supply of flowers. Mr. Kastig remarked a few nights ago, pointing to a vase or two of carnations, "That's the first time this spring that I have had any carnations left over night." The past few days have been very cool and quite as well for the florist and plant grower that it is, for a warm spell gives folks the fever and they want to plant their gardens two weeks before the safe time.

The club had a good meeting last week and every committee reported progress, which were all received as quite satisfactory. Mr. Charles H. Keitsch has taken hold of the trade exhibit in a mastery way, as only a thorough and painstaking mind can. He has every detail looked after, and as he won't say it for himself I must, viz., that there never was a more convenient and spacious hall for the purpose and never were the arrangements more carefully and thoroughly organized. Exhibitors will find this to their great satisfaction when convention comes. W. A. Adams is also doing good work as chairman of the Hotel Committee and if our florist friends find themselves without a resting place next August it will be only because they have not sent their explicit requests to Mr. Adams. The Sporting Committee, or rather Committee on Sports, are attending to their duties, and Captain Brank, the chairman, and W. Belsey Scott speak off occasionally and have a little practice with the gun.

Visitors have been numerous. They include D. J. Thomas, editor of "Home and Flowers," Springfield, Ohio; James H. Vick, of Rochester; Mr. Crossman, the well known seedsman of Rochester; Mr. Dye and J. E. Stillaway of New Jersey; Walter Mott; Mr. J. A. Valentine of Denver, who is taking a trip from Galveston by ocean sail to New York. That's rather a roundabout way to reach the Pan-American from Denver, but it was good for his health, and he looks as rugged and calm as ever. Mr. Frank R. Pierson, of Tarrytown, has been here two days, and it took him all that time to receive the congratulations of his friends and the officials of

the exposition on the magnificent display of tulips, which has been the bright, particular star of the Pan American grounds. W. S.

PITTSBURG.

Club Meeting.

The regular monthly meeting of the Pittsburgh and Allegheny Florists' and Gardeners' Club was held last Thursday evening at the rooms of the Pittsburg Cut Flower Company, 504 Liberty street. There was a large attendance, and in addition to commercial florists, private gardeners, interested amateurs and park men, all members were out in force and took part in the discussions. Seven new names were proposed for membership.

The subject under discussion was palms. It was handled by John Bader, of Troy Hill, Allegheny, and he brought in a lot of the different kinds of palms to illustrate what he was talking about. John is the largest grower of these plants in western Pennsylvania; he grows great quantities of young stock to wholesale to other florists, and large plants for those who do a decorating business. The different species of a genus were handled in turn, first the kentias, then the latanias, then the arecas, and so on; the plants of each set to be spoken about were placed on the table before the audience and their merits and demerits thoroughly and practically exposed by all of the members. Then this lot of plants was set aside and the next genus set up for similar treatment. The meeting was lively and meretricious.

All points considered, the most favored palms were *Areca lutescens*, *Kentia Belmoreana* and *Phoenix Tropicola*; the only fault of the last named was its slowness of growth and consequent expensiveness. Doucing with cold water was given as the main cause of spotting and yellowing in several palms. *Livistona rotundifolia* had many friends, and so had *Rhapis flabelliformis* and *R. humilis* for long-time housework and shady quarters.

Mr. Randolph declared he could sell but a very limited number of *Arancaria excelsa*, because of its stiff appearance, but others found a demand for it among German and English people. All agreed, however, that as an all-around useful plant *Pandanus Veitchii* has never been surpassed "if we never will have an overstock of it, either, for you cannot raise it by the thousand from seed as you can palms."

The next meeting will be held June 13 and the subject is "Outdoor Hardy Roses." An exhibition of these flowers will also be made and the general public invited to come to see it free of all charge. P. A.

SPRINGFIELD, O.—Fire destroyed the greenhouses and barn of A. G. Wenger, near Villa, May 6th. Loss is estimated at \$2,500, partly covered by insurance.

E. OAKLAND, CAL.—Mrs. R. D. Yelland will this season build a carnation house 18x50. It will be built over the carnation beds in August or September.

RUTLAND, VT.—S. A. Baker has added a new house, which will be devoted to plants, the old one being devoted wholly to cut flowers.

LANSDALE, PA.—William Sturzbecher has purchased the greenhouses of Theo. Kneuth, of North Wales.

INDIANAPOLIS, IND.

New Items.

The State Florists' Association met on the evening of the 8th at the Commercial Club rooms with Vice-President Alley in the chair. Heretofore we have been meeting at just any place selected by the secretary, but after some discussion it was decided to meet regularly in these rooms. They are centrally located, and the light and ventilation are good, and no more pleasant meeting place could be found anywhere.

The main topic for discussion was "The Street Fakir," who has swooped down on our city in full force during the past month or so. Up to this time our city has been free from these parasites, but as one grower said, they are in all large cities, and I guess our beautiful city of 200,000 is not getting to be a big town, too. How willing we would be to remain a little smaller if it would only keep away the fakirs and a few other evils which are found only in large cities.

The warm weather which prevailed during the last part of April drove out thousands of carnations, which made it easy for the fakirs to find all the stock they wanted, and the store men are loud in denouncing the growers who have been selling to them. One grower especially has been and is still selling them all he can spare, and the store men say he will have to do the same next winter unless he ships his blooms out of town. Nearly every one present took part in the discussion, and it lasted over an hour, but no definite understanding was reached except that everybody should work together to force the fakirs out of business in this city. John Hartje especially became very eloquent at times while discussing the situation. Better slate John for a speech next February.

Mr. Hughey, of the Capitol Lumber Co., had on exhibition a plank of peck cypress which he says is used in the south in building government wharves and piers, and which he says never rots. It is the same as is used in greenhouse construction, except that it is full of small holes, made apparently by some insect, but Mr. Hughey says it does not impair its lasting qualities a bit. Several thousand feet were engaged at once for trial, and if it lasts it will become popular.

There was a nice exhibit of carnations in connection. Bertermann Bros. showed a vase of Mrs. Lawson which looked nice. E. A. Nelson showed a nice bunch of his seedling. John Hartje showed a bunch of large pink seedling and several blooms of other varieties. Baur & Smith showed a vase of first year seedlings, among which were some fine things. Two blooms of a cross between F. Hill and White Cloud looked as though they would be heard from again.

New members elected were E. Hyatt, of Anderson, and Wm. Bradley, of Elwood.

Out-of-town visitors were J. A. E. Hough, of Anderson, and W. W. Coles, of Kokomo.

The bedding season is in full swing, and everybody is busy. The demand is fine and prices are good. A. B.

Elwood, Ind.—The residence and greenhouse of B. F. Randall was destroyed by fire May 2.

NEW CARNATION

Queen Louise.

We have sold this season 75,000 double-headed long stem flowers of this great commercial White Carnation at the highest market price and have had only good reports from our customers and not one word of complaint from either commission men, florists or retail customers. You will have to grow this variety if you wish to compete with your neighbors. On our place it produces twice as many flowers as White Cloud or Flora Hill and is a better variety in every respect.

Rooted Cuttings,
\$10.00 per 100, \$75.00 per 1000.

J. L. DILLON
BLOOMSBURG, PA.

BALTIMORE.
 Seasonable weather, rather below the average in temperature, with moderate rains, which already nearly aggregate the rainfall of the entire season of last year, make the record of a week well adapted to the spring work which goes on now with vim all around. The outdoor shrubbery has had no untoward interruptions and the blooms of sorts in season has been abundant and unusually perfect. So, too, the beds of bulbs have been exceptionally showy whenever noticed.

Trade for the week ending today (May 13) has, as a rule, been as dull as was ever known at this time of the year. The quantity of flowers coming into the market is simply enormous, whilst the quality, thanks to favoring weather and the lack of the extreme heat liable to be experienced after the first week in May in this latitude, keeps up fairly. Good Beauties are still to be had in considerable quantities and carnations are also in fair condition, though some varieties are diminishing in size.

Prices diminish with the size of the flowers, as is expected. Out-door stuff, lilies, etc., restrict the call for products of the greenhouses. Bedding stuff is in demand and apparently in ample supply. The Southern Narcissus nuisance is about over, the decline in price making further shipments unprofitable. John Cook has been shipping his Emperor to New York by the thousands and getting good returns.
 R.

DENVER, COLO.
 The Denver Florist Club held their regular business meeting May 10 and had a very enjoyable time. Besides the routine business there was much discussion on various subjects that was of much interest to the members present. Five new names were added to our membership roll and we now have about fifty. The club meets the second and fourth Fridays of each month: that of the second is for business and discussion and the fourth is devoted to social features, which seems to strike the large majority and has tended to increase our membership.
 The cut flower business has fallen off. Roses and carnations are bringing any old price. Several members of the club intend to go to Buffalo to take in the exposition.
 THORNE.

OLEAN, N. Y.—W. G. ROSS is building three new greenhouses, covering a space 80x200 feet.

ROCK ISLAND, ILL.—Messrs Meyer & Behring, two young men from Muscatine, have purchased a piece of land 130x200 upon which they will erect three greenhouses, each 160 feet long.

SACRAMENTO, CAL.—The annual floral parade took place May 7 and was a great event. The queen of the carnival rode in a carriage decorated with 1800 white pampas plumes and 4,000 pink carnations.

Nephrolepis Wittboldii

AT the left is a plant of *N. Wittboldii* lifted from the bench.

After being photographed 40 runners were taken from this plant and potted up. It is even more prolific than the well-known Boston fern. It has not only greatly added beauty and grace but possesses every characteristic necessary to make it a money maker for the small as well as large grower. It produces with remarkable freedom, grows quickly into a fine specimen and as a house plant is fully as tough and lasting as *N. Bostoniensis*.

**YOU NEED IT IN
YOUR BUSINESS.**

Fronde of *N. Bostoniensis*

Fronde of *N. Wittboldii*.

REMEMBER we are not sending out weak, puny plants, but **Strong Vigorous Stock that will immediately produce runners if planted out in bench.**

We are offering fine plants, ready for 3 and 4-inch pots at **\$1.00 each, \$10.00 per doz., \$75.00 per 100.** The demand will be immense next year and you ought to have a stock ready.

LOUISVILLE, KY.

Trade has not been so good for the past week owing to the dry spell we had. But a good rain has set in and everything is looking fine. Lots of Harrisii lilies coming in and sell at \$5 per 100. Carnations around here are all planted out and the rain has given them a good start.

Jacob Schulz is cutting some very fine seedling carnations. He lately had a very large wedding decoration.

Nanz & Neuner report a good shipping trade this season.

Wm. Mann reports his trade very good; lots of funeral work.

Jos. Coenen & Co. have all they can attend to in the plant line.

Ed. Heitz has completed his new range of houses at his new place.

The Kentucky Society of Florists is thinking of going to the Pan-American Exposition at Buffalo, in a body, during the convention of the S. A. F., in August.

Mr. John Bauer, the well-known potterly man, dropped dead in his office on Wednesday morning at 7:30 o'clock of heart disease. The stricken family has the sympathy of all the florists.

HY LICHTEFELD.

UTICA, N. Y.

There was a good attendance and much enthusiasm shown at the first regular meeting of the Florists' Club held since its recent re-organization. Several were proposed for membership and it is evident at this early date that the club will enjoy a prosperous and successful existence.

The subject mainly considered was the one of holding a flower show, and while all arrangements were deferred until some future meeting it was unanimously decided that one should be held during the coming fall.

The president's table was decorated with several vases of carnations, among them some fine blooms of No. 11, C. F. Baker & Sons' seedling from Armazindy and Albertini, and a magnificent bunch of Queen Louise, J. L. Dillon's regal white, for which a vote of thanks was tendered the donor.

The next regular meeting will be held Thursday evening, June 6th. S.

AMERICAN CARNATION SOCIETY.

We have received from Secretary Herr a copy of the printed proceedings of the tenth annual meeting of the above society, held at Baltimore last February. It is very neatly printed and contains all the essays read at the meeting, together with stenographic reports of the discussions on same, and a lot of other interesting matter. It is a valuable reference book for carnation growers and should be in the hands of every one interested in this important flower. A copy may be had by anyone by joining the society. The annual membership fee is \$2.00, and applications should be addressed to Albert M. Herr, Sec'y, Lancaster, Pa.

REDLANDS, CAL.—Upon the arrival of President McKinley and party the train was pelted with roses. The city was beautifully decorated. The broad street was literally carpeted with roses, purple lupins and red poppies, and the wealth of flowers everywhere filled the air with fragrance. Oranges were profusely used in the decorations, and the marshals of the parade wore orange ribbons across their shoulders. The exercises took place on the flower-bedecked balcony of the hotel.

PETOSKEY, MICH.—The Petoskey Floral Co. will hereafter be known as the Petoskey Floral and Nursery Co., having added a full line of ornamental trees and shrubs.

EDITOR: "Here's a line in your poem about the 'flowerets shooting into the air.' Flowers do not shoot. They grow." Poet: "But, sir, they have pistils."—Melbourne Leader.

NASHVILLE, TENN.—Chas. Tritschler, gardener for the Nashville, Chattanooga and St. Louis R'y, has begun planting out at the stations on his road.

Decoration Day.

Decoration day must now be considered in many ways. 'Tis not altogether the day of sad memories which occasioned its naming. The extraordinary march of time with its ever increasing army of new people must needs change conditions. Originally a day set aside for the decorating of the graves of those who fell in defense of the republic, it has become a great and grand institution, a national day upon which the smiles of prosperity quickly dry up the tears of adversity. The young girl, in her gaudy dress on pleasure bent, may be seen going half way to the cemetery with her widowed mother, and the picture typifies the present and the country, and in this light must the florist consider it. The past made the present possible, but the present is too much inoculated with its get therewiths to stop to acknowledge the debt.

Upon the florists of this country develops the duty of preserving the original intent of Memorial Day, and in our humble opinion some organized effort should be made with that end in view. The decorating of the principal monument in each city on that day by the florists would result in a vast amount of good to the trade, for it would remind others of their duty. Here in New York the day is a general holiday, almost every line of business is shut tight. There is quite a business done in flowers to be worn on the street, and the Greeks' stands are the most patronized; the stores do very little business, especially in the afternoon, and should be closed. Almost everyone who can plans to go out of the city and many boxes of flowers are taken to friends.

The principal part of the trade, however, is in small bedding plants, and the growers attending the plant market derive nearly all the benefit of this section. Of late years some of the Sunday-schools have in an organized way bought a number of plants to decorate prominent graves. Usually the Sunday before Decoration Day the general public go out to the cemeteries to decorate family graves, consequently it may be said the greatest plant trade is done a week or more before the 30th. Almost every kind of plant and design is used. Some terrible things are seen on graves sometimes, and we often wonder if the florists' tongue or the ideas of the customer are responsible; we fear it is both in the majority of cases. This much can be said, however, to the credit of the people who have lived a few years in this country, that they prefer natural to artificial flowers for decorating purposes. Of course almost anything you have growing can be used, and it is perhaps only business to try and sell everything, but we should not forget that there are many things inappropriate.

Let's talk things over. Don't you think that you could induce some school or society to invest a small sum in connection with the greatest event in the history of their country? True, you may not make

a dollar on the transaction, but you are sure to get some good from it indirectly. Better for you to do this than to loan out plants, or give flowers for nothing to some wealthy hen party. In the case of a class, society, or school buying plants from you, you might arrange to have them planted for them; in many cases we notice plants in pots put around some monuments, only to be dried up and swept away in a day or two. Where there is no room to put plants out, better induce the party to adopt the wreath.

Again, as to the Grand Army Posts, we scarcely can hold them responsible for what we see them carrying whilst on parade on Memorial Day. We are inclined to think that each post should at least carry a well-made wreath, and that every man in the post could be induced to pay 25 or 50 cents for an individual wreath, providing it was made prettily, and in quantity, small, pretty wreaths could be made for that price. Again, let us say that for Christmas and Easter we make herculean efforts to capture trade; would it not pay to make up a set of Memorial Day wreaths? Not arti-

in praise of the manner in which New York monuments have been decorated for the past seven or eight years, and every year it grows worse. Ten or fifteen years ago there used to be considerable rivalry among the best florists as to who could do the best work on the principal monuments, but of recent years the work has been left to amateurs or worse; the consequences are that with a few exceptions the life effort of many a famous sculptor is made for the time a thing of ridicule.

The Sons of the American Revolution and the Irish Society of New York are the only two societies who show dignity and reverence in their decorations for this occasion. The former uses a 30-inch round wreath of green galax on the in and outside of the wreath, and bronze galax in the center; on the bronze leaves in yellow lettering are the words "Sons of the Revolution;" and broad ribbons of the Continental colors—buff and blue—are tied at the top of the wreath. They are always well made and are very effective. One is placed on the Nathan Hale, Washington and Montgomery monuments here. The latter society has adopted the crescent wreath of bay leaves, tied at the top with Irish and American silk flags; these are put on the graves of those who were prominent in the rebellion of 1798.

The Swedish and Norwegian singing societies of Greater New York yearly march to the Battery, at old Castle Garden, and each club puts a wreath of flowers on Ericsson's statue. Their colors, of course, form a great part in the decoration, but they put wreaths around

□ □ □ □ □ The Big Bell of Apple Blossoms and the Monogram.

A Wedding Decoration.

ficial stock, but well-made designs in natural material. We are of the opinion that if such were on exhibition in your window, and on your counter from now on, many could be sold. Some special effort should be made to have our trade more closely identified with the day. It is now to all intent and purposes a florists' day, but it is yearly becoming more imaginary and less a fact, and it is the profession's own fault.

We regret to say we cannot say much

his neck, pile his hands full, and tie more on his legs until it seems that the poor statue smiles and scowls at its plight. Of late the colored people alone take care of Lincoln's monument, with characteristic results. Regimental monuments are disfigured by cheap paper muslin flags and flaring immortal designs. Lafayette Post makes some attempt at symbolical decoration, but the head of Lafayette is made a substitute for a tent pole from which to suspend

ropes of greens. We need only, on in definitely to describe these decorations. Lincoln has often a wreath of no mortals, or green put round his neck; Washington is often made to hold a wreath, as if about to present it; Farragut is holding an anchor, as if he were going to throw it overboard; Grant carries wreaths on his shoulders; or one around his hat; and why all this? Is it not time that the florist should know what is proper; what constitute, if not the rules, at least the etiquette of art? To find shelter behind the ever-ready excuse that the people do not appreciate art, but are forever demanding caricatures of it, is cowardly.

Let us point out a few things. Six sprays of leucothoe, green or bronze preferable, tied both sides of a ten inch wire ring, a small silk flag tied in the center at the bottom, makes a pretty little wreath that will appeal to any Grand Army man, and it can be made and sold at a profit for a few cents. The same kind of design can be made of boxwood, mountain laurel, bay leaves, galax, cypreas, ivy or any substantial green with only a few cents difference in the cost. The manner of making up the wreaths should be such as to add value to the material; they should be the same on both sides, made good and substantial and tidy, and have the national flag attached. We

est of all wreaths (and weight is a very important matter where things have to be carried long distances) can be made on a frame work of fine wire netting. This is done by taking a cross-shaped wreath frame and fixing the netting in the shape the wreath is when mused; individual leaves of *Laurus nobilis* or leucothoe are then fastened on by wire hooks, twisted on the inside; the reverse side of the wreath can be greened with ferns, or *Asparagus Sprungeri*, or smilax; there is no moss or sticks used. This style of wreath could also be used for general carrying purposes.

Party emblems or designs, the most of which are at best monstrosities, are entirely out of place on Decoration Day. Often we see anchors, fire trumpets, swords, flags, post or state designs made of several colors in immortelles or cape flowers; these are carried admiringly in processions; but that does not make them appropriate nor justify their manufacture. The florist is mostly to blame for it. Harmonious effects of course are always delightful, but the use of colors in almost any form are permissible for this event, in fact the more cheerful the colors the better. You are not providing for a funeral, you are beautifying memories, consequently bouillonieres of

ors we would say red, white and blue ribbon is not expressive enough, there are too many tri-colors and combinations of colors to typify other countries; flags are the only things to use, the only things that cannot be misunderstood. IVYKA.

A WEDDING DECORATION.

We present herewith several engravings from photographs of a wedding decoration arranged by the Geo. Witthold Co., Chicago, at the Germania Club, that city, recently.

The huge bell suspended from the ceiling in the dining room was eight feet in diameter and was of apple blossoms, the blooming twigs being inserted so thickly as to make it a solid mass of bloom.

The balcony was banked with decorative plants and in the central foreground was a huge vase of American Beauties, hardly discernible in the picture. As all the photographs had to be taken by flash-light, detail is not as perfect as could be wished.

One picture shows the decorations where the ceremony was performed, and here the leading flowers were lilies and white carnations, while *Nephrrolepis Wittholdii* and asparagus were freely used as greens. Just in front and not seen in the picture was a hollow floral ball filled with loose flowers. Small white ribbons led from this to a nearby doorway and at the conclusion of the ceremony a pull at the ribbon opened the ball and the contents fell on the couple.

As will be seen in the pictures, wild smilax was freely used overhead and decorative plants occupied all available points of vantage. But the best effects in decorative plants were on the stairs and in the alcoves and turns of the hallway above, which it was unfortunately impossible to photograph for lack of light and inability to use a strong enough flash to give any detail.

The general view will give some idea of the decorations on the tables. This view was taken from the balcony. The price of the decorations was \$400.

A RETAILER'S VIEWS.

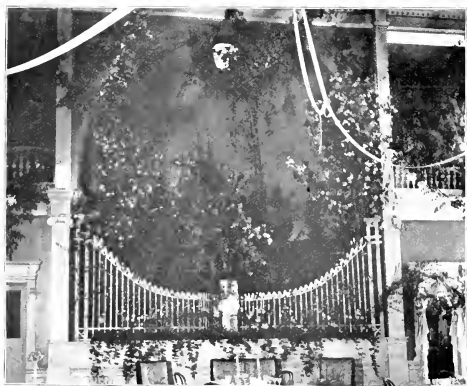

"How The Grower Should Do."

By E. A. SOEDNER.

(Read before the Detroit Florists' Club.)

Andrew Carnegie has said that the three things necessary to build up a commercial success are: First, capital; then, management; then, labor. Of course, he did not refer to the florist's business; if he had, no doubt he would have mentioned labor about a dozen times to capital and superintendence once. Of course, we know there is a great amount of work in all branches of the business, but we presume it will be admitted that the work, worry and the thousand and one annoyances that must be borne by the retailer outweigh the troubles of the grower at least a thousand to one.

The retailer is the prime mover in keeping flower lovers in buying humor, making new customers by every known means, forever catering to the whims and fancies of customers, so that no opportunity is lost to keep the growers' stock moving from the greenhouse to the user. A slave to the grower, a slave to the flower buyer, a loser from stale stock that was perhaps half asleep when the grower unloaded it, a loser from bad debts, a loser in many ways

The Balcony.

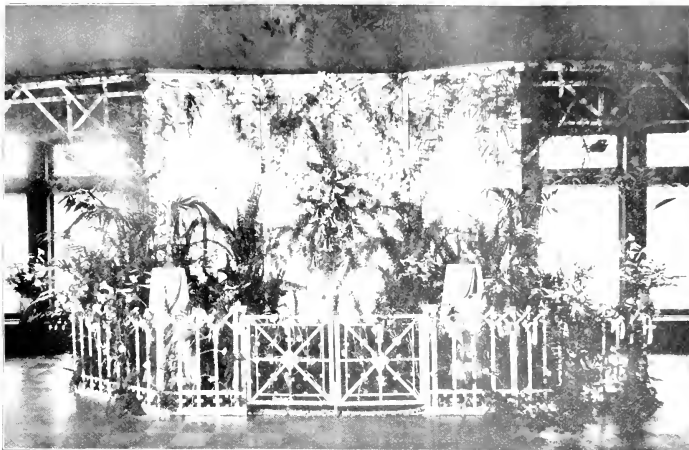

A Wedding Decoration.

are under the impression that if florists would take a sample of these to the proper authorities, almost every man parading in commemoration of the day would carry one of these wreaths to a comrade's grave.

Where a collective wreath is desired it can be made of lasting flowers such as roses, carnations, hydrangea, in fact anything that will last several hours parading, but there should be flowers, not tin-foil, on the reverse side, and the wreath should be any size from two to five feet in diameter. The only correct wreath of green to put on a soldier's grave is a crescent wreath made full and round, with bay leaves; of course there are several others, which as things go are good. A wreath of small cypreas leaves, the light-

red, white and blue (corn flowers, red rose, white carnation, or any such), loose bunches of flowers or small wreaths of flowers are distinctly good; even the wearing of an ivy leaf shows some thought of the full meaning of the day, and when you consider the vast amount of material such as *Rhododendron*, *Azalea Mollis* and all manner of outdoor flowers growing in the gardens or nurseries of the land, to no purpose beyond the commercial value of the plant, there are immense opportunities lost in not creating pleasure and thoughtfulness in the minds of school children, grown up people and the veterans, that there is something beyond cemeteries to be proud of on that day.

Whilst on the matter of national col-

Where the Ceremony Took Place
A Wedding Decoration.

that eat mightily heavily into that mere pitance denominated profit, it seems to us he should be accorded at least fair treatment by the grower.

One of the freaks of the growers, which amounts almost to vandalism, is the custom of holding up stock on the approach of a holiday. The result is you unload a lot of unsalable stock at an extortionate price that your retailer often sells at a fearful loss in two ways—first, his legitimate profit has been sacrificed; second, his customers have been so grieved by seeming extortionate prices that they vow never to buy another flower, and many of them stick to it, so the aftermath is simply a falling off in trade away below normal, with the fault settled on the retailer when it should rest on the grower. We simply state the case with the hope that a full discussion will somewhat mellow this crowning injustice to the poor retailer.

Another thing we think the fair-minded grower ought to do: When prices change either way we think it only common courtesy to notify your regular buyers of the fact; in these days of telephones it is very little trouble and ought to be a common practice. We also think the grower should be careful in grading his stock if he expects the sky-high price. He should be sure the stock is right in quality and right in count; it is not very satisfactory to the retailer to unpack a lot and find either short count or a sprinkling of off stock which must be sold at a loss if at all. Another thing: When a grower has taken an order for stock we think he should be sure to fill it on time, and if there is any chance of not being able to do so, notify the customer at once so he may square himself with his customer.

Another funny notion of the grower is to catch up a trade paper and notice the quotations on graded stock in which he may find a higher price quoted for

fancy goods than he got for the last lot sold. He is quite likely to jump his price to the highest point, although he never visits any other concern to find out whether his stock is high grade or not.

There are seasons when the grower has more stock than the retailer can handle under present methods, as the retailer cannot see his way clear to make the price low enough to absorb this surplus on account of the cost of selling and handling. We think the retailer would do well to make a price, say "40 carnations, 40 cents." If this would not get

the surplus to the consumer through proper channels let the balance go to the dump pile and hang the grower that unloaded his stock at the corner grocery. Of course, I wouldn't be too hard on him for the first offense, for I must say the growers are a pretty good lot of fellows after all.

One point we hope will be aired in our discussions to follow is the advisability of growing more hardy or herbaceous flowers and flowering plants for the summer and fall trade. We think there is a field of great promise along these lines.

MISCELLANEOUS SEASONABLE HINTS.

Decoration Day.

Decoration or Memorial Day is one of the big floral days of the year. Not anything like Easter or Christmas, yet a day of very hard work. In some communities many more and elaborate decorations are made than others. It is rather a time of cheap flowers. To the plant-man who fills vases for cemeteries it is a season of the hardest work and there is a sigh of relief when Decoration Day is over.

For a good many years when a customer said, "I would like my vase filled for Decoration Day," we were foolish enough to say, "You had better wait a few days; we often get a cold spell round about the 30th." Now that used to throw any amount of work on us for the first week of June. We were just overwhelmed, for directly June the 1st came you were asked rather snappishly, "Why is not my vase filled?" Fill all your orders at the

earliest opportunity you can. Don't delay a day. Get them out.

Vases and Boxes.

Few of you may be situated just as the writer is. At one time we used to send two or three wagons out; two loaded with plants and one with the soil. We thought, of course, that we were doing the very best thing, but we have learned better. Plants got killing dry. As part were used, the remainder shook about, lost the earth from the roots, and there was always a good percentage came home looking as if they "had been up all night" and a total loss. It is far better when within a mile or so of the cemetery to bring home the vases, at least the bowl that holds the plants. It is better in every way, for you have the whole greenhouse to choose from and there is no waste of plants, no broken pots or plants, or drying out that it will take

them weeks to recover. We do the same with veranda boxes whenever they are no larger than four men can handle, for you can almost fill a six foot box while you are looking out the plants if they had to be filled at the house.

Always cover the surface of vases and boxes with green wood moss. It is a background to the plants if there should be a large spot or two. It acts as a mulch, preventing evaporation, and the roots of plants find their way into it. Altogether it is most desirable both for appearance and benefit to the plants, so don't say you can't get it or afford it. I will remind you once more that the soil used in the cramped conditions should be very rich to support six times the plants that you would put in a flower bed of the same area.

We have never yet found a plant so suitable or satisfactory for the center of a vase as the *Dracaena imbricata*. It thrives under the hardest treatment and grows stout and symmetrical with wind and sunshine. Cammas are often used, but they grow too tall and exhaust the soil so much that other plants are starved. Of all the palms, the only one suitable for the purpose is some of the phoenix. *Latania*, *areca* and *kentia* all burn, because it is impossible to keep them wet enough. Chamerops are fine for the purpose, but their price is out of the question in a three or four dollar vase.

Many vases, particularly for the cemetery, are now filled with one variety of

get shabby, so unless the place is sheltered, persuade your customer to dispense with them. If you do use so-called vines, the hardiest only should be used. Of these the best of all are the vinca and English ivy, if bushy, and you are sure the vase will be kept well watered. There are several pretty things, among them lobelia, ivy geraniums, money vine, senecio, *lophospermum*, *glehoma* (particularly the variegated form of this weed), *nasturtium* and several others, all good for veranda boxes and vases; but if in the sun and wind and neglected as to water, they soon get shabby and are anything but an ornament.

Pot Plants.

Decoration Day with us is more of a plant time than cut flowers; that is, the majority of people will take out a plant worth 25 or 50 cents rather than a ragged bunch of flowers. Remember that many visit the grave of a departed friend on this day. They have no opportunity to go there for months and they want to place something there, to them the sacred spot. In our beautiful Forest Lawn you are not allowed to disturb the sod, but a potted plant can be placed there and will be respected as long as it doesn't look shabby. Thousands of pots of geraniums are taken out, and here is where a well-grown four-inch plant with two or three flowers sells well at 20 cents each.

Many, of course, want something

CYCLAMEN FOR SEED.

By PAUL KOPANKA.

(Read before the Chicago Florists' Club, May 17.)

In response to the request made by the club at the last meeting, I have prepared the following on Cyclamen persicum. I am going to say something about the culture of cyclamen for seed in an extensive way. My experience is that the best time to sow the seeds so as to get strong plants for producing seed is during the months of August and September.

Sowing.

Make a preparation of soil containing two parts of leafmold, one part of peat and one part of very clean sand. Mix all up well and sift through a fine sieve. Take shallow pans, clean them thoroughly and fill to the top with the above mentioned soil. Press down very lightly and evenly and sow the seeds evenly but not too thickly. Cover seeds with a very light layer of this same soil by taking the sieve and sifting soil over the seeds. Press down lightly again and water with a fine rose. Put on top of each pan a sheet of blotting paper and from now on water only on top of the blotting paper. The blotting paper on top of the seeds has the advantage of keeping the pans evenly moist; the seeds will come up more evenly and there is no danger of overwatering or getting green moss or fungus on top.

If you have first class seeds they will sprout in three to four weeks. Label each pan with the name of the variety and the date of sowing of seed and keep all pans of the same variety together so that no mistake can occur when pricking out begins. Place the pans in a well-shaded house near the glass. The temperature in August or September is hardly controllable. Give plenty of ventilation but avoid draughts and be careful not to allow the pans to get too dry. During the hot weather examine them twice a day to see whether they need water or not.

After three weeks take the blotting paper off. By this time the seeds will begin to have little bulbs and the first leaf will be formed. Be careful now and water only with a fine rose on the sprinkling can when necessary, after the little bulbs have made two leaves and the bulbs are fully out of the soil prepare shallow flats about two inches deep. Before using the flats white-wash them. Have plenty of holes in the bottom for drainage and put a very light layer of moss on the bottom. Fill the boxes with the same soil as was used in the pans, only add one part of very old rotted cow manure which looks almost like earth; press lightly down. Begin to prick out the little plants from the seed pans, planting in rows one-half inch apart and have the rows one inch apart. When all plants are pricked out place them in a house devoted only to cyclamen.

Cyclamen Houses.

The houses should be low two bench houses from two to three hundred feet long. The longer the houses are the easier it is to have good air in them and the floor in the houses should be made of brick, the supports of the benches of iron, the bottom of benches of slate. The slate benches when watered stay longer moist and cool the air, so the floor when syringed stays wet longer and

A Part of the Stairway.
A Wedding Decoration.

geraniums, and very satisfactory they are. Perhaps a white variety round the edge with a pink center is the prettiest combination, and I know of several vases that always look fine that are filled with geraniums of seven or eight varieties. You can't go wrong in a good mix-up, but don't let the pink of Frances Perkins and the scarlet of Nutt be the only two or the effect will be most depressing. A vase of *colerus* looks well if kept well pinched and cared for, and so does a whole vase of *Begonia Vernon*.

A great many orders are: "Fill my vase with a nice mixture and plenty of vines." These vines, if the situation is windy, are simply a nuisance and soon

larger. Pans eight to twelve inches in size of pansies are greatly in demand, and best of all is the six to ten-inch size of azalea pots, with three or more well-flowered geraniums. People don't expect these plants to last long, but they do want something pretty and even showy, and you should make all the preparation you can for the business.

In another week we will be in the midst of our bedding business. I can only give you this advice: Don't let two or three wet days occur without firing up a little or much damage can be done. Fire with ventilators wide open and harden off all you possibly can.

WILLIAM SCOTT.

The supper room with guests at table.
A Wedding Decoration.

also cools the air and gives the cyclamen a more favorable atmosphere. Give the cyclamen the most natural cultivation possible. The ventilation is preferred from the top to that from below. Water heating is also preferred to that by steam.

Place the flats of plants on the slate benches. If slate benches cannot be had put the flats on the coarse gravel which has been put on the other benches. Leave the plants in flats until they have touched each others' leaves and no ground can be seen. It is of greater advantage to prick out the young plants in flats first and then put into little pots because the young plants out of the flats are much stronger, have larger bulbs and more and stronger roots. When planted in 2½-inch pots they will more quickly take hold of the soil and form a stronger bulb.

By this time the young plants will have reached the month of October or November. If the temperature goes below 50 degrees in October firing should begin to keep the temperature at 50 degrees at night because August and September being very warm it is very easy to check the young plants by low temperature and then all kinds of diseases will take hold of them as the young plants are very tender. Keep this temperature during November and December. On bright sunny days syringe the plants lightly over the foliage, keep walks well damped and give plenty of ventilation but avoid any direct draughts.

About the beginning of January begin to pot the little plants into 2½-inch pots with the same preparation of soil as that

used in the flats, only leaving out the peat and adding one part of well rotted sods and sifting through a coarser sieve. Place on the slate benches, pot against pot, raise the temperature to 55 degrees and water only with the watering can. Shift the plants from 2½-inch to 3-inch when well rooted through.

It will now be about the month of March. Prepare the hotbeds for the cyclamen out of doors. Make a good layer of horse manure, let the manure get good and hot, take all the sash off, permit all ammonia to escape, put on a layer of very loose soil about six inches thick and put close to the glass. Plunge the 3-inch potted cyclamen in rows, the space between pots being from two to three inches. Put the sash on and shade the glass by whitewashing. Now very close attention to the hot-beds is required. When the sun is out give plenty of air by alternating the sash, one on top, next below. During dark and damp weather give a small crack of air. By this treatment the young plants will make a vigorous and compact growth, with large leaves on short stalks. If at night heavy frost should appear, cover all sash with boards; if the weather should be unsuitable in March prepare everything a month later.

When the plants are well rooted in the 3-inch pots repot into 4-inch pots with same preparation of soil as the 3-inch had, only adding a very little bone meal and coarse sand instead of fine sand. Plunge again into hotbeds without bottom heat, again near the glass. Now the plants will have reached May or June. Elevate the sash about two feet above the plants. Make a shade

above the elevated sash by drawing a white cloth from one end of the frame to the other. From now on you may be liberal in watering and if carefully done use the half-inch hose. Syringe two to three times a day, both plants and surroundings. When again the 4-inch are thoroughly rooted through shift them into 5-inch pots with a preparation of soil, half leafmold, half old soils, one part old rotted cow manure, some coarse gravel and a little bonemeal. This to be all chopped up and well mixed. But it is not necessary to shift any more. Plunge again in hot-beds as described above but leave the sash off entirely and shade only with white cloth from 9 o'clock in the morning to 4 o'clock in the afternoon. If heavy rain is in sight put the sash on.

The last shift, into 6-inch pots, will be in October or November. Before shifting select all the strongest and best plants from each variety you are going to raise seeds from. If the 5-inch are well rooted through, I mean if there is no more nourishment left, shift them into 6-inch pots so that half of the bulb is above and the other half below the ground. All the shifting should be done in this way.

Be careful to insure good drainage by putting broken crocks at the bottom of pots with still the same soil as 5-inch, but adding a larger portion of well-rotted cow manure. The nights are now starting to get cold and plants are already well hardened off; it is not advisable to leave them out in frames any longer. Before placing them in houses have the houses thoroughly clean. This being done, begin to place the 6-inch pots

on benches, 24 inch apart, and plenty of soil, so when the leaves appear the seed pods and begin to hang from the soil and lay on each other and commence to rot, and that the sun will not strike all the pods to ripen the seeds. When the plants come in full flower and the 6-inch pots are again well rooted through give them once each week a feeding of dissolved guano or liquid manure; this feeding will help them to develop larger flowers and also larger seeds.

The temperature at night will now be 10 degrees to 45 degrees, in daytime during dark, cold weather 50 degrees, with the admission of very little air, and in bright, sunny weather syringe the walks and foliage, but be careful not to syringe the flowers. The watering of the 6-inch pots should be done with the greatest care, only a watering can to be used, and do not use cold water. Have a barrel or two at the end of each house and fill at night with water to use for watering the following day, so that the water gets the house temperature. Well-grown cyclamen plants ought to have, when in 5 or 6-inch pots, 100 to 200 flowers per pot. Never syringe cyclamen when in full flower.

If fumigating is necessary fumigate before the cyclamen are in full bloom. It is advisable when the weather is warmer to partition off each variety by drawing white cloth through the space left between each variety, so that no insects or bees get the pollen of one variety on to that of the other, and it is a good thing to have white cloth or mosquito bars over the ventilators for the same reason. In this manner you can surely keep each variety true.

When all the stalks and seed pods are hanging down help them to get the right place around the pots, and if necessary elevate the pots by putting them on top of 5-inch pots turned upside down. It will perhaps be necessary to change temperature a few degrees higher or lower, which has to be judged by the growth of the plants.

In April or May the seeds will be getting, or already are, ripe, which depends upon the weather and sun. Watch carefully to see if a pod here and there is bursting; if this appears the harvest begins. Cut all the stalks off, near the bulb, spread a cloth on a table in a dry place where the sun strikes it, and the pods will all spring open and the seeds will lay on the cloth. There may be a number which will not open by themselves, so help them a little by rubbing between your hands. Separate the seeds from the stalks and empty pods. In separating the seeds the largest ones will be first-class, the next second-class, and the smallest the third-class. I prefer to always buy the first-class seeds, because they give the best plants.

By growing cyclamen in an extensive way I mean from two to five thousand 6-inch pots of each variety. It has slipped my memory how many plants are needed to produce a pound of cyclamen seeds, but it is still a well-paying business.

I will speak some time later of the sowing of cyclamen in February instead of August or September, and of propagating cyclamen only from eyes.

SOCIETY OF AMERICAN FLORISTS.

The meeting of incorporators of the Society of American Florists and Ornamental Horticulturists under the new charter granted by Congress was held in Washington, May 14. President O'Mara presided, and after much deliberation a

constitution and by-laws were adopted to meet the changed conditions.

There is but little change from the old set of laws, except in the method of nominating and electing officers and an article on "Co-operative Societies," which affects somewhat the membership of the Executive Committee. Under the new law nominations shall be made orally at the morning session of the second day and the election shall be by official ballots prepared according to the Australian form, containing the names of all candidates nominated for the various offices. The article on co-operative societies follows:

Any national or state organization making application thereof whose aims and purposes are in harmony with the charter of the Society of American Florists and Ornamental Horticulturists may be enrolled as a co-operative society by an affirmative vote of this society.

Delegates.—Each duly enrolled co-operative society having a membership of 50 or more, or of less than 50 if the membership is within the line of the S. A. F. O. H. shall be entitled to elect one delegate annually who shall serve for one year as a member of the Executive Board with all the rights, powers and privileges appertaining thereto.

Registration.—All registration of new plants by members of co-operative societies shall be effected through and by the office of the Secretary of the S. A. F. O. H. under the rules of said society. In case of dispute as to a name, it shall be referred to its special arbitration committee, subject to the final approval of the Society of American Florists and Ornamental Horticulturists; and all legislative, administrative, and biological matters, shall be referred to the regularly constituted committees and authorities of said society, any expense appertaining thereto to be paid by the S. A. F. O. H., subject to the approval of the Executive Board. The secretary of this society shall incorporate in his annual printed report of the proceedings of this society, such reports of said co-operative societies as may be furnished to him by the secretaries of said co-operative societies.

Support of Special Exhibitions.—The S. A. F. O. H. may act as the sponsor of any co-operative society holding a public floral or horticultural exhibition, in any part of the United States, the sum as may be voted by the Executive Board; said sum to be used in support of said exhibition; and may at the order of the Executive Board, award special medals or certificates as awards for new plants or flowers of American origin or other products of American skill to be used to be of special value to horticulture.

Rights Reserved to Co-Operative Societies.—The foregoing donations and privileges shall not be held as in any way impairing the autonomy of regularly organized societies that may desire to exercise their own provisions, restricting their rights to self-government, otherwise than as specified herein.

The officers elected at the New York convention were re-elected under the new constitution and the members of the Executive Committee were reappointed to serve until their successors are appointed.

Those present at the meeting were: President, P. O'Mara, Secretary, W. J. Stewart, Treasurer, H. B. Beatty, and Messrs. C. W. Ward, Lawrence Cotter, W. F. Gude, J. N. May, Robert Craig, Edwin Lonsdale, E. Buettner, James Dean, P. Welch, J. G. Esler, Wm. R. Smith, Benj. Durfee, W. G. Bortemann, Leonard Barron, Fred Mathison, A. Gude, P. Ganges, Alex Wallace, Wm. Fraser.

In the evening the visitors were entertained by a banquet at the Ebbitt House, tendered by Messrs. Benj. Durfee, W. R. Smith, W. F. Gude and J. H. Small, Jr. W. R. Smith acted as toastmaster, and Hon. Amos Cummings, who was instrumental in getting the charter through Congress, was one of the guests. The speeches were all of a congratulatory order and Mr. W. R. Smith received many expressions of thanks for his earnest, continued effort in the matter of securing the charter.

The book that saves money for you like the Florists' Manual, by Wm. Scott, is the book for you to have handy.

PAN-AMERICAN EXPOSITION.

The Tulip Beds.

The illustrations are from photographs taken on the 9th of May. The beds were then at their best and all are the exhibit of F. R. Pierson, of Tarrytown. He used 42,000 tulips in six beds. The largest contained 13,000 bulbs, the next 10,000 and the remainder were in the other four. In the whole 42,000 there was scarcely a bulb but what was true to name and they must have been of the highest quality, for the flowers were uniformly fine. They were a revelation to all who saw them, and, as a man expressed it, "It was the greatest display of tulips ever seen outside of Holland."

One view shows in the background the Horticulture building on the left, the connecting conservatory, and on the right the Mines building. The Tower is seen over the top of the conservatory in the distance, 405 feet from the ground.

The view showing the standard and pyramid sweet bays was near the Women's building. This modest building was the only building on the grounds; formerly the Country Club. The four towers in the distance had at the time the photograph was taken the scaffolding still around them. They are surmounted by some grand statuary. Beneath them is a marvelous grotto 400 feet in length.

The other picture is the one containing the 13,000 bulbs. It may be of interest to those who plant bulbs in the fall to know that these were planted about the 1st of last December. The ground was then very wet. A blunt stick was used and the bulb was put down about five inches. I mention this because we saw other people preparing beds at great expense; excavating the soil, putting an inch of sand, placing the bulb, and then covering with four inches of earth. Of course, the great majority of gardeners know that that is very old-fashioned and entirely an old fogy notion. Late planted bulbs are more satisfactory than earlier ones. I believe the later you plant before frost sets in the better.

The varieties sent by Mr. Pierson were Wapin van Leyden, white striped; Colleur Ponceau, cherry and white; Rachel Rush, a pink; Alba Regalis, a fine stout white; Cottage Maid, perhaps the best of all the pinks; the well-known Kaiserskron; La Immacule, a fine white, but drops its petals too early; Artus, the brilliant little scarlet; Brutus, a beautiful crimson; Chrysolara, perhaps the best of all yellows; Duchess de Parma, orange and red; Crimson King, a large crimson; Standard Royal Silver, a beautiful striped; and Yellow Prince. Altogether these beds have made a most magnificent display.

I may add, while describing this section of the grounds, that since the photographs were taken many choice evergreens, *Dracena Indivisa*, *Catalpa Bungei*, Russian Mulberry, and other trees, have been planted on the margins of the roads. Altogether it is a grand and attractive spot.

Dedication Day.

Dedication day was a grand day in the history of Buffalo. The excitement, the mob, the parade and other features made you think it was a magnified Fourth of July and it would be all over in the morning, but there is five months more of it and we hope we will be able to endure it. The papers say over 100,000

Tulip Bed at the Pan-American Exposition, with Horticultural Building in Background.

people entered the gate. I should have thought there were many more. The daily press will give you an account of the many celebrities who were here, from the vice president of the United States upwards and downwards. Multi-millionaires and fierce looking seniors from South America, poor but proud. The parade was a gorgeous affair. The clearing up and finishing touches went on at a great rate and the whole place was in fine order.

I am glad to say that the fine portion of the grounds given up to outside horticultural exhibits, the most beautiful spot on the grounds, is in perfect order and was greatly admired by many thousands. The tulips still made the grounds gay. Since my last notes there has been added to the exhibit twenty-five specimen evergreens by Thos. Meehan & Sons, of Germantown, Pa., which fit in finely. Bobbink & Atkins occupy a large space with many choice specimens. It is a grand exhibit. F. B. Pierson has sent another cartload of sweet bays, evergreens, rhododendrons, palms and other fine plants. Mr. Pierson has most generously loaned the New York state building a number of fine plants to decorate this marble palace for the season.

Mr. J. D. Fi-ele paid us a visit on Sunday to look over the many exhibits of the big firm of Henry A. Dreer. They made a fine exhibit of palms and ferns in the center of the horticulture building. It is a fine position and when complete will add much to the finish of this fine building. The Dreer booth in the north conservatory is a very ornamental affair and makes a fine appearance as well as being a good exposition of their varied line.

The Rose Show.

The rose exhibition was a great attraction and almost all arrived in the best order. The awards will not be published for a few days. There were no poor flowers and many were of great excellence. The Queen of Edgely were the best samples the writer has yet seen. Flowers up to date have been received from John H. Dunlop, Toronto; the H. Dale Estate, Brampton, Ont.; C. T. Guenther, Hamburg, N. Y.; S. J. Reuter, Westley, R. I.; Benjamin Dorrance, Dorrance, Pa.; W. J. Lawrence, Minton, D. C.; Peter Crowe, Utica, N. Y.; George E. Faneourt, Wilkes-Barre, Pa.; Lake View Rose Gardens, Jamesburg, N. Y.; W. J. Palmer & Son, Buffalo; S. A. Anderson, Buffalo; Floral Exchange, Philadelphia; Florham Farms, Madison, N. J., a notable exhibit from the latter establishment being 100 blooms of a magnificent yellow carnation, a perfect flower with a great stem, named Miss Ambrey Campbell.

Mr. Ulrich is hard at work getting out the bedding plants in the many courts. There are some beautiful displays of pansies in the Grand Court. When the vases are filled and the many spots destined for flowers are filled up it must be a most beautiful picture.

The Paony Show.

The dates set for the show of peonies, May 28 to June 7, would in ordinary seasons have suited the majority of growers throughout the country, but on account of the very late season these dates will find few peonies open. Without changing the dates we will be very glad whenever a grower has flowers that he

wishes to exhibit to receive them at any time, and they will be judged as soon as received.

WILLIAM SCOTT.

Exhibition of Peonies.

The special exhibition of peonies at the Exposition takes place May 28th to June 7th. Following are the classes:

- Class 1—General collection of officinally type.
- Class 2—General collection of trees or Mountain varieties.
- Chinese or hybridous section.
- Class 3—Vase twenty-five blooms pure white.
- Class 4—Vase twenty-five blooms white, shaded pink.
- Class 5—Vase twenty-five blooms light pink.
- Class 6—Vase twenty-five blooms dark pink.
- Class 7—Vase twenty-five blooms crimson.
- Class 8—General collection of Chinese, not less than five blooms of one variety.
- Class 9—General collection of Chinese single variety, not less than five blooms of one variety.

Entries must be received by superintendent not later than May 25.

Exhibits must be in place not later than noon of the opening day.

Any exhibit in one class will not be considered as competing for award in other classes.

Entries should be addressed to Wm. Scott, Horticulture Building, Pan-American Exposition, Buffalo, N. Y.

Other special exhibitions to take place during the summer are as follows: Hardy Roses, June 18 to 28; Sweet Peas, July 23 to Aug. 2; Gladioli, Aug. 6 to 17; Asters, Aug. 27 to Sept. 7; Dahlias, Sept. 17 to 27; Chrysanthemums, Oct. 22 to 31.

WASHINGTON, PA.—Richard Forrest is building two new houses. One 20x80 feet is for carnations, and one 30x60 feet is for Meteor roses.

MIDDENHALL, PA.—J. Frederick Meord is building an addition to his greenhouses and a two-story frame office.

INCREASE your foreman's ability by giving him a copy of our Florists' Manual—prepaid for \$5.00.

NEW YORK.

Club Meeting.

The regular monthly meeting of the Florists' Club was very well attended, and many faces were there that are too seldom seen. President Sheridan occupied the chair. The ways and means committee, in reporting progress, stated that they had received two prizes of \$50 each from Samuel Thorne and Lawrence Haffner for the October show. The exhibition, through J. W. Withers, reported that prospects were very bright for the grand show in Madison Square Garden. Scheehles had been sent out and any one requiring a copy could have same by notifying him at 136 Liberty street. On motion of Mr. O'Mara, a copy of the schedule will be sent to the officers of every horticultural and floricultural society in America. Mr. Langjahr, of the summer outing committee, stated that Loest Point was being considered as a suitable place to take the crowd the second week in July. The committee was empowered to make arrangements. Mr. May, as delegate to the meeting of the Chrysanthemum Society, informed the club that he had been given nothing but encouragement for the New York show.

A committee on transportation to Buffalo was then appointed. This consists of Messrs. Langjahr, Withers, Burnham, Herrington, and Butterfield. On a call being made as to who present intended going, almost the entire assemblage arose. There will undoubtedly be a very large crowd go from here to see the Midway near the Falls. Messrs. Cotter, Welch and Mathison, of Boston, on their way to attend the corporate meeting of the S. A. F. at Washington, were very welcome visitors at the club's meeting, and being asked to give his opinion of New York, Mr. Cotter said the magnitude of the city left him nothing to say. Messrs. Welch and Mathison, speaking for Boston, paid high tribute to the achievements of the New York Florists' Club and the metropolis of the country; they said it was the city which commanded the eyes of the world, and floriculturally speaking the eyes of the country were turned to the city of New York.

Mr. James Dean, on being asked to say a few words, said the last three or four years were the hardest he ever experienced, for without his range of glass and stack of plants to care for, he was like a fish out of water. He spoke feelingly of his old place at Bay Ridge, of the drawbacks of the business, of its lights and shadows; he hoped for the day when his son would be able to manage a place when he would once again be among his pet plants (and those present hoped that, too). He said they were going to Washington to do something to elevate the profession, and asked those around him for ideas that would help them. Mr. O'Mara said that there was no calculating the vast amount of good that would result from the future working of the national society; it was, he felt, destined to benefit not only the trade, but the private gardeners and all connected with the growing of plant or flower.

Mr. Henshaw, having just returned from a trip to the West Indies, gave some interesting stories of life there. The market of Guadalupe was the poorest he ever saw, \$10 would buy the entire stock of fruits and vegetables for

sale there; Barbados was a better town; Demarara was of much interest to plant-men. At the Botanical Gardens there he saw the finest lot of palms he ever saw, whilst all kinds of magnificent water plants grew in the canals, which ran through each street. At Corona Falls he saw 21 varieties of begonias growing on one rock, and on the Blue Mountain at Jamaica he found several almost extinct plants, among which was an immense patch of *Fuchsia gracilis*. He recommended the West Indies to any one wishing a winter trip.

Messrs. Stewart, Butterfield, Plumb and Chicas entertained the meeting with songs and stories, and the house committee worked hard to quench the fires of thirst. J. H. Troy had on exhibition several varieties of *Hedera arborea*, and a vase of *Yucca behobifolia*, for which the awards committee gave him honorable mention.

The condition of business could be much worse, in fact it is expected to be so when outdoor flowers come in.

An Exhibition.

A two days' flower and plant show was given by the Horticultural Society of New York, and the New York Botanical Society in the Museum of the Gardens at Bronx Park, May 8 and 9. Some very interesting exhibits were arranged. Competition was not very keen, but the basement floor of the large hall was well filled. Several good prizes were offered, and Siebrecht & Son, of New Rochelle, captured most of them. They won first in collection of ferns, group of crotons, group of palms, foliage and flowering plants, collections of shrubs, nepenthes, bromeliads, and second for six orchids in bloom.

P. Overkerk, of Jersey City, showed a group of very choice and well-grown conifers; J. H. Troy also put up a very large and interesting display of shrub and a batch of *Azalea Firefly*; E. D. Thompson, of Prospect Park, sent a group of choice palms, and won first with his collection of daffodils. In the competition for a \$50 prize for greatest novelty there were three aspirants, H. A. Freer, of Hightown and Buffalo, showed a fine specimen of their grand novelty *Pandanus Sanderi*; J. H. Troy a collection of *Hedera arborea* or tree ivy, and Arthur Herrington a plant and vase of flowers of the Barbarton daisy, *Gerbera Jamesoni*. Mr. Herrington captured the prize with his exhibit; this flower has splendid qualities and should be better known here; it is fine for decorative work; the color is very attractive.

C. Weinberg, Woodside, L. I. won first with a remarkable collection of cacti, he having some 325 varieties on the table. The Botanical Gardens won first in collection of flowering shrubs and second in daffodils. J. Roehrs, Carlton Hill, N. J., was awarded first for six orchids in flower; they were fine. The Agassiz Association of Boston, showed up a most pleasing and instructive exhibit of wild flowers. This association consists of four young children; their exhibit was one of the best in the hall and well deserved the first prize it was awarded. Special awards were given to a group of *Calceolarias* by Alex McKenzie, of Colarhurst, and H. T. Clinkaberry, of Trenton, for collection of cypripediums.

On the afternoon of the first day C. Van Brunt gave an illustrated lecture on cultivated plants. The annual meeting of the Horticultural Society was held

the same afternoon and the old officers were re-elected.

A rose and strawberry show will be given the 12th of June in the same place and it is expected that if the American Rose Society does not hold their show in Newport they may give it at Bronx Park. For a first attempt this show was a success and the management hopes to make future semi-annual exhibitions worthy of the city. Admission was free and quite a crowd attended. The Botanical Gardens are well worth a visit. J. I. D.

PHILADELPHIA.

The Market.

The cut flower market is in poor shape; one must do a good business now to earn a small amount of money. Decoration Day comes next week; from that time until the commencement and weddings are over, business in this line is apt to be much better than at present.

It does not always denote poverty of resources when the weather is spoken of or written about; sometimes the weather deserves attention. This is the case at present. Several nights this week the mercury has hovered around 50 degrees Fahrenheit at 3 a. m. (Not a night-hawk; only an unfortunate heating experiment!) This unusual chilliness has kept back the planting out season. The orders are in, however, and stock is being rapidly sold. A very encouraging demand is noticed for the choicer sorts of plants. Crotons for June delivery are popular; *Pandanus Veitchii* for vases and porch decorations are going well. For the same purpose *Hydrangea Otaka* not too far advanced, is wanted, and so on with a number of other showy foliage and flowering plants of choice sort—nicely grown.

There is rather a paucity of decorative material to draw upon at present; a few *Hydrangea Otaka* in sixes at \$3 to \$4 a dozen are useful. Then the popular taste for natural effects is causing a growing demand for dogwood branches, apple blossom, and other seasonable material that can be effectively used in decorating. Lilacs are everywhere and rather shunned by the regular dealers in consequence. Sweet peas are the subject of conversation when the growers meet. Just how high the vines and how forward the buds is of deep interest. A fine crop of these popular flowers seems assured for next month.

Various Items.

One of our hustling retailers went to church on Sunday, not Easter Sunday, and heard the sixth chapter of St. Matthew which gives a part of the sermon on the mount. "Take therefore no thought for the morrow for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof." He said it was one of the best things ever written for those who worry needlessly.

Griffin Bros., of Frankford, have a fine lot of well grown bedding stock; they have done verbasus nicely.

The Moorestown Floral Co., Edward M. Harris, manager, report a good season. They grow a miscellaneous collection of plants including a number of carnations in pots.

William J. Young, Jr., School and Pulaski streets, Germantown, has a neatly kept place that is an object les-

son to his customers. Mrs. Frances Jost has done well here and will be more largely grown next season. There is a fine lot of bedding plants on hand.

Alopecurines are becoming scarce. Godfrey Ashmann had 10,000; they are all gone. The size was largely Finch, the price 88 per 100; there were a few carried over plants at 825 per 100.

Harry Weiss, of Hatboro, has had a good season with Brides and Maids. He will grow besides these roses, a few carnations next season.

Charles W. Cox, Second and Bristol streets, has found a good demand for Kaiserins in 3 inch this spring.

Ladies' Night at the club last week was well attended.

John Westcott and friends are active at Waretown these days.

The Pennsylvania Horticultural Society meeting was held on Tuesday. There were essays by last month's successful exhibitors and an exhibition of geraniums, carniflowers, etc.

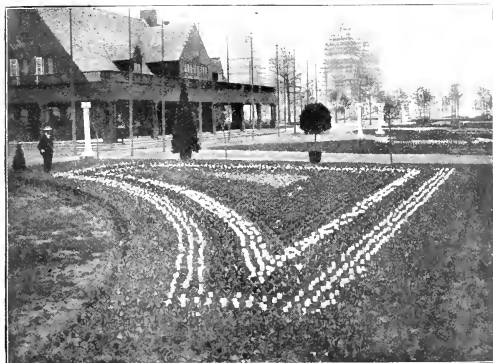

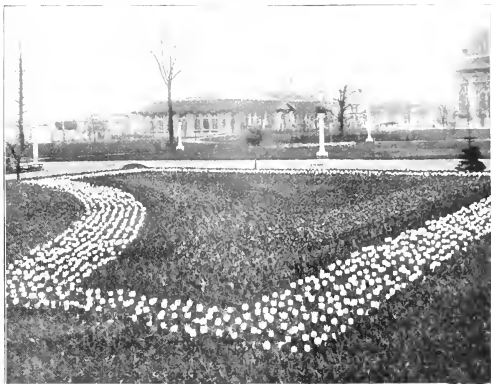

The really successful retailer in our large cities must combine integrity, industry and ability, both artistic and business. He must also have a thorough knowledge of men and be quick in using it. The following story of an attractive young man who conducts one of our stores will illustrate this point. A quiet looking man dropped in and explained to this retailer that a friend of his daughter's was going to have a tea and that he wanted to send her a few flowers. "I suppose," he added, "she will be getting some of those things," pointing to a vase of chrysanthemums on the

When the quiet man entered the room at a certain tea the young lady, who, receiving instantly left her mother's side, and came tripping over to meet him with, "Oh, Mr. X, I want to thank you so much for that exquisite shower bouquet you have sent me." It was no place of honor by itself, while all the

BOSTON.

Trade Conditions.

There is not a plentiful supply of bedding plants in the whole thing! There has been a good sized supply of everything seasonable and a fairly well-developed demand for it, but not enough to keep a

Tulip Beds at the Pan-American Exposition.

counter; "how would they do?" "Yes, she will receive lots of chrysanthemums," was the instant reply. "But they are not for you to send. Let me make you up a shower bouquet of orchids. I will give it my personal attention, and I assure you the young lady will have nothing like it." The quiet man was startled. He knew orchids came high; still was he not successful in business and the subtle flattery conveyed in the words "not for you to send" was soothing. The order for the shower bouquet of orchids was given.

other flowers were banded together on the other side of the room.

An eminent legal authority states that a writer cannot secure a patent to the exclusive right to the use of the name of a city for his nom de plume. The S. A. F. O. H.'s nomenclature committee will not, therefore, be obliged to decide whether the writers of this column have trespassed in signing themselves

PULL.

THE BEST, and the cheapest—the REVIEW'S classified ads.

large amount off the street and prices have been small all along the line.

Would anything definite on that point be of any value to you? Well, American Beauty roses have been selling at all the way from 50 cents to 84 per dozen, Liberties 50 cents to 83, Meteors and Brunners 25 cents to 81, and there has been a large surplus of all kinds of red roses which went upon the street at 1 to 6 cents, most of them having poor blossoms.

The Jacqueminot rose has not cut its usual figure with us this spring and is not now in evidence. Pink and white roses have been running at from 25 cents to 82.5 per dozen with quite a heavy street surplus. Pinks 50 cents to 81.50 per 100, with a light surplus during the week (May 13 to 19). Violets are very few as are also the people looking for them, at from 25 cents to 75 cents per. Tulips and a few Jenuills covers about the whole field of bulb material. These are not plenty, the price is small, but the demand is still smaller. The supply of spirea, candytuft, mignonette, etc., is not too heavy to clean up in the markets at just a fair price.

Sweet peas? They began coming in very irregularly a long time ago and have been very gradually increasing ever since till a very few days ago when they suddenly became quite plentiful. The price has now been forced down to 50 and 75 cents. Their quality has been extra good so far, handles a foot long and as big as a slate pencil being grown upon some of them. Pansies, too. Now down to 25. Green material now plentiful enough at pretty good figures.

Various Items.

The schoolmaster who taught me to write (or rather who dismally failed

to do so, must be looked up and fished heavily. He makes my trip about Geo. and Arthur Delaney in last week's issue read ineffectively, as well as being responsible for a few other similar errors during the past score of months or so.

Hert Leavitt, Welch Brothers' right hand man, is in bad condition physically as the result of a fall at his home. He has been away from the store for two or three weeks and there is no immediate hope for his return.

I omitted to speak of M. B. Bunke's new store last week. The building occupied by him on Beacon street is soon to be torn down so he has removed to a fine location on City Hall avenue where his contented manner and knowledge of business can hardly fail to draw a good degree of patronage from the constantly passing crowds.

Monday morning, May 20, just in time for me to make a note of it before mailing, came the news of the death of Bert Leavitt, spoken of above. Blood poison set in as the result of a broken arm at the time of the fall and produced this result at the city hospital, where he was taken some two weeks since.

J. S. MANIER.

CHICAGO.

The Stock.

The supply of all stock is still large, but prices are a trifle firmer in tone on the best grades, though weaker on the poor qualities, which last form an enlarging proportion of the stock received. For several days the weather has been dark, gloomy and rainy as well as cool, and this naturally has not benefited the plants. For the best Brides and Maids \$5 is about the top price, though we hear of a few specials bringing \$6. The best Gates go as high as \$8 and Liberties up to \$10. But the great bulk of fair quality teas go at \$3 to \$4 and the great quantities of culls sell at as low as 50 cents to \$1. The best Beauties still hold up to \$3 a dozen, but there are very few of them and the poorest are sold at as low as \$2 a hundred, with all sorts of prices in between.

In carnations a few extra fancy bring \$3, but very fine flowers can be had at \$1.50 to \$2, with good ones at \$1 to \$1.25, and odds and ends in big lots are cleaned up at 40 to 75 cents.

Paeonies are moving very well at \$5 for good stock, but the poor don't go at all. Parrot tulips sell fairly well at \$4, but the other sorts are apparently not wanted. Iris can't be given away. We are in the middle of the blue season and it goes very well at moderate prices.

The demand concentrates more and more on the best grades of everything, and the difference in prices of the best and the poorest is becoming wider all the time. It is rare that there is a surplus of really extra grade stock, but a surplus of poor quality stuff seems to now be always with us.

Local demand is very light and were it not for the shipping trade the market would be very badly demoralized indeed.

The Lily situation has materially improved and good blooms are now quoted at \$8 to \$10. The latter price will prevail for Decoration Day.

The supply for Decoration Day promises to be sufficient to meet the usual demand, but quality will probably not be up to the usual standard unless weather conditions change very quickly.

Club Meeting.

At the meeting of the Florists' Club last Friday evening Mr. Paul Kopanka's paper on growing the cyclamen for seed, which appears elsewhere in this issue, was read and discussed. The general feeling among the growers seemed to be that the cyclamen was not a profitable plant to grow for this market, as buyers would not pay an adequate price for finely grown plants. Mr. August Jurgens, who formerly grew quite a number, has practically abandoned their culture for that reason. The paper, however, was found very interesting and the thanks of the club were voted Mr. Kopanka for his essay. Little else but routine business was transacted.

At the bowling session after the meeting Mr. John Reardon developed unexpected power and passed up to the 150 class, making one score of 163. Ed Winterston's best was 184. But the main interest now centers in the league games on Tuesday nights.

Various Items.

Kennicut Bros. Co. are receiving some very fine longiflorum lilies from Klehm's Nurseries and will have a big lot of them for Decoration Day.

McKellar and Winterston have just received a lot of new baskets from Germany and have materially strengthened their line of supplies for Commencement and Decoration Day demands.

E. H. Hunt is receiving some extra grade lily of the valley and will have some heavy consignments of it for Decoration Day. This place is being fitted throughout with new electric lights.

Pochmann Bros. Co. are now established in their enlarged quarters in the basement of what should really be known as the Cut Flower building, as it now contains no less than eleven wholesale florists.

Recently reported reductions in the price of glass must have been based upon erroneous conclusions. Glass of the 16x 24 double grade is still quoted in the neighborhood of \$7.00 a box. The lowest quotation one large buyer of glass could get on Tuesday was \$6.48 a box in large lots.

Walter Kreitling & Co. put up a very pretty decoration at the Chicago Club last Saturday when Mr. James Deering entertained the French Ambassador, M. Cambon, at dinner. There were 36 covers and the table was set in the form of a square. The inner edges of the tables were studded with red and white electric lights and from these edges there sloped to the center a supporting frame work covered with hardy fern fronds, and in the center was a huge circle of yellow variegated parrot tulips which surrounded a fountain containing gold fish. At each corner of the inner square was laid a flag of red and white carnations and blue corn flowers, two American and two French. Between these were placed loose bunches of red paeonies. On the tables was a tracery of Sprengerii and apple blossoms. Over the table was a huge canopy of lilac, white and purple mixed. The effect was excellent. The price of the decoration was \$200.

F. Blonfeld has succeeded to the business of F. Grosse & Co., at Oak Park.

The Geo. Withold Co. recently received a large importation of kentias and araucarias of large sizes and they arrived in excellent condition.

C. C. Pollworth, Milwaukee, was a visitor last Monday.

The failure of August Dressel seems to have been complete and Mr. Dressel has the sympathy of many friends in the trade. At the auction sale of the stock held last week very moderate prices were realized and it is feared there will be little for unsecured creditors. It is certainly a very unfortunate conclusion of a long business experience and a life of hard work. A side venture in the brick business is partly responsible for present conditions.

Mrs. E. F. Winterston has been confined to her home by illness for some time and seems to make little progress toward restoration to her usual good health.

Bowling.

The third series in the league contest was played last Tuesday evening and the scores follow. Some very remarkable spares were made by Ed Winterston, Chas Balluff and Geo. Assmus that drew unanimous applause from professional spectators. In these games the Wholesalers won from the Retailers and the Growers took a heavy fall out of the Seedsmen. None of these dollar prizes for 200 scores were won, though G. Stollery came within one pin of one.

ST. LOUIS.

The Market.

There is little change in the trade since my last writing. Stock is as plentiful as ever and the prices are still going down; the quality is poor on account of the warm weather. The cut of roses and carnations during the past month has been enormous.

In roses the best Meteors, Brides and Maids are sold at \$3 per 100, and from that down to \$1. Only a very few choice ones are now coming in and the second grade stock is very plentiful and about at your own price.

Carnations are still very fine and of good color. White and Daybreak are about the best sellers; of the other varieties, plenty are going to waste. Price of fancies is \$1.50 per 100; good stock, \$1, and common grades, 50 cents per 100. All can be bought cheaper in 1000 lots.

Paeonies are coming in now and are sold from \$4 to \$5. Dark red are the only ones in at this writing. Sweet peas are good in quality and color and are bringing from 50 cents down to 25 cents per 100. Cornflowers, at 25 cents per 100, have little call, though very good. Good valley brings \$3, but is not plentiful.

It is said that Decoration Day prices will go into effect May 27, but if the stock is as plentiful as it is at present, prices will not go up much.

St. Louis Free From Fakirs.

May of Wells has done a good thing for the legitimate florists who pay store rent. He has ordered all fakirs kept off the streets and we are now free from the class that call themselves "street florists." Though this is not to the liking of the wholesalers, who now has no outlet for his surplus, I think it will benefit all three—the grower, retailer and wholesaler alike. Now the grower who sends in rubbish will get nothing for it, while for those who send in first class stock the wholesaler will be able to dispose of all of it at a good fair price, and the retailer will be able to charge a good price for his stock over the counter. I think we have all gained much by the action of the mayor, and a vote of thanks should be sent him for his good work in this direction.

No doubt the Florists' Club will take the matter up at its next regular meeting, and we hope that every member of our club will attend this meeting, if only to sign his name to the vote of thanks.

Now that the St. Louis florists are rid of the fakir on the street, the next question to be taken up is the "rape-puller," with which we are now overrun. This crappalling has been practiced of late by some firms that we thought were our best. Some of these "pullers" offer to make a twenty-two-inch pillow for \$2, and enough cut flowers for the inside of the basket thrown in. A florist of our city has in his possession a bunch of cards left by various florists at the home of a friend, who had lost his mother, and it was a great surprise to read the names of florists whom we least expected would stoop to the low practice of "rape-pulling," and their names should be read before the Florists' Club at the June meeting. Many of these "rape-pullers" buy second-hand wire work gathered from the cemeteries. This matter should also be taken up and stopped, if possible, as the officials of the different cemeteries throughout the city don't seem to know that the stuff is being sold and the money pocketed by the help.

Various Items.

Arthur Blome was in town last week selling the famous Nephrolepis Witboldii for the George Witbold Company, of Chicago. Mr. Blome reports great sales on this plant.

Carver Sanders has been confined to his bed with sickness the past week. From last reports he was improving and expects to be out in a week or so.

Arnold Scheidegger, of Kirkwood, is building two new houses, and Hugo Gross, of the same place, is building three new houses, all to be 25x100. They grow only violets and carnations for the trade.

W. E. Jordan, successor to the Jordan Floral Company, on Easton avenue, has the place in good shape for the planting season. Business of late has been good; he is selling a good deal of his stock at wholesale. Willie is assisted in the business by his wife.

F. C. Weber celebrated his fifty-fourth birthday anniversary last Monday night at his home, entertaining his entire club. The affair passed off in a very pleasant way.

Charlie Kuehn and Arthur Ellison are

members of the Brunswick Bowling Club and are playing in a summer league in which their club is in the lead. Both are doing some fine bowling.

A recent visit to George Wandler's place, on Delone avenue, found the place looking in fine shape. George and his brother were hard at work. Great credit must be given these young men for their earnest endeavor to make their place a paying one.

Mr. Wm. Bonche has just finished the flower beds in front of the union station and the flower boxes around the road garden. The place looks better than ever before.

The flower stands in the Union market are in full bloom and attract a great deal of attention from the great crowds that daily throng this place. Business here is very active and all varieties are meeting with ready sale.

Shaw Banquet.

The twelfth annual banquet to the trustees of the Missouri Botanical Garden was given at the Southern Hotel on last Saturday night. The sum of \$1,000 is annually set apart in the will of the late Henry Shaw to defray the expenses. Fifty-five guests were present, including the members of the board of trustees.

Dr. E. A. Engler was toast-master and the following gentlemen spoke: Mr. Henry Hitchcock, Prof. Calvin M. Woodruff, Mayor Rolla Wells, Isaac H. Lionberger, Mr. Herman von Schreben, and Dr. C. H. Patton. The decorations were elaborate and tastefully arranged.

Yesterday (Sunday) the Shaw flower sermon was preached at Christ Church. The church was tastefully decorated with plants from the Shaw garden. This is an annual sermon which is in accordance with the will of the late Henry Shaw.

Bowling.

The attendance at the last meeting of the bowling club was better and the members, from now on will come down more regular and try to put up some good scores in order to improve. Last night at Buffalo this summer, and if we can get the team together, we expect to make them all hustle to win out. The scores last night were somewhat better than the last, but not what they should be. The scores were as follows:

	1	2	3	4	Total	Average
A. Y. Ellison	175	168	141	172	656	164
F. J. Becker	169	163	157	176	665	166
J. W. Kutz	175	169	144	159	647	162
F. A. Kuehn	178	164	155	141	638	159
F. S. Ellis	175	163	151	157	646	161
W. H. Adels	178	174	151	157	660	165
F. C. Weber	175	171	155	152	655	163
John Young	169	168	145	152	634	158

J. J. B.

SAN FRANCISCO.

The Market.

Business has been fair this week and cut flowers were never so plentiful before. Carnations can hardly be given away and were never so cheap as the present time. Good inside roses still command a good price, but are somewhat scarce.

President McKinley and party are with us and are being entertained in true California style. The cheap florists got the decorations of the city and made a cheap job of it.

Prices.

Prices: American Beauties, 50 cents to \$2; Brides, Maids, Meteors, 15 to 30 cents; Cecil Bunnies, 61 cents; Carnots, 15 to 25 cents; Kaisersins, 25 to 75 cents; Siebrechts, 15 to 25 cents. Carnations—Hobart, 81; Crocker, 25 to 50 cents;

Domato Bros., Fruitvale, all sizes, 20 to 25 cents; Nugget, 25 cents; etc.; 15 to 16 cents per doz.; Pomona, 30 to 75 cents per 100; Harris, 81 to 82; sweet peas, 30 to 75 cents per doz.; smilax, 5 cents; sparagans, 10 cents per string.

Trade Notes.

Domato Bros., Fruitvale, all sizes, 20 to 25 cents; Nugget, 25 cents; etc.; 15 to 16 cents per doz.; Pomona, 30 to 75 cents per 100; Harris, 81 to 82; sweet peas, 30 to 75 cents per doz.; smilax, 5 cents; sparagans, 10 cents per string.

E. Gill, Oakland, has received some very large shipping orders for cut flowers for Decoration Day.

Wm. Nannenmacher, Piedmont, received a new addition to his family on May 6. Billy says it's a girl. I wonder if he is sure.

Kiyow & Co., San Francisco, will grow 5,000 chrysanthemums, Queen and Bonadonna, this year. This firm is bringing in some very fine lilies at present.

State Exhibition.

The California State Floral Society held its spring exhibition on May 16, 17 and 18 in the northern end of the Ferry building, San Francisco. The show was a splendid success in every way. Although not quite up to former exhibitions in the number of exhibits, the excellence of the various displays was certainly ahead of anything ever seen in San Francisco.

The carnation exhibit made by John H. Sievers & Co. was simply wonderful and it was well worth the price of admission alone to see what can be accomplished in carnation culture. Six new seedlings shown by this firm were of the Hobart type: Mrs. F. Carlton, a very fine shell pink with a splendid calyx; No. 11, a fine scarlet; R. Raymond, salmon pink; Jennie Gifford, rose; Mrs. McKinley, a beautiful dark pink; A. B. Spreckels, a beautiful red. The above six carnations took first premium for best six varieties.

The Golden Gate Park made a fine display of caladiums, not for competition, that were much admired.

Cox Seed & Plant Co., 1st premium for potted and boxed decorative plants. This was a fine exhibit.

Domato Bros., 1st premium for best pair palms; 1st premium for best pair aspidistras.

C. C. Abrams, Western Nursery, potted palms and pansies not for competition.

F. Ludemann made a fine exhibit of palms, Boston ferns and Pandanus Veitchii, not for competition.

R. Spreckels, 1st premium for pelargoniums and best six carnations.

Berkeley University exhibited glorioles, not for competition.

Domato Bros., 1st premium for best twenty-five decorative plants; 1st premium for variegated foliage plants.

E. Gill, 1st premium for largest and best collection of outside roses. Special premium for display of new seedling roses. First premium for cut sprays of flowering shrubbery and ornamental trees. The exhibit was much admired by the public.

Wm. Chandler, 1st premium for wild flowers.

Wm. Stehan, 1st premium for cut flowers, mixed roses, cinerarias and cacti.

James Bell, Berkeley, outside roses, not for competition.

H. Melde, Enreka, wild azaleas. This exhibit was very attractive.

Mrs. Fenton, delphiniums, not for competition.

Luther Burbank, Shasta daisies, colum-

lines, dicentras, calceolarias, not for competition.

F. A. Miller, collection of potted plants, ferns, spiraea, aurantiaca, palms and dracaenas.

C. C. Morse & Co., 1st premium for sweet peas, a splendid exhibit.

Pick & Fisher, University Mount, made a very fine display of carnations, new and standard sorts.

F. A. Carlson, thyme in pots.

J. C. Love, 1st premium for best six ferns.

J. A. Carbone, Berkeley, 1st premiums for Lilium Harrisii, for largest and best collection of inside roses and for six best roses in six varieties.

D. O. Mills, Millbrae, 1st premium for American Beauties.

F. A. Miller, special premium for pansies.

Redondo Floral Co., special premium for seedling carnation.

Mrs. Tricon, 1st premium for cacti.

J. H. Stevers & Co., 1st premiums for largest and best collection of carnations, for best twelve carnations (won with H. Hohart), for largest collection of pelargoniums and for best six carnations.

E. Scherwin made a splendid display of pot-grown ferns that were much admired. Also Bougainvillea glabra.

Frank Pellicani & Co., 1st premium for best rose exhibit and 1st premium for rose and carnation. This exhibit made a very fine table.

J. N.

KEEP THEM GOING.

One step won't take you very far—you've got to keep on walking.
One word won't tell folks who you are—you've got to keep on talking.
One inch won't grow you very tall—you've got to keep on growing.
One little "set" won't do it all—you've got to keep them going.

—Juliet Republican.

RICHMOND, IND.—Mr. Vernon Graves, one of our leading florists, had the misfortune to have a fire at his home May 11. The barn on the premises took fire from some unknown cause and was completely destroyed, together with the contents. One horse and a cow were cremated and a second horse was so badly burned that he was killed. Four or five tons of hay, seventy-five bushels of corn and other material of this character was burned. A large quantity of prepared lumber for new greenhouses in process of construction had been stored in the barn temporarily and this was also destroyed. The loss will probably be between \$1,000 and \$1,200; partly covered by insurance.

MUNCIE, IND.—Fred W. Meyer, formerly of Richmond, Ind., has purchased the greenhouses and business of George Kendall and will continue it. Mr. Kendall retires from business owing to poor health.

BENNINGTON, VT.—W. G. Richardson has sold his stock and leased his greenhouses to L. C. Holton.

SALT LAKE CITY, UTAH.—The Huddart Floral Co. is arranging to build a new house and to rebuild two old ones.

Hunt's Superior LILY OF THE VALLEY.

Very choice quality of stock and foliage.

\$3.00 per 100.

By a thoroughly up-to-date young man, 33 years of age.
A Decorator and Designer second to none, with best references in the country, wants a permanent position.
Address Salesman, care Florists' Review.

CINCINNATI.

Trade and Personal Notes.

A little rain has at last relieved the dry spell and all outdoor stock looks much refreshed. Hardy flowers, snow balls, etc., are in full force, and it is but the hope of the florist that they will be over before Decoration Day. There was a pretty heavy frost the first of last week, but it did no damage. The nights have been very cool and carnations have been benefited.

Decoration Day is growing more and more to be a first class day with the florists, especially when outdoor flowers are over. This year the prospects are especially good. The glut of carnations, which has been with us for nearly two weeks, will be over and first-class prices will be realized. Roses, although poor, will be in fair supply.

The past week has seen a slight reduction in the amount of stock coming in, but there was still more than enough and prices showed very little tendency to rise until Saturday, when they stiffened slightly.

Saturday afternoon the Jabez Elliott flower market was loaded with flowers and plants. The sale of plants was especially good and all the boys are kept busy bedding. Well-flowered geraniums are scarce.

Mr. R. A. Murphy is just recovering from a broken rib and dislocated shoulder. He fell from a scaffold, striking a barrel which was standing beneath.

Mrs. Henry Schwarz has been very sick, but is now slowly recovering. Mr. Schwarz is about to move his establishment from Price Hill to Norwood, where he has purchased grounds. He is building a residence and will erect a range of houses there during the early summer.

Mrs. Lodder and Miss Mary Lodder, of Hamilton, O., are spending a few weeks at West Baden, Ind.

Mr. Oliver Murphy has left the employ of his mother, Mrs. R. J. Murphy, and is with Klus Bros., Anderson, Ind.

Mr. Sidney Murphy has dissolved partnership with Mrs. R. J. Murphy and will start up for himself. He belongs to the rising generation and we all wish him the best of fortune, especially since it is rumored that he will shortly take a partner, and a life partner, too.

Friday evening Mr. Herman Schlachter, wishing to get some flowers from his cellar, discovered that some thieves had pried open the door and made a clean sweep, taking everything in sight, even to a half-dozen potted roses. As they were his stock for Saturday's market, Mr. Schlachter felt the loss considerably.

Mr. William G. Bertermann, president-elect of the American Carnation Society, was in this city Saturday evening on his way to Indianapolis from Washington, D. C., where he had attended the meeting of the S. A. F. O. H. committee on incorporation. He reports that everything was working smoothly. The proposed amalgamation of the leading national florists' societies under one head was discussed.

In speaking of the coming meeting of the Carnation Society, Mr. Bertermann is very enthusiastic. He promises great things and thinks that the West will have a few things to show that will open the eyes of the Eastern florists.

BANANAS.

Bananas planted now at the north grow 8 or 10 feet high by winter, when they can be dug, placed in cellar until spring. Then re-plant and they begin at once to grow, and produce an indescribably beautiful bloom, which lasts 4 to 6 weeks, and is sometimes followed by regular bunch of bananas. They are the most beautiful in appearance and yet the most easily and quickly grown of all plants. To reduce surplus for next 30 days, mail good bulbs for 5c, doz. for \$1.00. South Florida Nursery Co., Dade City, Fla.

IT PAYS.

Some one has suggested that "with customary American extravagance, home gardening is approaching a luxury the world has never known before." Magazine editors, keen judges of public interest, have sought out a splendid array of lavishly illustrated articles on gardening, outdoor topics, and home decoration, both exterior and interior.

The widespread growth of interest in the movement for town and neighborhood improvement has been one of the notable developments of the last decade, and public beauty will doubtless be the dominating idea of the twentieth century. Many of our social problems are in large degree questions of environment, and hence the attainment of more salutary conditions in this connection will greatly simplify their solution.

The National League of Improvement Associations was formed to meet the growing general demand for information concerning organized effort for the promotion of home beautifying. Its history has been marked by a nation-wide increase of interest in public beauty and by an unprecedented large business on the part of those who have for sale that which will assist in making America "the most beautiful country in the world."

Organized purely as an educational movement the League has proved a decidedly successful business "boomer." Already special campaigning in a given city has resulted in the sale of the entire stock of every local florist. The League plans, agitates and organizes. It unites newspapers, school people and influential citizens in a way that awakens interest in every home. This interest causes a demand for plants, seeds, bulbs and supplies.

To get "trade" the League is an investment, not a charity, and a proposi-

tion to support it is purely a business matter. An organization formed for similar purposes among manufacturers is largely supported by prominent firms whose efforts are thus brought to the attention of an interested public. The suggestion, then, is offered to the reader—that in common with some hundreds of seedsmen, florists, nurserymen and supply dealers, they unite in sending subscriptions toward the financial support of the League. Without doubt these amounts may, if need be, be made payable in two installments.

Acting as your agent the League invests in a national campaign of education and agitation. To this end the League prepares booklet, magazine and leaflet issues; provides lectures and lantern slides for towns and assemblies; secures the organization of local leagues, and the enlistment of commercial bodies and public spirited citizens. This varied effort results in hundreds of press articles, scores of meetings and lectures, and dozens of active societies, all working together to create new demands for your stock. "It pays" one business man says.

Expanded by the League in this fashion your money nets several hundred per cent more of profitable publicity than you can secure by any direct method. Every dollar invested increases the dividends of every dollar put in. Hence it is to the advantage of all concerned to have the co-operation of the entire trade in your city. Will you not urge them to join with you? Now is the seed time for the early harvest.

E. G. RUTZAHN, Sec'y,
Springfield, O.

THE BEST.

We consider the REVIEW the best advertising medium and the newestest paper published for the trade.—GEO. M. KELTONE, Pleasant Hill, Mo.

HELENA, MOBE.—S. K. Gibbs has leased the Wells Conservatories for five years, taking possession March 1 last. There are six houses, averaging 14x60, and several will be devoted to roses and carnations for cut flowers.

ONE DOLLAR will bring the REVIEW to you every week for a year. Fifty-two numbers—less than 2 cents a week.

IF YOU don't find what you want in our classified ads, let us know about it. We will find it for you if it is to be had.

THE REVIEW's classified ads. are a great convenience, is the verdict of the buyers. "It is so easy to find what you want."

IF YOU don't find what you want in our classified ads, let us know and we will ascertain for you where you may get it.

If you want a position and you are a subscriber to the Review you can have a 35 word want adv. free one week. Extra insertions at the rate of 1 cent a word.

"IF IN DOUBT," consult the Florists' Manual, by Wm. Scott. It covers the whole field of commercial floriculture and you can quickly find in it the experience of a practical man bearing upon the doubtful point.

American Beauties and Valley Our Specialties. 1612-14-16-18 Ludlow St., Philadelphia, Pa.

Mention The Review when you write.

SPRINGFIELD, MASS.

There is very little special decorating done here on Decoration Day. The Grand Army posts take care of the soldiers' graves with flowers and wreaths which they make themselves.

The principal decoration that we do is for the militia, for their past officers, who have gone, for which we make up large shaw designs each year. They have no special design, varying them each year. Outside of that our trade runs mostly to simple basket work and loose cut flowers, except in a very few cases when we have had to make huge bunches to cover the entire graves. These have been made sometimes of large hydrangea blooms, others have been made of lilies, some roses, etc., but usually of the larger and more effective flowers. M. A.

RICHMOND, VA.

Decoration Day is not what it was formerly to the florists here. In times past they worked all the preceding night and day and goes and leaves no impression on the bank accounts, except with one or two of the largest plant growers. They do the most trade and Decoration Day about cleans up the "soft stuff," as they term it. Oakwood memorial has come and gone and it is doubtful if as much as \$300 was spent with florists. May 30 is the next and biggest day. The florists hope it may be an improvement over past years, but from a cut flower standpoint it cuts little figure. O.

ATLANTA, GA.—John A. Lambert, who organized the Lambert Floral Co. last October and who withdrew from that concern last January, has re-established himself in the business at 60 Cherokee street, and is completing a range of 6,500 square feet of glass. Beginning June 1 the business will be conducted by Lambert Bros., John A. and Wm. J. Lambert, proprietors. Mr. Lambert is now engaged in securing an injunction to prevent the old concern from using his name in its title.

SHERMANTOWN, Pa.—John F. Rupp is arranging to attend the Buffalo convention and will be accompanied by his wife and son.

IN "The Land of Sunshine" for April there appears an interesting illustrated article on bulb growing in California by Charles Howard Shim.

HIGHBRIDGE, N. Y.—The body of 12-year-old Willie McCormick, son of W. G. McCormick, who disappeared from his home six weeks ago, was discovered May 11 floating in a creek.

CHATTANOOGA, TENN.—The flower parade on May 7 was a brilliant success, many of the floats being of remarkable beauty.

YOU WILL find all the best offers all the time in our classified ads.

Nephrolepis Wittboldii

AT the left is a plant of *N. Wittboldii* lifted from the bench.

After being photographed 40 runners were taken from this plant and potted up. It is even more prolific than the well-known Boston fern. It has not only greatly added beauty and grace but possesses every characteristic necessary to make it a money maker for the small as well as large grower. It produces with remarkable freedom, grows quickly into a fine specimen and as a house plant is fully as tough and lasting as *N. Bostoniensis*.

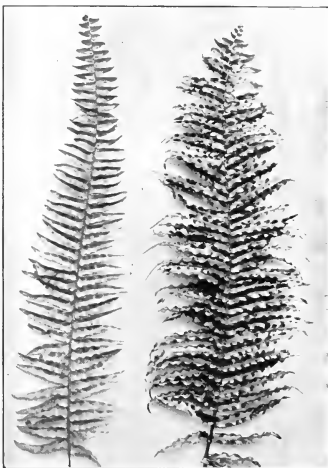

**YOU NEED IT IN
YOUR BUSINESS.**

REMEMBER we are not sending out weak, puny plants, but **Strong Vigorous Stock that will immediately produce runners if planted out in bench.**

We are offering fine plants, ready for 3 and 4-inch pots at **\$1.00 each, \$10.00 per doz., \$75.00 per 100.** The demand will be immense next year and you ought to have a stock ready.

BUFFALO HOTELS.

The Buffalo Florists' Club have undertaken to arrange for the accommodation of all visitors who expect to attend the convention of the S. A. F. in Buffalo.

While it is true that hotel rates will be higher than usual, there are any number of apartment houses that have been fitted out for the accommodation of Pan-American visitors; also private houses in the residence portion of the city, where rooms can be had for \$1 and up for each person, and in many breakfast will be served if desired, while other places will give all meals, the latter not so plentiful.

The hotel committee have a list of houses and hotels with low rates, and any person or persons wishing to engage rooms can have same secured in advance by addressing the chairman of the committee, W. A. Adams, 419 Main street, Buffalo, N. Y., stating whether they want accommodations at hotel, apartment or private house, with or without breakfast, and the number of persons desiring accommodations together. It will be necessary to inform the committee early, as they have the refusal of several apartments for the week, where from one hundred to one hundred and fifty can be accommodated in one place.

It will be unnecessary to communicate with W. J. Stewart, secretary of the S. A. F., as the executive committee look to the Buffalo Club to accommodate the visitors, when the hotel committee are willing to do providing they are notified in time.

Street car facilities are excellent, the restaurants plentiful and rates reasonable. No one will be overcharged at any place, and with the above desirable amenities and private houses every one will be taken care of if they notify the committee in time.

THE COMMITTEE.

CHICAGO TO BUFFALO.

The Chicago Florists' Club has instructed the committee appointed to arrange for transportation to the convention of the Society of American Florists at Buffalo next August, to issue an announcement to the members of the S. A. F. in general that it hopes to secure especially advantageous terms and accommodations this year and that the larger the party the better the chances of securing the greatest consideration from the transportation lines.

The annual convention of the S. A. F. and the Pan-American Exposition combined will no doubt prove a great drawing card and the attendance will unquestionably be large. If it could be known definitely in advance just about how many will compose the party from Chicago, so the committee could name an approximate number with some degree of certainty, it would materially strengthen them in their efforts to secure the largest possible concessions.

Will you therefore notify the committee—First—Whether you are reasonably certain of attending the convention and intend traveling with the club's special party?

Second—Whether you hope to join the party but are uncertain of being able to do so?

Third—Whether you have made up your mind that you cannot attend this year?

Please address reply to any one of the committee as below.

Poinsettia Pulcherrima.

The Favorite Christmas Plant.

STRONG SPRING STRUCK PLANTS, from 2 1/2-inch pots, \$8.00 per hundred.
Ready June 15th.

These will make the largest plants. Later propagated will be equally as useful. Poinsettia will not endure any disturbance of the roots when large, so start with small healthy plants.

GRAND RAPIDS, MICH.

Various Items.

The unsettled condition of the weather is becoming very disheartening; not satisfied with being cold and raw, last Saturday it commenced to rain and is still raining, with rain predicted for tomorrow, Wednesday, a day set for a society outdoor lily wedding. Peter Kunst who has the bedding plants, vases, etc., in charge has this part of the work completed, while Crabb & Hunter have the wedding decorations, and now it looks as if all things movable will have to come indoors.

The death of Edwin F. Uhl, ex-mayor, ex-ambassador to Italy, etc., furnished the occasion for a lavish use of flowers. The Floral Company had the family order, while every florist had a share of the designs and sprays, making this the largest floral funeral of the season.

Flowers are very plentiful, a few roses, seconds, even going to waste; but so far carnations have been pretty well cleaned up, and if this weather continues a few days longer there will be a scarcity for Decoration Day, as usual. Lilies will be gone, as well as most flowering shrubs except snowballs and paeonies. Most of the florists have grown a few longiflorums for Decoration Day to help out, and it looks as though they will come in handy. Carnations are 35 cents per dozen; roses, \$1; outside valley, 50 cents per doz.; longiflorums, \$1.25 per doz.; lilies, 25 cents per doz.; bulbs all gone.

James Schols is now improving rapidly and hopes to be able to be about in a few days.

Eli Cross has one of the finest crops of members ever seen in this section.

The wedding of the season was the Barstow-Phelps. Crabb & Hunter had both the church and the home decorations and they were the most elaborate ever seen in Grand Rapids.

Our visitors this week were Mr. Minnie, of Eaton Rapids, Mich., and the Knapp Bros., of St. Johns, Mich.

G. F. C.

MILWAUKEE.

Business was unusually quiet when it should have been brisk, considering the quantity of stock on the market. Sales were slow and it was difficult to obtain respectable prices, even on fine stock, probably due to the immense variety of stock on hand and the large percentage of seconds and culls. Country buyers must also have their crops on, for shipping business is somewhat unsteady. Carnations went anywhere from 50 cents to \$2 per 100, but good stock lingered around the \$1 mark most of the week. Roses ranged from \$1 to \$6 per 100, but only extra select brought top price. White stock was the weakest on the market, calls being for colored mostly. Decoration Day trade will retrieve the present state, as advance orders are coming in lively.

C. C. P.
